JANUARY, 1936

[NUMBER 1°

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**E**MPLOYMENT at the beginning of December, 1935, showed a seasonal recession, which was the first general decline indicated since April 1. The reduction rather exceeded the average contraction indicated between November 1 and December 1 in the experience of the years since 1920, but the situation continued decidedly more favourable than in any month of 1934, 1933 or 1932, being also better than in the autumn and early winter of 1931. The Dominion Bureau of Statistics tabulated reports from 9,462 employers, whose payrolls were reduced from 1,013,721 at the beginning of November to 985,155 on December 1, 1935. The index (average 1926=100) declined from 107.7 on the former date to 104.6 on December 1, as compared with 98.9 at the same date in 1934. On December 1 in the thirteen preceding years, the index was as follows: 1933, 91.8; 1932, 83.2; 1931, 99.1; 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 108.1; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3.

At the beginning of December, 1935, the unemployment percentage reported to the Department of Labour by local trade unions throughout Canada was 13.3, the same percentage as was recorded at the beginning of November, 1935, while at the beginning of December, 1934, the percentage stood at 17.5. The December percentage was based on the returns furnished by 1,761 labour organizations, combining a membership of 169,584 persons.

Reports received during November, 1935, from the Offices of the Employment Service of Canada showed a decline from October and also from November a year ago in the average daily placements effected. This was largely due to curtailment in the various municipal and provincial relief works in progress throughout the Dominion. Vacancies in November, 1935, numbered 32,196, applications 65,033 and there were 30,835 placements in regular and casual employment.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and

rent at the beginning of December, 1935, was \$16.65 as compared with \$16.54 for November. The increase was due mainly to the higher cost of foods, chiefly eggs, butter and potatoes. Comparative figures for certain earlier dates are \$16.02 for December, 1934; \$15.41 for June, 1933 (the low point in recent years); \$22.11 for December, 1929; \$21.49 for December, 1921; \$26.92 for July, 1920 (the post-war peak); and \$14.26 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 72.6 for December, 1935, as compared with 72.7 in November; 71.1 for December, 1934; 63.5 for February, 1933 (the low point in recent years); 96.0 for December, 1929; 97.9 for December, 1926; 96.4 for December, 1921; 164.3 for May, 1920 (the post-war peak); and 66.4 for December, 1914.

The table on page 2 gives the latest information available reflecting industrial conditions in Canada. The index of the physical volume of business was 110.0 in November, 1935, as compared with 107.2 in the previous month and 96.5 in November, 1934. Of the principal factors in the index those used as indicators of manufacturing and of imports were substantially higher in November than in October, while there were small increases in electric power output and in trade employment. The factors showing declines were mineral production, construction, car loadings and exports. All of the above factors were higher in November, 1935, than in November, 1934, except construction. Information available for December, 1935, shows a seasonal fall in employment and in car loadings as compared with November but both were higher than in December, 1934. Contracts awarded showed decreases from the figures of the previous month and from those of December, 1934. Sugar manufactured during the four weeks ending November 30, 1935, was higher than in the previous four weeks and higher also than the corresponding period in 1934.

During December there were on record eight strikes and lockouts involving 1,745 workers and causing a time loss of 5,718 man working days, as compared with thirteen disputes in

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending December 28, 1935 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending November 30 November 2 and October 5, 1935; December 1, November 3 and October 6, 1934.

(7) MacLean's Building Review.

November involving 2,133 workers with a time loss of 24,733 days. Most of the time loss during both November and December was due to two strikes of longshoremen and other water transport workers in Vancouver, B.C., beginning in June, which terminated on December 9. In December, 1934, there were eight disputes involving 340 workers with a time loss of 1,875 days, none of which involved a large number of workers. Of the eight disputes in December, seven were recorded as terminated, four resulting in favour of the employers concerned, one in favour of the workers involved, a compromise settlement being reached in one case while the result of one dispute was recorded as indefinite. One dispute was recorded as un-terminated at the end of the month and involved some fifty workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act**

During the past month the Department received reports of Boards of Investigation and Conciliation appointed in connection with two disputes, viz.—the Winnipeg Electric Company and certain of its employees; and the Canadian Collieries (Dunsmuir) Ltd., and certain of its employees. A Board was established to deal with a dispute between the Hamilton Street Railway Company and its employees, while an application for the establishment of a Board was received from employees of the Lethbridge Collieries Limited.

#### **Supplements published with this issue of Labour Gazette**

Two supplements will appear shortly after this issue of the LABOUR GAZETTE, continuing the series on wages and on prices issued annually in January in recent years. The first is the nineteenth report in the "Wages and Hours of Labour" series giving information as to the year 1935, with comparative figures for 1934 and earlier years, and showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the movement in retail and wholesale prices in Canada in 1935 and previous years; tables are also given showing the movement of prices in other countries throughout the world.

#### **New Year's Message of Minister of Labour**

The following New Year's message was issued by the Hon. Norman McL. Rogers, Minister of Labour:—

"As Minister of Labour, I feel that any message I

have to give to the Canadian people at the beginning of this new year should deal with the efforts which are being made to promote the increase of employment and to provide as effectually as possible for the necessities of unemployment relief.

"Your Government considers that 'unemployment is Canada's most urgent national problem.' Therefore, let me say at once that no time has been lost in organizing a national co-operative effort for the control of relief where it is still needed, and to bring about a revival of domestic industrial activity and of commercial intercourse with other countries.

"At the recent Dominion-Provincial Conference the proposal to establish a National Commission on Employment and Relief received unanimous endorsement and steps are now being taken for the constitution of this body. The conference advised that the duties of the National Commission should comprise a registration and classification of all persons on relief who are capable of self-supporting work; the co-ordination of public works programs and employment policies on a long-range basis; the formulation of plans, in consultation with industry and commerce, whereby the latter will make year-round provision for their essential quotas of work-people and for the increase of employment; the devising of a system for the training of young people for employment, including apprenticeship; and to supervise the distribution of all funds voted by Parliament for the purposes of employment and relief. Pending the setting up of this National Commission, the Dominion Government has made substantial increases in the federal grants to the several provinces for relief purposes so as to ease the heavy burden which has been borne by the municipalities during the past five years.

"It is of vital importance that public and private enterprise should be so organized during the coming year as to bring about a steady diminution of direct relief. I cannot believe that any large proportion of our people will be satisfied to accept relief as a substitute for employment. While recognizing the responsibility of public authorities to assist in the care of those in need, the Government is convinced that recovery can be brought about only through the restoration of normal trading activity in the fields of domestic and foreign commerce. The Reciprocity

Agreement with the United States and the termination of the trade dispute with Japan will contribute materially to the realization of this purpose.

"It is a matter of gratification to be able to state, on the authority of official returns made to the Dominion Government, that the total volume of employment in Canada as a whole was greater in the year now drawn to a close than has been the case in any other year since 1930. Official statistics show also that within recent months trade and industrial conditions are substantially better than was the case a year ago. This is true both of export and import trade, which have increased by eight and twelve per cent respectively, and applies as well to building and construction, mineral production and manufacturing in general. In the light of this evidence there is definite ground for believing that the period of depression is drawing to a close and that progress is being made towards the long-desired recovery.

"May I add that the Government will not lose sight of two paramount considerations in formulating policies to meet the emergent conditions of to-day. No Government is omnipotent; no Government can restore prosperity by any process of legislative magic. Within its proper limits, however, a Government may mobilize and direct the human and material resources of the nation; it may also provide leadership in the restoration of confidence, in the revival of trade, and in the removal of obstacles to economic and social progress. Already the present Administration has taken steps in this direction, and towards a common end it has enlisted the support of the various Provincial Governments. It is my sincere conviction that such measures will assist in the realization of the wish I extend to every Canadian—a New Year of more substantial hopes and more secure happiness for our country."

#### **New Year's Messages of Labour Leaders**

Canadian Labour leaders surveyed the economic situation, both retrospective and prospective, in the New Year's messages.

Mr. P. M. Draper, president of the Trades and Labour Congress of Canada, commended the proposal to appoint a national commission to advise on employment and unemployment, and pointed to the "necessity of definite planning" to cope with this major problem. He also viewed with "grave concern the spread of dictatorship in Europe together with the threat of what dictatorships must inevitably lead to." In this respect, he declared that the labour movement was ready to co-

operate "with all other men of good will to bring about a state of society" outlawing war.

The clouded international situation was also referred to by Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, as one of the outstanding obstacles to social and economic reconstruction. While asserting that no one nation alone can cure a world-wide condition, he expressed the belief that "through the economic and political power which labour organization can develop, and by means of the education of the workers in social and economic principles, there will be constantly increasing force directed to the task of reconstructing the industrial system."

In spite of the recurring menace of war and obstacles and reverses, he considered that there is "a deep but unmistakable tide moving towards a better future."

The General President of the Confederation of Catholic Workers of Canada, Mr. Alfred Charpentier, declared that 1935 has shown little improvement over the four previous years for the mass of the workers. "A more equitable distribution of wealth," he said, "is the best cure for unemployment," adding that "the workers' salvation is in a method of labour organization which, with the help of a financial legislation based on Christian teachings, would regulate production, increase labour's share in the proceeds of industry and extend the field of employment and social welfare."

#### **Mining accidents in Ontario in 1934**

According to a report on mining accidents in Ontario in 1934 recently issued by the Provincial Department of Mines (Bulletin No. 97)

there was an increase both in the total number of accidents and in the number of fatalities recorded. The proportion was 1.61 for 1934; 1.57 for 1933; 1.69 for 1932; 2.03 for 1931; 3.02 for 1930 and 2.89 for 1929. It is reported that during 1934, at the mines, metallurgical works, quarries and clay, sand and gravel pits regulated by the Provincial Mining Act, there were 1,945 accidents reported up to January 16, 1935. Thirty-three fatalities arising out of 32 separate accidents were reported. These returns represent an increase of 407 in the total number of accidents and an increase of 8 in the number of fatalities recorded for the previous year. There were 93 non-fatal accidents per thousand men employed, which is a decrease of 2 per thousand from the rate of 1933. The percentage of non-fatal accidents followed by infection decreased from 7.3 in 1933 to 7.1 in 1934. Of the 33 fatalities during the year, 18 were in gold mines, 7 in nickel mines, 5 in metallur-

gical works, 1 in quarries and 2 in sand, gravel and clay pits.

The report analyzes the causes of both fatal and non-fatal accidents, giving full particulars in regard to each fatality.

#### **Health Insurance Committee of British Columbia**

The report of the Hearings Committee on Health Insurance for British Columbia has recently been published by the Department of the Provincial Secretary.

(The draft bill on health insurance introduced in the British Columbia Legislature to form a basis of discussion from which a measure might be formulated, was referred to in the LABOUR GAZETTE for May, page 394.) The recommendations involve suggested taxation on provincial payrolls and employees incomes in a scheme of provincially supervised health insurance under a Commission and an advisory council. Details of the report will be published in next month's issue.

#### **Housing and Slum Clearance in Great Britain**

The departmental committee on housing appointed in 1933 in Great Britain (LABOUR GAZETTE), June, 1934, page 497) recently published the third of a series of half

yearly returns showing the progress in housing in England and Wales, for the period up to September 30, 1935.

The report shows that at the date of the Armistice the number of houses in England and Wales was a little under 8,000,000. Between that date and September 30, 1935, 2,804,888\* new houses were provided, 830,509 by local authorities and 1,974,379 by private enterprise.

The total number of houses provided in the year ending September 30, 1935, was 316,365 which is 2,937 in excess of the number provided in the previous year.

The number of houses provided by private enterprise without state assistance in the half-year ending September 30, 1935, was 125,593, this number being 23,816 less than the record total in the previous half-year. Notwithstanding this decrease the total for the year was 17,256 more than the corresponding total in the previous year, and is a record for any year.

Up to September 30, 1935, there were 7,154 areas declared as clearance areas under the Housing Act, 1930. These areas included 123,585 houses and the number of persons displaced by the demolition of these houses was 527,276.

\*This total excludes 14,776 houses provided to re-house persons displaced under improvement and reconstruction schemes under legislation prior to the Housing Act, 1930.

#### **Workmen's Compensation in the United States**

The movement in the United States towards workmen's compensation through an exclusive state fund as in the Canadian provinces has been steadily promoted by the American Association for Labour Legislation.

At the present time, eighteen states have adopted this method of compensation. At a national conference in October in Asheville, N.C., called by Miss Frances Perkins, United States Secretary of Labour, representatives of state Departments of Labour and of Labour organizations adopted resolutions in favour of a state system of workmen's compensation. The standard program for workmen's compensation which was drawn up and adopted at the Conference and which is very similar to that of the American Association for Labour Legislation is expected to be advanced by an educational campaign under the direction of the recently created Division of Standards of the United States Department of Labour.

#### **Unemployment Insurance in the United States**

At the present time, ten of the American states have adopted an unemployment compensation law designed to take advantage of the unemployment compensa-

tion provisions of the federal Social Security Act passed on August 14, 1935. Oregon is the latest state to enact such a law. In addition to the District of Columbia, the following states had previously passed unemployment compensation laws: Alabama, California, Massachusetts, New Hampshire, New York, North Carolina, Utah, Washington and Wisconsin.

The report of the Minister of Public Works of Canada for the fiscal year ended March 31, 1935, indicates a total expenditure incurred by the Department during that period on its various works of construction, maintenance and operation, of \$16,176,363.85. Of this total \$5,833,720.54 was expended on public building; \$2,396,105.33 on harbour and river works; \$870,899.94 on dredging; and the balance in smaller totals on roads and bridges, telegraphs, civil government, etc. As compared with the total for the fiscal year 1933-34, the expenditure represents an increase of \$5,029,763.21. The revenue for the year amounted to \$427,219.25—an increase of \$79,534.11 as compared with the previous year.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**N application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour on December 13, 1935, from employees of the Lethbridge Collieries, Ltd. The causes of the dispute include the employees' request for recognition of a joint committee of the employees, payment of wages in cash instead of by cheque, and a rotation system of employment; also certain grievances in regard to alleged excessive electric light charges. Six hundred and eighty-four mine workers are said to be directly affected. The western representative of the Department of Labour has been instructed to visit the locality of this dispute at the earliest opportunity, and endeavour by conciliation to effect a settlement of the points at issue, if at all possible, without the necessity of Board procedure.

A Board of Conciliation and Investigation was established by the Minister of Labour on December 16 to deal with a dispute between the Hamilton Street Railway Company and certain of its employees being members of Division 107, Amalgamated Association of Street and Electric Railway Employees of America.

The members of the Board, appointed on the recommendation of the employers and employees, respectively, are: Messrs. John A. Munro, of Hamilton, and Fred Bancroft, of Oakville. These two members are conferring

respecting the chairmanship. The application in this matter was received from the employees on November 1 (*LABOUR GAZETTE*, November, 1935, page 978).

The November issue of the *LABOUR GAZETTE* (page 982) contained the text of the report of the Honourable Mr. Justice H. H. Davis, who, as a Commissioner appointed under the provisions of the Industrial Disputes Investigation Act and the Inquiries Act, conducted an inquiry during September and October into an industrial dispute which had been in existence for some months on the Vancouver waterfront. Immediately subsequent to the closing of the public hearing, Commissioner Davis presided at conferences held between committees representing the Shipping Federation of British Columbia, Ltd., and the Vancouver and District Waterfront Workers' Association. Following these discussions the Shipping Federation submitted certain proposals, which were rejected by the members of the Waterfront Workers' Association, and counter proposals were then drawn up by the latter body. These were not accepted by the Shipping Federation. Negotiations were again reopened at the close of November, but the parties failed to reach an agreement. On December 9 the strike was officially called off by the Vancouver and District Waterfront Workers' Association. It is understood that a large number of the longshoremen who were on strike have applied for reinstatement, many of whom have been re-engaged.

### Report of Board in Dispute Between the Winnipeg Electric Company and Affiliated Companies, and Certain of Their Employees

The Board of Conciliation and Investigation established in September to deal with a dispute concerning wages and working conditions which had arisen between the Winnipeg Electric Company and affiliated companies, and certain of their employees, submitted its findings to the Minister of Labour during December. The companies affiliated with the Winnipeg Electric Company are the Manitoba Power Company, Ltd., the Northwestern Power Company, Ltd., and the Winnipeg, Selkirk and Lake Winnipeg Railway Company. The employees concerned, approximately 100 in number, are members of the Association of Substation and Hydro Plant Employees.

The Board was composed of Mr. Robert Jacob, K.C., of Winnipeg, chairman, appointed by the Minister of Labour on the joint recommendation of the other Board members, Messrs. C. A. Clendenning and R. B. Russell, both of Winnipeg, nominees of the employers and employees respectively. While the report of the Board is signed by all three members, Mr. Russell dissented from the Board's findings in regard to the matter of wages and submitted a minority report on this subject. Attached to the Board's report is a copy of a schedule of hours of labour and working conditions agreed upon between the parties concerned, which the Board recommends should be made effective as from October 1, 1935.

Following is the text of the two reports:

### Report of Board

Re *Industrial Disputes Investigation Act and re differences between the Winnipeg Electric Company, the Manitoba Power Company, the Northwestern Power Company and the Winnipeg, Selkirk and Lake Winnipeg Railway Company, and certain of their employees being members of the Association of Substation and Hydro Plant Employees.*

To the Hon. NORMAN McL. ROGERS,  
Minister of Labour,  
Ottawa.

SIR,—Acting under appointment of the Honourable, the Minister of Labour, and instructions from the Deputy Minister and Registrar, the members of the Board of Conciliation appointed herein were duly sworn and held several sittings to consider the dispute between the companies and certain of their employees.

In all there were fourteen sittings of the Board. At these sittings and also at several informal gatherings with both the men and officers of the companies every effort was made to arrive at an adjustment covering all points in dispute.

The companies named in the preamble are in the business of developing electrical power in hydro electric plants on the Winnipeg River, transmitting such power to Winnipeg and its suburbs and there distributing it for residential and commercial purposes. They are also engaged in urban and inter-urban electric street railway and motor bus transportation, and the manufacture and distribution of gas for domestic and commercial purposes. In operating these utilities about twenty-five hundred (2,500) employees are employed, representing many professions, trades and vocations.

The employees in this dispute are the power house operators and maintenance men living at the three power plants about seventy (70) miles from Winnipeg, the patrolmen on the transmission lines, the substation operators living in Winnipeg, and a few of the men employed in or about the power house or substations as gardeners, bus drivers and handymen.

Nearly all other manual workers in the companies' employ have been for some time organized into unions. The employees in the dispute, however, have only recently organized into a union.

There are approximately one hundred (100) men involved, and the president of their union, under oath, swore the union represented the majority of these men.

Their claims may be divided under two headings:

1. *Working Conditions.*, covering hours of work—arrangement of shifts—promotions—and various other matters affecting the duties of the employees.

2. *Wages.*—There appeared to be an amicable feeling between officials of the companies and the men. There was no mention of unfair treatment or unfair dealings. After seven meetings of the Board an agreement was reached on working conditions which were reduced to writing and accompany this report.

The matter of wages, however, was one requiring further conferences, and, while every effort of the Board was directed towards reaching an agreement, in this it was not successful.

On adjacent sites on the Winnipeg River the City of Winnipeg also owns and operates hydro electric power plants. The City also owns and operates transmission lines connecting these plants and the City, and also operates substations in the City. The operators engaged at these plants and substations receive a higher scale of wages than the men working for the companies. The maintenance men at these plants and the patrolmen receive in many cases approximately the same amount of wages as the companies' men.

The men claim they should receive equal pay for equal work in the district, that is, their wages should be on a par with the employees of the Winnipeg Hydro. The companies on the other hand dispute this and state that they are unable to pay as high wages as the Winnipeg Hydro by reason of the fact that the fixed charges for interest on borrowed capital is much lower with the Winnipeg Hydro than with the companies on account of the security of the City of Winnipeg being much stronger than that of the companies. The companies also claim that political influence has a great deal to do with the fixing of wages by a public body such as the Winnipeg Hydro, and that they simply could not follow them. In addition it was claimed by the officials that the companies' financial position has grown steadily worse in the past five years. No dividends have been paid on preferred or common stock for years and there is now a large sum of bond interest in default. The companies were threatened with receivership and in order to attempt to save the situation a reorganization of its finances is in process and within the course of the next few months will probably be completed. By this reorganization the bond interest rate will be reduced, outstanding obligations also reduced, and the prospects of the companies getting

out of the red will be much brighter. In the meantime, however, any increase in wages was absolutely out of the question and might seriously interfere with the success of the present effort for a reorganization.

The claim by the men for equal wages with the Winnipeg Hydro was finally modified by them for the present time, and in order to affect an amicable agreement a request was then made for a horizontal increase of five per cent over the present schedule. This claim was made on the basis of equalization with other employees of the companies who had received in holidays with pay within the past year concessions which amounted to about five per cent of their wage schedule. For the same reason as given above the companies claimed they could not grant this request.

In a further effort for an amicable settlement the men made a claim for an increase in wages for about twenty of their number, being maintenance men who they claimed had not received a \$5 per month increase which had been made to certain of their fellows.

However, the officials of the companies stated that to make this adjustment would prejudice the wage agreement with other men doing similar work in their employ in other departments of the utility, and consequently for this reason and on account of their general financial condition could not comply with the request.

Your Board has carefully gone into the statements and claims of both sides and has investigated their accuracy. The points in dispute have been carefully considered. The findings of your Board are as follows:—

1. That the schedule as to hours of labour and working conditions amicably agreed upon and which is hereto attached should be signed by both parties to be effective from October First, 1935, to April Thirtieth, 1936.

2. That the men are being paid at the present time reasonably good wages. For those of them that reside at the Hydro plants their living conditions are reasonably good. Their employment is continuous twelve months of the year and comparing their welfare with the general conditions that exist to-day, their lot is much better than many who receive much higher rate of wages but do not have steady employment.

3. The Board finds that the Companies have an accumulated deficit of a very large sum of money which is increasing steadily from time to time. That the companies have not paid any dividends on common or preferred stock for many years and that default has been made in payment of interest on their bonded indebtedness.

4. The Board finds that at this particular time when the companies are endeavouring to reorganize their whole financial structure for the purpose of avoiding bankruptcy it is as much in the interests of the men as the companies that nothing should be done to prejudice their efforts in that direction. The Board is of the opinion that to increase any portion of the controllable expenditure of the companies at this time would probably have that effect, and for that reason the Board feels that it cannot make any award for any increase in salaries as asked by the men.

Mr. R. B. Russell, one of the members of this Board, joins with the other two members in this Report with the exception only of the findings of the other two members on the question of wages and his minority report in this regard is attached hereto.

All of which is respectfully submitted.

(Sgd.) ROBERT JACOB,  
*Chairman.*

(Sgd.) C. A. CLENDENNING,  
*Member.*

(Sgd.) ROBERT B. RUSSELL,  
*Member.*

WINNIPEG, December 13, 1935.

This agreement made in duplicate this..... day of..... 1935, between: The Winnipeg Electric Company hereinafter called "The Company" of the first part; and The Sub Station and Hydro Plant Employees comprising groups at Great Falls, Pinawa, Seven Sisters, Lockport, Stony Mountain, Middlechurch, Greater Winnipeg, Patrol Men, hereinafter called "The Employees" of the second part

Witnesseth that the parties hereto agree as follows:—

This Agreement shall take effect and be binding upon the parties hereto from the first day of October, 1935, until the 30th day of April, 1936, and thereafter until terminated as hereinafter provided. If either party desires to terminate this Agreement on the 30th day of April, 1936, they will give the other party thirty (30) days' notice prior to that date. If such notice is not given this Agreement shall continue in force thereafter until terminated by a thirty (30) day notice by either party prior to the first day of May in any year.

#### GENERAL CLAUSES—CITY OPERATING STAFF

A. The Company will not discriminate against any employee for being a member of the Employees' organization, or who from time to time is chosen to represent his fellow employees as committee-men. Employees also agree that they will not discriminate against nor intimidate employees who are not members of the Association.

B. Except in the case of system emergency or temporary emergency conditions, no change in working conditions set forth in this agreement shall be made except after due notice has been given to the employees.

C. All employees shall receive their pay, semi-monthly and during the working hours on the specified day. Should the regular payday fall on a Saturday, Sunday or on a holiday, the preceding day shall then become payday.

D. After one year's continuous service each employee shall be entitled to two (2) weeks vacation with pay in each year. When possible holidays are to be taken between the 1st of May and the 1st of November, unless otherwise agreed to by the Superintendent of the Department and the person concerned. Choice of holidays shall be given employees according to seniority in the class or station in which they are employed providing it does not interfere with the efficiency of the department.

E. In general, all overtime is to be worked by the regular operator of the substation in which overtime is necessary.

F. An employee shall not be held liable for payment of damages to equipment until the matter shall have been fully investigated by a joint committee of the employees and the management.

G. Seniority with efficiency shall govern all promotions. A seniority list, agreed upon between the representative of the employees and the Management, shall be posted annually.

H. A Grievance Committee appointed by the employees shall have the right to discuss with the Superintendent any grievance, either of an individual or collective nature, which may arise. Should the decision of the Superintendent not be satisfactory to the Committee, they shall have the right of laying the grievance before the Manager, Electric Utility, and if necessary before the management of the Company to whom it shall be referred in successive steps.

#### ARTICLE No. 1

In the three-shift stations, eight consecutive hours during the twenty-four shall constitute a day's work; forty-eight (48) hours shall constitute a week's work.

In two-shift stations, nine and one-half (9½) hours shall constitute a day's work (5:30 K to 15:00 K and 15: K to 24:30 K). Five (5) days shall constitute a week's work.

In stations where operating conditions permit of a split shift such shifts shall not exceed a thirteen (13) hour-spread, and the Company will, to the best of its ability, endeavour to keep the spread down as low as possible. Spread Time is defined as the elapsed time from the commencement of the first period to the end of the last period worked in one day.

All time worked in excess of the hours stated above shall be paid for at the overtime rates set forth in Article 2.

#### ARTICLE No. 2

*Sec. A.*—All time worked over the regular hours of duty shall be paid for at the rate of time and one-half for the first four hours, and double time thereafter. Employees shall not be laid off to balance overtime worked.

*Sec. B.*—When men are assigned to work on their day off, they shall be paid time and a half.

*Sec. C.*—Any employee called out in case of emergency shall receive not less than four hours pay at the regular rate

*Sec. D.*—The overtime rate shall be figured by taking the monthly salary and dividing by two hundred and eight (208).

#### ARTICLE No. 3

If, for any reason, an employee of the Operating staff is assigned to a higher position he shall be paid the higher rate for any time worked over two consecutive shifts.

#### ARTICLE No. 4

*Sec. A.*—Apprentice floormen shall be considered temporary employees and on probation for the first six (6) months of service.

*Sec. B.*—After completion of six (6) months satisfactory service apprentice floormen shall become junior floormen, and after a further six (6) months' service shall be rated as senior floormen.

*Sec. C.*—Apprentice and junior floormen shall not operate equipment in any station unless under the supervision of the operator in charge except in cases of emergency, and then only if the employee is competent to take charge in which case he will be paid on the basis set forth in Article 3.

*Sec. D.*—A senior floorman, before taking over a higher position, shall, when necessary, be given the period of training set forth in Article 8, Section A.

#### ARTICLE No. 5

*Sec. A.*—Operators, assistant operators and floormen shall do no construction or repair work except in cases of emergency. All work shall be carried on in conformity with the Company's Safety Code.

#### ARTICLE No. 6

*Sec. A.*—Employees assigned to substations outside the Municipal limits of Winnipeg or St. Boniface shall be paid travelling time, but only from the city limits to and from the station to which they are assigned.

*Sec. B.*—Where a City Operator has to remain temporarily outside the City living expenses shall be paid.

#### ARTICLE No. 7

*Sec. A.*—An employee who has been promoted and is found unable to fill the duties of the higher position shall revert to his former position and shall take the seniority of the man who replaces him.

*Sec. B.*—An Employee who once refuses a promotion shall lose his right to further consideration for promotion except where the promotion would necessitate a change of residence.

#### ARTICLE No. 8

Should an employee be demoted he shall revert to the next junior position to the one previously held and take seniority below other employees in that classification.

#### ARTICLE No. 9

*Sec. A.* When operators are moved to stations they have not previously operated they shall, if necessary, be given the following period for training:—

- 4 weeks at Mill Street station
- 2 weeks at Transcona station
- 2 weeks at Fort Garry station
- 2 weeks at McPhillips station
- 2 weeks at St. James station
- 2 weeks at St. Boniface station
- 2 weeks at Sherbrooke station
- 1 week at all other stations.

*Sec. B.* The line of promotion shall be as follows:—

Apprentice floorman—1st 6 months preferably at Mill Street.

Junior floorman—2nd 6 months at Mill Street, McPhillips or Fort Garry.

Senior floorman—Mill Street, McPhillips or Fort Garry.

Regular operator—Logan substation.

Relief operator—Logan substation and North End substation or Logan substation and Fort Rouge substation.

Regular operator—North End or Fort Rouge substation.

Relief assistant operator—Mill Street.

Assistant operator—Mill Street.

Senior operators

Relief chief operators—Mill Street.

Chief operators—Mill Street.

#### ARTICLE No. 10

When new positions are created in the department, first consideration shall be given to men already in that department.

In the event of a man being transferred from another department to a position in the operating department governed by the existing schedule, he shall be classed as junior man according to the established seniority list.

#### ARTICLE No. 11

*Sec. A.* Any reduction of staff shall be in accordance with the established seniority list. In the event of a vacancy in the department seniority with efficiency shall govern re-employment at all times.

*Sec. B.* Junior and Senior floormen upon being re-employed after reduction in staff shall be paid at the rate of pay then paid to these classifications.

#### *Wages and Working Conditions Governing Employees at the Power Plants (General Clauses)*

*A.* The Company will not discriminate against any employee for being a member of the Employees' organization, or who from time to time is chosen to represent his fellow employees, as a committeeman.

Employees also agree that they will not discriminate nor intimidate employees who are not members of the Association.

*B.* Except in the case of system emergency or temporary emergency conditions, no change in working conditions set forth in this agreement shall be made except after due notice has been given to the employees.

*C.* Reasonable accommodation will be made by the Company to cash cheques.

*D.* After one year's continuous service monthly employees shall be entitled to two weeks holiday with pay each year.

Employees paid by the hour will be given vacations with pay on the same basis as an hourly rated employee of Winnipeg Electric Company.

When possible, holidays shall be taken between the 1st of May and the 1st of November, unless otherwise agreed to by the Superintendent and the person concerned.

Providing it does not interfere with the efficiency of the plant, choice of holidays shall be given employees by classification according to seniority.

*E.* Seniority with efficiency shall govern all promotions. A seniority list, agreed upon between the representative of the employees and the Management, shall be posted annually.

*F.* An employee shall not be held liable for payment of damages to equipment until the

matter shall have been fully investigated by a joint committee of the employees and the management.

*G.* A grievance Committee appointed by the employees shall have the right to discuss with the Superintendent any grievance which may arise either of an individual or collective nature.

Should a decision of the Superintendent not be satisfactory to the Committee, they shall have the right of laying their grievance before the Manager of the Electric Utility, and if necessary before the Management of the Company, to whom it shall be referred in successive steps.

*H.* An employee who has been promoted and is found unable to fill the duties of the higher position, shall revert to the next junior position which his former experience qualifies him to hold and shall take the seniority of the man who replaces him.

An employee who once refuses a promotion shall lose his right to further consideration for promotion except where the promotion would necessitate a change of residence.

*I.* Should an employee be demoted, he shall revert to the next junior position which his former experience qualifies him to hold and take seniority below other employees in that classification.

*J.* Any reduction in staff shall be in accordance with the established seniority list.

In the event of a vacancy in the plant, seniority with efficiency shall govern re-employment at all times.

*K.* Each employee of the operating staff shall be entitled to four days (of 24 hours) leave of absence in each twenty-eight days in lieu of Sundays. During the twenty-eight days in which the fourteen day holiday is taken, only two additional days in lieu of Sundays will be allowed.

*L.* If for any reason an employee of the operating staff is assigned to a higher position, he shall be paid the higher rate of pay for any time worked over two consecutive shifts.

#### *Working Conditions Governing Maintenance Men at the Power Plants*

(a) The following general clauses contained in the section entitled "Wages and Working Conditions Governing Employees at the Power Plants" shall apply to the Maintenance Staff:—

A, B, C, D, F, G, H.

(b) If for any reason an employee of the Maintenance Staff is assigned to a higher position, he shall be paid the higher rate of pay after having worked two consecutive days in that position.

#### *Hours of Labour:*

(a) Eight (8) hours shall constitute a day's work from 8:K. to 12:K. and from 13:K. to 17:K. (Monday to Saturday inclusive).

(b) Employees who are called upon to work in excess of the above hours shall be allowed equivalent time off in compensation for time so worked.

#### *Working Conditions Governing Patrolmen*

The following general clauses contained in the section entitled "Wages and Working Conditions Governing Employees at the Power Plants" shall apply to the Patrolmen:—

A, B, C, D, F: Also clauses G and H and section (a) of Article 11 of General Clauses relating to City Operating Staff, shall be applicable.

**City Patrolmen:**

(a) Eight (8) hours shall constitute a day's work. Monday to Friday inclusive and four (4) hours on Saturday, i.e. from 8:00. to 12:00. For all time worked in excess of these hours the men shall be allowed time off to compensate for time so worked.

(b) City Patrolmen assigned to work outside the limits of their regular patrol shall be paid living expenses and transportation.

(c) City Patrolmen shall be granted all public holidays. If due to emergency conditions Patrolmen are required to work on such holidays, they shall be allowed equivalent time off in compensation for same.

The following shall be defined as public holidays:—New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

**Country Patrolmen:**

(a) Forty-eight (48) hours shall constitute a week's work.

(b) Patrolmen shall be allowed the equivalent of one day off in seven, relief schedule to be arranged between employees and their Superintendent, so as to interfere as little as possible with the operation of the system.

**Working Conditions for Winnipeg Selkirk and Lake Winnipeg Railway Substation Operators**

A. The Company will not discriminate against any employee for being a member of the Employees' organization, or who from time to time is chosen to represent his fellow employees as a committeeman. Employees also agree that they will not discriminate against nor intimidate employees who are not members of the Association.

B. Except in the case of system emergency or temporary emergency conditions no change in working conditions set forth in this agreement shall be made except after due notice has been given to the employees.

C. All employees shall receive their pay semi-monthly and during the working hours on the specified day. Should the regular pay day fall on a Saturday, Sunday, or on a holiday, the preceding day shall then become pay day.

D. After one year's continuous service each employee shall be entitled to two weeks vacation with pay in each year. When possible holidays are to be taken between the 1st of May and the 1st of November, unless otherwise agreed to by the superintendent of the department and the persons concerned. Choice of holidays shall be given employees according to seniority in the class or station in which they are employed providing it does not interfere with the efficiency of the department.

E. In general, all overtime is to be worked by the regular operator of the substation, in which such overtime is necessary.

F. An employee shall not be held liable for payment of damages to equipment until the matter shall have been fully investigated by a joint committee of the employees and the Management.

G. Seniority with efficiency shall govern all promotions. A seniority list agreed upon between the representatives of the employees and the Management shall be posted annually.

H. A Grievance Committee appointed by the employees shall have the right to discuss with the superintendent any grievance, either of an individual or collective nature, which may arise. Should the decision of The Superintendent not be satisfactory to the Committee,

they shall have the right of laying the grievance before the manager, Electric Utility, and if necessary before the management of the Company, to whom it shall be referred in successive steps.

**ARTICLE No. 1**

Eight hours during the twenty-four shall constitute a day's work; forty-eight (48) hours shall constitute a week's work. In the stations where operating conditions permit of a split shift such shifts shall not exceed a thirteen (13) hour spread, and the Company will, to the best of its ability, endeavour to keep the spread down as low as possible. Spread time is defined as the elapsed time from the commencement of the first period to the end of the last period worked in one day.

All time worked in excess of hours stated above shall be paid for at the overtime rates set forth in Article 2.

**ARTICLE No. 2**

Sec. A. All time worked over the regular hours of duty shall be paid for at the rate of forty-five cents per hour (45c.). Employees shall not be laid off to balance overtime worked.

Sec. B. When men are assigned to work on their day off, they shall be paid time and a half.

Sec. C. Any employee called out in case of emergency shall not receive less than one hours pay at the regular rate.

**ARTICLE No. 3**

If for any reason, an employee of the operating staff is assigned to a higher position he shall be paid the higher rate for any time worked over two consecutive shifts.

**ARTICLE No. 4**

Operators shall do no construction or repair work, except in case of emergency. All work shall be carried on in conformity with the Company's "Safety Code."

**ARTICLE No. 5**

When new positions are created in the department, first consideration shall be given to men already in the department.

In the event of a man being transferred from another department to a position in the operating department governed by the existing schedule, he shall be classed as junior man according to the established seniority list.

**ARTICLE No. 6**

Any reduction of staff shall be in accordance with the established seniority list. In the event of a vacancy in the department seniority with efficiency shall govern re-employment at all times.

**Minority Report**

*In the matter of the Industrial Disputes Investigation Act and in the matter of the difference between the Winnipeg Electric Company, the Manitoba Power Company, the Northwestern Power Company and Winnipeg, Selkirk and Lake Winnipeg Railway Company and their Employees being Members of the Association of Substation and Hydro Plant Employees.*

To the Honourable Minister of Labour, Ottawa, Ontario.

SIR,—The undersigned has the honour to advise you that, for the reasons herein set out, he finds it necessary to dissent from the report of the other two members of the Board on the question of wages.

In the employees' original claim they sought to have their wages brought up to equal the wages paid by the City of Winnipeg Hydro.

In answer to this claim of the employees, the Company claim they are unable to pay as high wages as the Winnipeg Hydro:

1st: Because they have to pay higher interest rates on borrowed capital than the City Hydro.

2nd: The Companies claim that political influence has a great deal to do with the fixing of wages in the City Hydro.

3rd: The Companies claim that their financial position has grown steadily worse in the past five years.

In rebuttal to these claims the employees representatives contend:

1st: That the capitalization upon which the Companies charged fixed charges was all out of proportion to the physical values of the properties.

2nd: That the claim of the Companies that political influence had a great deal to do with the fixing of wages paid by the City Hydro was not according to the facts because the wages now being paid by the City Hydro were fixed by an unanimous report of a Board of Conciliation appointed by the Minister of Labour, the chairman of which was Mr. W. M. Neal, General Manager of Western Lines, Canadian Pacific Railway Company, Mr. Wm. G. Chace, representing the City, and Mr. Harry Stephenson representing the employees.

3rd: That the claim of the Companies that their financial position had grown steadily worse in the past five years is not borne out by the evidence submitted by the Companies' representatives.

In substantiation of this contention the employees point out that in the exhibit presented by the Companies on their financial position the following facts are disclosed:

<i>Gross Earnings</i>	
1929.. . . . .	\$2,856,001
1930.. . . . .	2,893,194
1931.. . . . .	2,926,812
1932.. . . . .	2,970,005
1933.. . . . .	2,770,830
1934.. . . . .	2,929,351

While during the same time operating expenses have been reduced over the same period as follows:—

<i>Operating Expenses</i>	
1929.. . . . .	\$650,280
1930.. . . . .	699,650
1931.. . . . .	610,842
1932.. . . . .	609,364
1933.. . . . .	562,868
1934.. . . . .	596,718

Leaving the net earnings from operations increased instead of decreased, as claimed by the company, which will be seen from the following figures:—

<i>Net Earnings From Operations</i>	
1929.. . . . .	\$2,205,721
1930.. . . . .	2,193,544
1931.. . . . .	2,315,970
1932.. . . . .	2,360,641
1933.. . . . .	2,207,962
1934.. . . . .	2,332,633

On top of this the Company representatives failed to present any figures of their earnings for 1935, whereas the employees' representatives presented evidence which was admitted by their employers that during 1935 there was a tremendous increase in electrical energy produced over the previous year as the following figures will show:—

August, 1935, increased over August, 1934, 14,285,800 Kilowatt hours.

September, 1935, increased over September, 1934, 14,098,600 Kilowatt hours.

Or a total increase over the previous year for two months mentioned of 28,384,400 Kilowatt hours.

I regret that my colleagues could not see their way clear to join with me in recommending an increase in the wage scales of the men involved to bring them in line with the scales prevailing in the City of Winnipeg Hydro, especially in view of the fact that the employees contended, and their employers admitted, that these men are called upon to operate a more complicated system than the City Hydro System.

The evidence presented to the Board by the employees of higher wage scales being paid in almost every Hydro system throughout the country alone, in my opinion, outside of the other reasons outlined in the foregoing, compels me to recommend that the increases sought by the employees involved should be granted.

(Sgd.) R. B. RUSSELL.

Dated this 14th day of December, 1935, at Winnipeg, Manitoba.

## **Report of Board in Dispute Between the Canadian Collieries (Dunsmuir), Ltd., and Certain of Its Employees**

The findings of the Board of Conciliation and Investigation in the matter of a dispute between the Canadian Collieries (Dunsmuir), Ltd., and certain of its employees at Cumberland, B.C., were received in the Department of Labour on December 28. The dispute related to the employees' request for the adoption of a rotation system of employment, and their contention that the company had violated

the existing agreement by introducing a new contract system for cutting and loading coal.

Following is the text of the various reports received in this matter. The majority findings, it will be noted, are signed by Mr. J. A. Russell, chairman, and Mr. George Kidd, the Board member nominated by the company. The men's nominee on the Board, Mr. Charles McGregor Stewart, signed a minority report.

### Report of Board

*In the Matter of the Industrial Disputes Investigation Act and of a Dispute between The Canadian Collieries (Dunsmuir) Limited (employer) and certain of its employees at Cumberland, B.C., (employees). Report of your Board of Conciliation and Investigation established under the provisions of the Industrial Disputes Investigation Act in respect of this dispute.*

To the Hon. Norman McL. Rogers, M.P.,  
Minister of Labour,  
Ottawa, Canada.

HONOURED SIR,—On November 12, 1935, the Chairman of this Board received his formal appointment with accompanying documents, instructions, forms, etc., and immediately sent out notices to Messrs. Stewart and Kidd, fellow appointees of the Board, calling for a meeting of the full Board for organization and general purposes on November 13, at 11.30 a.m.

On November 13 the Board met in the office of the Chairman, and all three members made Oath in forms supplied by your Registrar (hereto attached), that they would faithfully and impartially perform the duties of their office. From a careful consideration of the Statutory Declaration accompanying the application for the establishment of this Board by the employees and the statement in reply by the employer of the nature and possible occasion for any dispute therein, and from a common knowledge (since confirmed) of the many million dollars involved in the capital structure and debenture debts of the employer, and of the great number of employees involved working for the company, and of the great importance of the coal mining industry to British Columbia and Canada, and what a "Strike" or a "Shut Out" would mean to the Governments of the Province and Dominion in the matter of unemployment and relief to some 1,700 employees and their families (and this apart from any question of the possible bankruptcy of the employer), the Board realized its great responsibilities and entered upon its duties with an earnest desire and intention to aid in every way possible the prevention and settlement of any strike or lockout arising in or out of this dispute.

Note was made that the utmost economy consistent with the due carrying out of the Board's responsibilities should be practised and only necessary expenditures incurred.

In view, however, of the improbability of being able to obtain clerical assistance in Cumberland and that such assistance would be necessary for the sending of notices, type-

writing notes of evidence, happenings at sittings and reports, copying of exhibits, agreements, schedules and other necessary memoranda for individual members of the Board, it was decided that the Chairman be authorized to arrange for a Secretary to accompany the Board to Cumberland on terms to be recommended by him to the Minister. Pursuant to this understanding, Vera Mayall was later engaged as such secretary and has continued to act until the completion of this report. A study of the Industrial Disputes Investigation Act itself was recommended to all members of the Board as well as the material and instructions received from your Registrar.

The sittings adjourned on the Board deciding to reconvene at Cumberland on Vancouver Island, the locality of the dispute, on the 19th day of November at 10.30 a.m., notice to be sent to the respective parties to the dispute accordingly. Such notice was duly sent forward by the secretary, and on Monday, the 18th day of November the Board with its Secretary proceeded to Cumberland, arriving there on the evening of November 18, 1935.

On the 19th at 10.30 a.m., a public sitting of the Board was formally opened at the (Small) Court Room, Cumberland, and the commission of October 12, 1935, of the former Minister of Labour establishing this Board of Conciliation and Investigation and its confirmation by the Honourable the present Minister was duly read and the Board declared its first sittings opened.

Messrs. Sam English, James Robertson and John Stockand, employees of the employer up to August 5, 1935, offered themselves as persons designated and were accepted as representing the employees before the Board. Colonel Villiers, General Manager, Robert Laird, Superintendent of Mines, and Mr. J. Dick, Accountant of the employer company, were accepted as persons designated to represent the employer. No counsel or solicitor appeared for either party.

The forenoon session of the sittings was devoted to enquiring from the representatives of the parties, the nature and cause of the dispute, including any claims or demands made by either party upon the other to which exception is taken, an estimate of the number of persons affected or likely to be affected and the interests likely to be affected by the dispute, and the efforts made by the parties themselves to adjust the dispute.

At this point the Chairman directed attention to the requirements of Section 24 of the Act, that the Board shall in such manner as it thinks fit, expeditiously, and carefully enquire into the dispute and all matters affect-

ing the merits and right settlement thereof, and suggested an adjournment to allow the parties to consider and agree upon possible terms of settlement.

It was finally decided with the full consent and approval of all representatives of both parties to the dispute that the Board hold an informal meeting to be attended by the full Board and all the six representatives of the parties to the dispute. The idea being that at such informal sittings the respective parties might make proposals and counter proposals for a settlement with the right to the Board to make all suggestions and do all such things as it might deem right and proper for inducing the Parties to come to a fair and amicable settlement of the dispute, a memorandum of which could be drawn up by the Board and signed by the parties.

At this sitting convened for the afternoon of November 19, some three hours were devoted to the Board's efforts to bring about a settlement of the dispute.

The Employees through their representatives promptly came forward with the following proposal, viz.:—

"Mr. Chairman and Gentlemen of the Board and of the Company. We propose for the basis of a settlement, the reinstatement of the men who were employed by the Company prior to August 5. Our first proposal is the reinstatement of the 25 or 26 men who are not back to work.

Second that we will not bind the Company to having every employee on the rotary system. We realize the impossibility of all employees going on the rotation system. These 25 men are very efficient workers and they can do practically any job in the mine, with the exception of probably the mechanics and other work of that kind."

This proposal analyzed and discussed from every conceivable standpoint resulted in its becoming a firm offer from the Employees to settle all matters in dispute on terms requiring only the reinstatement on a rotation or rotary plan of the 25 or 26 men who were among the forty men employed in No. 5 mine prior to August 5, 1935, and who had not been put back to work.

This offer advanced matters considerably in that it indicated that getting these 25 or 26 men back on the pay list was the main objective of the application for the establishment of this Board and its acceptance would mean a settlement of all matters in dispute.

The answer of the Employer was that all the 25 or 26 men "would be taken back as jobs came up within the next six months" with the exception of one man Robertson,

but not on any rotary or rotation system. (As a matter of conciliation the discrimination against Robertson was later on withdrawn.)

The Employer expressed willingness to take back a sufficient number of men to run the mine, and later stated it was trying to increase the production of the mine so that all the 26 men could be put back to work without discrimination but *not on any rotation system*.

This system the Employer termed an impracticable system, that it would be detrimental to the safety of all those employed in the mine, that it had been tried before and was not workable, and that if adopted in this particular case the system would have to be adopted generally, and this would mean the Employer would have to take on some five hundred men, former employees out of employment because the Company could not provide work for them.

When asked if the Employer had any other plan in mind under which these men could be taken back the answer was: "When we have room for them we will take them all back, we have taken some of them back as it became necessary for the proper economic safe working of the mine. We have more men than we need just now," adding that "the system would be unfair to other Employees. As a rule we only work 220 days a year." The Employees pressing for the acceptance of their offer and the adoption of the rotation system which they warmly advocated and supported, the Employer refusing any other reply than as above and no further or other offers, counter offers or suggestions being forthcoming, it looked like an impasse.

The Chairman remarked the Board has not created this awkward situation. "Parliament passed this Act making it so that our first duty is to try and bring about a settlement between parties. If you cannot settle along the lines discussed to-day and you cannot give us any other suggestion on which to act, it means that we will have to continue our enquiry and our efforts at conciliation under the Act. Before we adjourn I again ask if there is not some way in which a settlement can be brought about between the parties. We seem to have gone as far as we can as far as the Employees are concerned, and we think the Employer will have to say the same. Is there in the minds of any one of you some other way? Has the Board done what it can to bring about a settlement?" Mr. Robertson for the Employees said: "I believe that we can go back to the men and tell them that the Board has tried everything in its power to bring about a settlement." The Employer, through Colonel Villiers, expressed a like view.

The sittings adjourned to meet on the morrow at the Athletic Hall, Cumberland, B.C., at 11.00 o'clock in the forenoon.

November 20 and 21, 1935.

Sittings resumed at Athletic Hall, Cumberland, B.C., at 11.00 a.m. with full Board, three representatives of Employees, three representatives of the Employer and a large audience, presumably miners or citizens of Cumberland present.

The Chairman for the Board intimated that for the present it would seem that all efforts looking to a settlement made through the customary authorities, the Mining and Labour Department of the Provincial Government, the Department of Labour of the Dominion, and so far, of this Board, had proved unavailing and it was now open for the Board to proceed with the investigation as provided in the Industrial Disputes Investigation Act and the rules established for the guidance of the Board. He pointed out that the dispute in question is first raised by certain of the Employees of the Canadian Collieries (Dunsmuir) Limited, and they asked for the establishment of this Board and this investigation. It therefore becomes the part of the Employees that they shall lead either with a statement of their grievances or with evidence in support of the matter set out in their application for the appointment of this Board, adding that the Board is now constituted to hear evidence, argument, respective views of parties of the matter in dispute, particularly in the direction of conciliation and in the interests of the best possible settlement that can be made in respect of this dispute.

He defined "Dispute" in the words of Section 2, subsection "D" of the Act, and intimated that unless the Board can be convinced to the contrary it was confined to the causes of dispute set out in the Employees' application when they asked for this investigation, and the answer of the Employer, and expressed the wish that parties confine themselves to this material, adding that it might seem technical that the Board can only deal with what it was asked to enquire into, and he asked the representatives of the Employees to let the Board know what they had to say on this subject or on the subject matter of the Dispute either in the way of evidence or argument.

Mr. English, one of the spokesmen for the Employees, addressed the Board as follows:—

"Mr. Chairman and Gentlemen of the Board. We are before you to present the Employees' side of the dispute. First, by proving to you that we did not break the agreement on August 5. Second, by bringing

to your attention what steps have been taken by us to settle this dispute. But we ask that, before going into this matter, those men who are now not working be put back to work as it states in Chapter 112, Clause 58, Subclause 2 of the Industrial Disputes Investigation Act, that everything should be the same as it was before August 6."

It should be explained here that written Articles of Agreement were made and entered into the 21st day of November, A.D. 1934, by and between the Canadian Collieries (Dunsmuir) Limited and the Employees of the Canadian Collieries (Dunsmuir) Limited in and around the Comox Mines.

These Articles of Agreement were put in evidence and the provisions of the Agreement were frequently referred to during the sittings of the Board as being the governing agreement between the parties to this dispute as from November 1, 1934, to October 31, 1936. This is the agreement referred to by Mr. English which he asserts the Employees "didn't break on August 5."

Two days, November 20 and 21, were devoted by the Board to taking evidence, noting arguments, pro and con, and to efforts of the Board to conciliate and bring about a settlement of the many points of difference arising, some of which perhaps were not altogether within the ambit of the Board's commission, but the settlement of which or their removal from the dispute might well have tended to a better understanding and therefore to a better feeling conducive to a settlement between parties.

The points taken by the Employees in the order in which they presented them at this and other sittings to date, may well be outlined as follows:—

1. That practically as a condition precedent to the continuance of this investigation that some 26 men who had been employed in No. 5 Mine on August 5 but who were not now working be put back to work in order that everything should be the same as it was before August 5, citing and relying on Section 58 of the Industrial Disputes Investigation Act.

2. That the Company, contrary to the Agreement on November 21, 1934 (mentioned above), introduced on August 2, 1935, a New Contract System.

3. That this New Contract System was brought about by approaching the Employees through individual miners rather than through the Grievance Committee in accordance with above mentioned existing agreement.

4. That the Employer did not notify the Grievance Committee of the change in work

brought about by this New System from day work to piece work.

5. That certain employees who were not included among those entering into this piece work contract were discriminated against.

6. That the New Contract so brought into effect was dangerous from gas.

7. That the attitude of the Employer's Superintendent towards the Grievance Committee was dictatorial when he told them that this New Contract was none of their business.

8. That the Employees did not go on "Strike" on August 5 or 6, 1935, but that on the contrary what happened was a "Lockout" by the Employer within the meaning of the existing agreement between parties and the Industrial Disputes Investigation Act.

9. That this "Lockout" was for the purpose of forcing the Employees to accept the New Contract System.

10. That the Rotary System or Rotation System has been and can be successfully continued and adopted in the like interests of Employees and Employer.

11. That the Employer is consistently hostile to "Collective bargaining."

12. That the Employer has not lived up to its existing agreement with its Employees.

13. That if the Board's findings are made without the reinstatement of the 26 discriminated men then the Board has not ended the dispute, but leaves the Employees with no other alternative than to resort to strike action in order to get justice.

In respect of these thirteen major and minor points of issue, nine witnesses, including Mr. English, spokesman for the Employees, were duly sworn and gave evidence. This evidence, discussion and argument occupied the Board until 7:30 p.m. of the 21st of November. Notes of evidence, argument and efforts of conciliation and settlement occupies 129 typewritten pages. Twelve different exhibits were put in some of them requiring study and analysis. Copies were made for the individual members of the Board for their perusal in connection with notes of evidence and argument.

The Employees intimated a desire to call innumerable witnesses, but as the evidence to be tendered would be a matter of opinion and have no direct bearing on the above issues and would otherwise be of no assistance, the Board decided against the futility and expense of calling such further witnesses.

The Employees asked that the Board visit and inspect No. 5 Mine in question. The Chairman and Mr. Kidd could see no point or advantage to either party in taking a day for such a visit and examination. Mr.

Stewart, the third member of the Board thinking otherwise, the Board delegated to him the right to comply with the Employees' wishes to visit the mine and hand in a report of the result of his examination and enquiry to the Board. This Mr. Stewart attended to on the 22nd and his report has been considered at subsequent meetings of the Board.

At this stage in the proceedings the Employees asked the Employer for a meeting of a committee from the Employees to meet Colonel Villiers in an endeavour to bring about a settlement. It was finally arranged, with the assistance of the Board, that a new Employees' Committee be elected by secret ballot, and Colonel Villiers, for the Employer, agreed to meet this Committee at any time to discuss a settlement—a new agreement between Employees and Employer or a continuance of the original Agreement until October 31, 1936. This Committee to function as soon as possible, the result to be reported to the Board at a sitting to be called in Vancouver.

Before adjourning the sittings, the Chairman impressed on the representatives of both parties to the dispute that the Board would continue its efforts at conciliation and settlement, and asked if either party had any further material they thought would be of any interest or could or would influence the Board in any way they should send it to the Board at Vancouver to be considered with the material now before the Board.

He added that if there was something before the Board or which might be brought before the Board about which the Board wanted to hear something more, in fairness to the Employees or to the Employer, further sittings would be arranged, but that in the meantime if either party had anything more to say the Board thought it could be much better considered if put in writing and sent forward as suggested.

The Employer did not call any sworn evidence, relying on their claim that as a result of the failure of the Conciliation Board to settle the dispute between the Company and its Employees owing to the refusal of the Company to reinstate the 26 men who were employed at the time of the walk out, the enquiry is now confined to the statement made by the Employees in their application for a Board of enquiry. The following signed statement was handed to the Board:

"The Company does not propose to call any witnesses or submit any further evidence as it is satisfied that the evidence submitted by Messrs. Bobby Brown, Victor Frelone, Peter Wilkinson and John Murdock, who were called by its Employees, amply confirms their

contention that the contract entered into with Bobby Brown and his associates is a contract similar to such as have been entered into from time to time with many of the Company's Employees since 1928. The Company contends that the contract entered into with Mr. Brown and his associates can, in no sense, be described as a 'new contract system' as it is, as stated before, similar to many other contracts entered into with various of the Company's Employees. The rate of pay agreed to be given to Mr. Brown and his associates is in accordance with the Company's agreement which provides on page 13 for 'a basic rate' which rate is the minimum, leaving the Company the option of increasing but not reducing such rate. The contention by the Employees of the Company that this so-called 'new contract system' should have been submitted to the Employees Grievance Committee is refuted by the evidence already referred to by Messrs. Bobby Brown, Victor Frelone, Peter Wilkinson, and John Murdock, all of whom with the possible exception of one, were of the opinion that the contract between the Company and Mr. Brown and his associates did not call for a submission to any Grievance Committee as it was similar to previous contracts, none of which have been submitted to any such Committee.

"The Company contends that the merits or demerits of the contract system is not the matter which is before the Conciliation Board. The Company further contends that the contract system is universal throughout the coal industry in all parts of the world. The Company still further contends that the evidence submitted by spokesmen purporting to represent all the Company's Employees amply proves the contention contained in the last paragraph in the Company's reply to the application to the effect that these spokesmen, two of whom are not employed by the Company, are influenced by their anxiety for re-employment and have thus been influenced by outside agitators who have visited Cumberland for the purpose of creating disturbances where harmony has existed between the Company and, at any rate, the majority of its employees.

Charles W. Villiers,  
General Manager,  
*Canadian Collieries (Dunsmuir), Limited.*"

The further sittings of the Board was thereupon adjourned to meet in Vancouver at the call of the Chairman, Mr. Stewart remaining in Cumberland to inspect the mine on November 22, and the Chairman proceeding to Vancouver by way of Victoria, stopping

off at Victoria on the 22nd and 23rd for the purpose of obtaining confirmation of the fact that everything possible had been done by the Provincial Department of Labour and Mines to avoid a strike or shut out in this trouble.

Unfortunately the Honourable the Minister of Mines and Labour was absent from Victoria and was therefore not interviewed, but from evidence given and a perusal of exhibits and other material, the Chairman was satisfied to report to the Board that the efforts of the Provincial Authorities practically resulted in a suggestion for the application for this Board and was unable to make any further headway towards a settlement than as above reported by this Board.

On November 27 the Employees sent forward a further statement of claim emphasizing some of the points already made, but largely argumentative. It was also mentioned that at a mass meeting held on November 24 it was decided to nominate a Committee for the purpose of negotiating with the Company as arranged at the last sitting of the Board. A sitting of the Board was summoned and held on the 29th for the purpose of considering this material and for a discussion of what further methods might be made in the direction of conciliation or of making our report.

At this sitting it was decided to encourage and wait results from the meeting between the new Committee and Colonel Villiers. It was further decided that the Chairman be asked to interview Colonel Villiers with a view to ascertaining if there was not some possible opening or if he could not make some suggestion that the Board could act upon with a view to aiding the Board's efforts at conciliation and settlement, using all the Board's influence to conciliation and a settlement in the best interests of all concerned.

On December 3, Colonel Villiers attended the Chairman at his office in Vancouver and an extended interview was held, only to find that the Colonel, as General Manager of the Employer, reiterated the position taken by the Employer during the sittings in Cumberland. He pointed out the position of the Company from the standpoint of its financial structure, its business position and the present condition of the coal mining industry in British Columbia.

His Company is incorporated under a Dominion Act with a capital of ten million common stock, five million preferred stock, and ten million debentures. No dividends have been paid for the past twenty years, and interest only at two per cent has been paid on half the debenture issue.

The Company is also a majority holder of the stock of the Western Fuel Company, with a capital of three million, and with a debenture debt of one million eight hundred thousand. The affairs of this Company are administered and controlled by the present Employer Company.

The number of mines in active production are:—

1. The Canadian Collieries, and
2. The Western Fuel Company. The men employed number 1,700, with an average wage of each employee for a short year of 220 days of some \$1,200 a year. The Company pays out some \$2,000,000 yearly in wages, this not including overhead.

He emphasized the fact that more men were employed just now than the position of the Company justified; that in order to help out the unemployment situation he had gone beyond the limits of prudent operations; that to take on any more men than the Company can usefully employ would not only mean dissatisfaction and in many cases want for those employed, but might well spell actual bankruptcy for the Company and the closing down of all its operations, and that the debenture holders were only keeping the Company going in the hope of better conditions generally and in the coal mining industry in particular.

He was striving now for better markets and consequent increased production, and this meant taking on of many more men and that the 26 employees in question would receive first call to work without any discrimination. The Company however has to conduct its business on its own strict economic business lines without dictation or uncalled for or unnecessary interference.

The Chairman reported the result of this interview at a subsequent meeting of the Board, to be considered with other material before the Board. At this subsequent meeting on December 10 the report was received from Cumberland that at a mass meeting of the Employees held on Sunday, December 8, it was decided to get in touch with the Board and inform the Board of what had taken place in Cumberland.

They reported that the Committee elected to negotiate a settlement had met with the Company officials, but no settlement was brought about, the Company only reiterating that they would take the men back as they needed them. They further reported that it was a known fact that the Company was still working short handed and that they could if they wanted put these twenty-six men on again without any trouble, that they had

started one man to work who was not among the twenty-six, when it was understood that no man be taken on until these men were all back to work.

It appearing to the Board that although we should continue our efforts at conciliation there was little prospect of success, and that the Honourable the Minister was entitled to our report from the material before us as above, it was therefore decided that Messrs. Stewart and Kidd prepare individual reports and findings, handing same to the Chairman with the hope and intention that from these reports he could prepare a final report in which all members of the Board would join, but even if divergent, in any case would appear in the report sent forward to the Minister, the idea being that what is reported above should have the assent and confirmation of all Members of the Board, that the individual findings and recommendations if any, of Members of the Board should appear in detail with the final summing up by the Chairman, who would ask the other members to sign same, and thus have a full report to put before the Minister in the one document.

Messrs. Stewart and Kidd having filed their individual reports with the Chairman, and having been found to be divergent, all Members of the Board join in signing this report as above on the understanding that the individual reports, including the Chairman's findings and recommendations will follow.

Signed at Vancouver, B.C., this 23rd day of December, A.D. 1935..

J. A. RUSSELL,  
Chairman.  
C. M. STEWART,  
GEORGE KIDD,  
Members of Board.

The Report of Mr. Stewart follows:—

*In the matter of The Industrial Disputes Investigation Act, Chapter 112 of the Revised Statutes of Canada 1927, and in the matter of a dispute between the Canadian Collieries Dunsmuir Ltd., and certain of their employees at Cumberland, British Columbia.*

#### INTRODUCTION

Application having been made pursuant to the provisions of the Act by the employees of the C.C. (D) Ltd. on the tenth (10th) day of September, 1935, for the establishment of a Board of Conciliation and Investigation, and a statement in reply having been transmitted by the C.C. (D) Ltd. to the Registrar on October 4, 1935, a Board was duly established consisting of the following:—

Mr. J. A. Russell, Chairman, appointed by the Honourable Minister of Labour; Mr.

George Kidd, recommended by the C.C. (D) Ltd.; Mr. Charles M. Stewart, recommended by the Employees.

The Board held public hearings at Cumberland on November 19, 20, and 21.

At the first sitting of the Board on November 19 the Chairman explained to the disputants the meaning of the Act, and notified them that the first duty of the Board was to endeavour to assist both sides to reach an amicable settlement. The hearing was then adjourned until 2:30 p.m. Both parties were asked to come to the next meeting with concrete proposals that could be used as the basis of a settlement.

The afternoon session took place at the Riverside Hotel, Courtenay, and was a private meeting between Employers and Employees, the Board sitting in their capacity of Conciliators.

The Employers did not avail themselves of the Board's recommendations and had no suggestions to offer for a settlement.

The Employees presented what they believed to be fair terms for settlement: "That the Company reinstate the men who had been denied employment for their union activity."

The Company refused to accept the men's proposal, although it met with favour from all members of the Board.

The argument of the Company against employing more men at the moment was that to do so the mine would have to work on a rotation system, and from past experience such a system had proven to be unsatisfactory.

This was denied by the men who claimed that periodically for many years the mines had worked "on rotation" successfully and that right up to the lockout on August 6, the rotation system had been in effect.

The Board was unanimous in asking the Company to consider this very reasonable request of the men, but without success.

The Board then resumed its sittings at Cumberland on November 20. Evidence was taken on the employees submission to Ottawa which charged that the Company, contrary to the agreement, introduced the New Contract System by approaching an individual instead of the Grievance Committee, in accordance with Agreement. When the Committee interviewed the Management in regard to the matter they were told that it was none of their business. The Committee had no other option than to lay this matter before the men at a pit head meeting. At this meeting it was decided that a Union meeting should be called the following day to discuss the matter more thoroughly, owing to the fact

that two-thirds of the men were unable to attend, owing to the mine working three shifts. At a well represented meeting held the next day it was decided by the men to inform the Company that they wished to abide by the agreement. The Committee informed the Management and were told that notices would be put out to the effect that No. 5 Mine would be closed indefinitely. Later in the afternoon the Company put out notices to this effect, also stating that men would have to take their tools out of the mine.

The men were locked out on August 6. On August 12 the mine was reopened, the men signaling their willingness to return to work on the understanding that a Conciliation Board would be granted, and that there would be no discrimination (the understanding that there would be no discrimination was arrived at from a study of the Industrial Disputes Investigation Act). This has not been the case. When the mine was reopened, 45 active Union men were debarred from employment owing to the fact that the Company refused to put into effect the former rotation system of work. Since that time some of these men have been taken back but there are still some 26 men locked out. This situation necessarily brings before the Board the rotation of work as it is linked up directly with the lock out on August 6.

After returning to Vancouver the Board still tried to bring the parties together, but the Company remained adamant.

The Board has been unsuccessful in reaching a unanimous decision and the following is the report of the Employees' Representative:—

From the evidence submitted to the Board I find that the Company put into effect on August 2 a New Contract System contrary to the terms and spirit of the Agreement entered into with the men on November 21, 1934. I find it was a new Contract System owing to the fact that all classes of work in the mine were covered in the contract. In previous contracts this was not done. I also find that the terms of the Contract were known in full, only to the two men that negotiated the contract with the Management. Neither did the Management notify the Grievance Committee of the change from Day Work to Piece Work.

I also find that a hardship was imposed on the men that were transferred from one working place to another, through the introduction of the Contract (less wages) and on the men who were discriminated against and have since been compelled to subsist on relief rations.

I further find that the Contract was instituted for the purpose of speeding up the work in this particular section, the logical outcome being an intensified speed-up in the rest of the mine.

A charge was made by the men that the section where the Contract System was put into effect was dangerous for gas and that men working on Contract would not be so careful as when working on day work; this was not refuted by the Company.

The Company was also at fault in the dictatorial attitude they adopted when approached by the Grievance Committee, seeking information on the Contract work. On this occasion they were told by Mr. Laird (Superintendent) that it was none of their business. In my opinion, if harmony between employees and employers is desirable such an attitude to the elected representatives of the workers is indeed poor tact.

Taking into consideration all these facts I can only come to the conclusion that the Company, and not the men, are responsible for the mine being closed on August 6. No other course was left open to the men than to hold a special meeting to discuss the unwarranted change in working conditions. The mine was working three shifts and this was the only method in which the men could meet collectively.

The Company contends that the meeting on August 6 constituted a strike, and was in violation of the agreement. This can not be substantiated. In the first place no coercion was used to keep men from going to work. Second, some men did go to work on that date. Third, the meeting was not called for the purpose of compelling the employer to accept terms of the employees, but only to discuss a condition of work that had been imposed upon the employees by the employers. Authority for such a meeting is covered in Article 12 of the Wage Agreement, which states in part—That they will not individually abandon or give up work except for good and valid reasons solely pertaining to such individual and not in any way or manner inconsistent with, or contrary to, the true intent and meaning of these present.

I further find that on August 6 the men were locked out by the Company for the purpose of forcing them to accept the new contract system, and to get rid of the Grievance Committee who faithfully carried out the instructions of the men and conscientiously worked in the interests of the Cumberland miners.

The men have proven before the Board that ever since the dispute originated they have worked consistently for an amicable

settlement. This has been checkmated at every turn by the obstinacy of the Company.

In my opinion, after the Company accepted the Board of Conciliation they should be made to live up to the meaning of the I.D.A. which states in Clause 58, Subsection 2, that former conditions shall not be altered pending the award of the Board. The Company has failed to live up to the Act, first by continuing with the contract work; second, by refusing to take back all the men who were locked out on August 6. Under these circumstances I must recommend to the Minister that the full penalty for violation of the above clause be imposed upon the C.C. (D) Ltd.

If I were to put any other interpretation on this clause, I would have to admit that the Act was drawn purposely to assist the employers to the detriment of the employees.

Previous to August 6, No. 5 Mine worked on a rotation system. The Company has brought no evidence before the Board to uphold their contention that the rotation of work is detrimental to the successful operation of the mine. Colonel Villiers (General Manager) claimed that the majority of the men do not want rotation, but the men themselves have voted unanimously in favour of it. Mr. Laird, when questioned on November 20, practically admitted that coal could be produced under the rotation system at no greater expense to the Company. Also from the evidence of experienced miners who have spent the greater part of their life digging coal, and from my own observations when visiting and examining the various working places in No. 5 Mine, I am convinced that the rotation system can be worked successfully.

Evidence brought before the Board by the men has not been disproved by the Company, that the mine at present is understaffed owing to the fact that the men are working 7 days per week. (Contrary to the 48 hour week law.)

The Board was told that on previous occasions the Company has foisted the rotation system on the men without even consulting them. After hearing all the evidence I was extremely hopeful that a unanimous finding on this point would be brought down. Surely the men who dig the coal and take all the risk should have some say in how they are to work.

The history of the Canadian Collieries (Dunsmuir) Ltd. shows a continuous hostility on the part of this Company towards organized labour. This is one angle which I have deeply considered when summing up, for the policy of past years is apparent to-day. All

those workers who were refused reinstatement are Union men, and included amongst them we find the whole Grievance Committee. No attempt was made by the Company to substantiate the charge made by Colonel Villiers that the trouble in Cumberland was caused by outside agitators and local Communists, but from my summing up of the evidence I find that the trouble is directly traceable to the Company's hostility to organized labour.

I also find from the evidence presented that the C.C. (D) Ltd. receives a subsidy from the Government for the purpose of keeping the mines working. The 26 men under dispute by being denied the right to work in the Cumberland Mines are forced on relief, and are now a burden on the community. I earnestly bring this matter before the Minister and ask him to use his powers to withdraw the subsidy until such time as these men are reinstated.

I also recommend that the present agreement on wages and working conditions be continued and lived up to by the Company until its expiration in November, 1936.

I must further add that if the Company persists to ignore the expressed wishes of the employees for a rotation of work and the reinstatement of the discriminated men, and through such obstinacy further trouble develops, the onus must be placed where it belongs—on the Canadian Collieries (Dunsmuir) Ltd.

(Sgd.) CHARLES M. STEWART,  
*Employees Representative.*  
 Dec. 19, 1935."

The report of Mr. George Kidd follows:—

*"Industrial Disputes Act Canadian Collieries (Dunsmuir), Limited and Its Employees at Cumberland, B.C."*

Report of Mr. George Kidd, a member of the Board of Conciliation and Investigation, appointed by the Minister of Labour on October 21, 1935, to investigate the dispute between the above.

The members of the Board visited Cumberland on November 16 and held three public hearings on the three following days.

#### *Board's Efforts Towards Conciliation:*

When the formalities attending the opening of the enquiry were completed, the Chairman suggested that an entirely informal meeting should be held at his hotel in the afternoon, for the purpose of ascertaining the real cause of the dispute, with the object, if possible, of arriving at some basis of settlement. At this meeting it transpired that some 40 employees who were on the payroll on the 6th August when the men

ceased to work, were not reinstated when it reopened on August 12. Between August 12 and this enquiry, approximately 14 of these 40 employees were reinstated, and the Company announced its intention of reinstating the remaining 26 as they are required, which they had reason to hope would be within the next 6 months. The reasons for the Company's action in this matter will be referred to later, but at this informal meeting it was found impossible to arrive at any compromise or concession from either side. The men on the one hand repeatedly and insistently demanding the immediate re-employment of these 26 men and the Company on the other hand refusing to depart from its policy, announced when the mine was reopened on the 12th August, of employing these men as and when conditions of work in the mines warrant their names again appearing on the payroll.

This matter is still in dispute, and there are no indications of any settlement being arrived at as both sides definitely and emphatically refuse any form of concession or to recede in any way from their original positions.

#### *The Employees' Grievance:*

All efforts towards conciliation having failed, the formal hearings of the Board were resumed on the 20th November at Cumberland.

The following is the sole grievance of the employees, as given in their report to the Minister of Labour:—

"The Company contrary to the agreement introduced the 'New Contract System' by approaching an individual instead of Grievance Committee in accordance with agreement. When committee interviewed management regards this matter they were told that it was none of their business. The committee had no other option than to lay this matter before the men at a Pit Head Meeting. At this meeting it was decided that a Union Meeting should be called the following day to discuss the matter more thoroughly. Owing to the fact that only one-third of men were able to attend because of men working three shifts. At a well represented meeting held next day it was decided by the men to inform the company that they wished to abide by the agreement. The committee informed the management and were told that notices would be put out to the effect that No. 5 Mine would be closed indefinitely. Later on in the afternoon the company put out notices to this effect also stating that men would have to take their tools out of the mine."

Articles of Agreement have existed between the Company and its employees for many years. These agreements cover working conditions and rates of pay. The agreement in force when the men ceased to work on August 6 is dated November 21, 1934, and clause 11 states that should any grievance

arise it must be submitted to the members of the Agreement Committee whose duty it is to bring such grievance before the Company. The employees did not follow this procedure in connection with the foregoing grievance before ceasing to work on August 6. The Company's statement set out in their reply to the statement made by the employees when applying for a Conciliation Board as to the procedure taken by the Management to prevent a walk out by the employees on August 5 and thus avoid breaking the agreement between the Employers and Employees was proved in evidence given before the Board to be absolutely correct. Dealing now with the grievance itself. The so called "New Contract System," referred to above, is a system whereby the Company enters into an agreement with one or more of its employees for the performance of a specified piece of work. It is stated by the Company that this practice has been in force for many years, but the men contend that the contract forming the basis of their grievance opened up a new mine, in which case under clause 7 of the agreement, two members of the Agreement Committee shall be selected to discuss operating conditions with the Company. There was, however, no evidence produced in support of this statement. On the contrary, that no "new contract system" was adopted, but that an old practice provided for by the Agreement of November 21, 1934, under the heading of "Machine Coal," page 7, was again introduced was, in my opinion, fully proved by the straight forward evidence given before the Board by Messrs. Bobby Brown, Victor Frelone, Peter Wilkinson and John Murdock—witnesses called by the Employees. Mr. Bobby Brown produced the contract complained of, and explained its conditions with which he and those working with him were fully satisfied. Mr. Brown also stated that this contract is similar to many others which have been entered into in the past, is in accordance with good mining practice throughout the coal industry, and that its terms and conditions fully complied with the Agreement between the Company and its employees, dated November 21, 1934.

#### *System of Rotation:*

From the foregoing, the question naturally arises as to why all the employees were not reinstated on the resumption of work on August 12 who were engaged when work ceased on August 6. The answer is as follows:—

For some weeks prior to August 6 the Company on its own initiative installed a partial system of rotating its employees for the purpose of giving employment to as

many men as possible. In practice this system was found unfair to many men out of work, inefficient so far as the production of coal is concerned, unsatisfactory to many of the employees on the payroll and also dangerous.

Any complete and equitable system of rotation should provide for all employees temporarily off the payroll due to shortage of work, ill health or other causes beyond their control. With some 400 coal operators living in the neighbourhood of Cumberland and Nanaimo out of work with just as much right to work in the coal mines controlled by the Canadian Collieries as any other of their employees it is obviously impossible to introduce any system of rotation which would provide for them all, as there are only some 400 men now working in the mine at Cumberland and a partial system of rotation must involve discrimination which is, of course, distasteful to both the Company and its employees. A further 130 men are employed at Cumberland in miscellaneous services, railroad docks, workshops, etc.

The system of rotation even when partially adopted led to inefficiency, due to the fact that the coal mining industry involves many entirely different classes of occupation and it is in some instances dangerous and in all instances inefficient to employ a man accustomed to one class of work on an entirely different class of work. In the particular case with which we are dealing there are only 26 men out of work, whom it is suggested should be re-employed, and it may therefore well be that not one of them is suitable for any particular vacancy which may occur. And further, the willingness of the employees to sacrifice themselves for the welfare of the unfortunate few is by no means universal. The Company found during the brief period the partial system of rotation was in force, that numerous complaints were forthcoming from the employees as to the dates and duration of the idleness suffered by them for the benefit of some of their fellow employees. The mine at Cumberland is highly charged with gas, necessitating the utmost care on the part of the Management in the selection of its employees for different classes of work.

Under these circumstances the Company had already decided to abandon the partial system of rotation, and regret that it was ever introduced. They, therefore, when work was resumed on August 12, announced that only as many men would be reinstated as were required to operate the mine at the date of its reopening.

### *Clause 58 of the Industrial Disputes Investigation Act:*

The employees claim that under the above clause the Company should have reinstated all the men on the Company's payroll at August 5, immediately they, the employees, requested the Minister of Labour for the formation of this board on September 10, 1935. I have not sufficient legal knowledge to say whether the employees' contention is correct or not, but it appears to me that Section 58 only applies to a dispute over wages and hours which was not the contention in the case under review.

### *Conclusions:*

My conclusions briefly are:—

1. That no useful purpose can be served by any further attempts at conciliation.
2. That the employees did not comply with the terms of the Agreement of November 21, 1934, when they ceased work on August 6 instead of submitting their grievance through their Grievance Committee to the Company.
3. That the mine employees rendered themselves liable to dismissal under the Special Rules established under Section 92 of the Coal Mines Regulation Act of British Columbia 1911, Sections 2 and 122. Copy of the Special Rules is attached.
4. That no "new contract system" was introduced, but that an old practice was reintroduced and that such practice was fully provided for by the Agreement of November 21, 1934.
5. That no system of rotation can be devised which will prove equitable to all concerned, that dissatisfaction amongst a large number of the employees would be continuously in evidence, and that it is inefficient so far as the producing of coal is concerned.

(Sgd.) GEORGE KIDD.

In order to make a full report to the Honourable the Minister, called for by Sections 26 and 27 of the Act, the Chairman and such member or members of the Board as join with him in his conclusions beg to report that the foregoing reports set forth the various proceedings and steps taken by the Board for the purpose of fully and carefully ascertaining all the facts and circumstances brought to the Board's attention during the course of this reference. It only remains therefore on such facts and circumstances to make findings therefrom, including the cause of the dispute and the Board's recommendation for the settlement of the

dispute according to the merits and substantial justice of the case.

The Chairman finds it impossible to reconcile the views and findings of his two fellow members of the Board. Their reports disclose such divergent views and conclusions that the Chairman is compelled to review the thirteen causes or points of complaint and alleged matters in dispute, from the evidence, arguments, interpretations, efforts at conciliation and all matters surrounding this reference, and make finding and recommendations accordingly.

Dealing with these points *seriatim* as set out above, the Chairman would have the Board report as to:

*Point 1.*—That Section 58 of the Act did not apply to this enquiry at the stage at which reference or reliance of this Section was introduced. The thirty days' notice mentioned in the Section was not given by either Employer or Employees. There was not a desired change effecting conditions of employment of protesting Employees with respect to Wages or Hours. The Employer did not make effective any proposed change in wages to the detriment of the Employees, while a dispute is being dealt with. Apart from this interpretation of the Section, no effect can be given to the Section until the Board arrived at a decision as to whether or not anything in the nature of a "Lockout" or "Strike" had occurred and the responsibility for same is placed by the Board. In any case neither party to this dispute used this provision of the Act for the purpose of unjustly maintaining a given condition of affairs during investigation. A condition of affairs arose before the application for the appointment of this Board and this condition is still maintained.

*Point 2.*—We would report that the Employer on August 2, 1935, did not introduce a New Contract System contrary to the agreement of November 21, 1934. The contract entered into with certain Employees was strictly within the terms of the existing agreement and was in accordance with the custom and practice which had existed for quite twenty years between Employer and Employees.

*Point 3.*—The Agreement between parties did not call for any consultation between Employer and the Grievance Committee of the Employees before putting men on piece work as per contract instead of day labour unless possibly there was a cut in the rate of wages provided in Agreement. The contract of August 2 provided an increase of earnings to the contractors and those Employees associated with them as co-workers,

and should therefore be a source of congratulation rather than a cause of complaint or dispute.

*Point 4.*—The Employer did not notify the Grievance Committee of this new contract. If it was something that the Employees could complain about it was for the Employees to bring it to the attention of the Grievance Committee and this they did not do, and the Employer was only continuing the piece work system as against day work to the advantage of working Employees and within the terms of existing agreement.

*Point 5.*—The question of discrimination, if any, arose among the workers themselves. The men working under the contract had the right to choose their own mates according to twenty years custom, and it would appear that because certain men were not included among those working at piece work and therefore deprived of enhanced earnings over and above agreement rates of wages, the subsequent trouble arose between parties. The men who were not taken on as mates or put on piece work would gladly have been included among the piece workers on the increased wages and other benefits that would follow.

*Point 6.*—There is no evidence that the piece work system under the contract of August 2 when brought into effect was dangerous for gas. Our impression gathered was that conditions would on the contrary be improved if anything.

*Point 7.*—We find that the attitude of the Employer's Superintendent while pre-emptory and abrupt was not dictatorial towards the Grievance Committee. In view of the findings above the so-called new contract was in no sense the business of the Grievance Committee. The Committee assumed an attitude of a right to dictate and interfere which the agreement between parties did not justify.

*Point 8.*—We find and would report that the Employees did go on strike on August 5 and 6, 1935, within the definition of a "strike" provided in the Act, and that this strike was the cause of the Employees being out of employment between August 6 and 12, 1935, and was in effect the substantial cause for this dispute and investigation.

*Point 9.*—Having found there was no lock-out it follows that the course adopted by the Employer was not for the purpose of forcing the Employees to accept a new contract system. It would rather appear that the strike was used for the purpose of forcing the Employer to accept the Employees' dictation that they must all be put on the piece work system or that the piece work system should be abolished.

*Point 10.*—We cannot find that the rotary or rotation system has been or can be successfully continued and adopted in the like interests of the Employees and Employer. In any case it would appear that whether or not the rotary system is suitable to the conditions prevailing at Cumberland and in the Employer's mines is for the Employer to decide. To decide otherwise would practically mean that the Employer would have to hand over the business and economic management of its affairs to its Employees.

*Point 11.*—The evidence and our finding are not that the Employer is hostile to "Collective Bargaining." On the contrary, the existing agreement above referred to is the best possible evidence of the Company's approval of the system of collective bargaining. The Employer has approved of collective bargaining for many years, willingly accepting the principle and dealing with its Employees through written agreements and a Committee representing the Employees.

*Point 12.*—We find and report that the Employer has lived up to its existing agreement with the Employees in every respect and stands ready and willing to make a new agreement on like lines or to continue the existing agreement.

*Point 13.*—We cannot make any findings which will reinstate the 26 men claimed to be discriminated against, but whom we have to find on evidence and facts were not discriminated against but were rather the victims of conditions brought about as above by the Employees themselves through their Grievance Committee.

The threat in this complaint to the effect that the Employees "have no other alternative than to resort to strike action in order to get justice" is in our view entirely in accord with the consistent action of the Grievance Committee in promoting this dispute and misleading their fellow Employees by making them believe that the Company has departed from its agreement, is hostile to collective bargaining and is discriminating against day workers when the contrary abundantly appears from all the evidence, facts and circumstances disclosed on this reference.

Our findings on these thirteen claims of complaint on the part of the Employees being thus definite it only remains for us to make recommendations looking to a settlement of the dispute.

It is difficult to find a way out of the tangle that the Employees have got themselves into, without requiring the Company to do something which it is not called upon to do, and which it cannot well do under

existing industrial and financial conditions without impairing the coal mining industry and the future of the Company as an Employer of labour and of all of which it must necessarily be the best judge.

We can therefore only recommend that the Employees withdraw from their present untenable position, appoint a new Committee to negotiate a continuance of existing or amended agreement with the Employer and withdraw from their present threatened "strike" attitude. We appreciate that this attitude may be the view of an over zealous Grievance Committee, mistaken in their understanding and interpretation of existing agreement rather than the attitude of Employees generally towards the Employer. (The feeling of the Employer and this Board is distinctly sympathetic towards all the many unemployed miners on Vancouver Island.)

On the part of the Company we would recommend that its favourable attitude to "collective bargaining" be emphasized and made clear to all its Employees, and that

it carry out their assurance that it will put the Employees in question back to work without discrimination at the earliest possible moment, speeding up production and the need for more employees in every way consistent with the condition of our coal industry and the best interests of the Company, its Employees and the good governmental supervision of the Canadian unemployment and relief situation.

Submitted with deference and the added word that if this Board has overlooked any matter on which it should report or if it can be of further service to the Honourable the Minister of Labour or his Department, we hold ourselves at his service.

We have the Honour to be,

Yours faithfully,

(Sgd.) J. A. RUSSELL,  
*Chairman.*

(Sgd.) GEORGE KIDD,  
*Member of the Board.*

December 24, 1935.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of two cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the *LABOUR GAZETTE*, November, 1935, page 995, and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board) to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the man-

agement and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

#### Case No. 157.—Operating Department (Central Region)

This case concerned the claim to have the position of lampman at Capreol, Ontario, filled by an employee holding seniority rights under the schedule for "clerks and other classes of employees."

The employees contended that the position of lampman at Capreol was filled by an employee holding seniority rights under the maintenance of way employees' schedule, whereas it should have been assigned to an employee holding seniority rights under the schedule for "Clerks and other Classes of Employees," as the position of lampman is enumerated under such designation.

The contention of the railway was that there has never been a position classified as "lampman" in the Capreol yard, as the work of attending to switches and switch lamps in that yard has always been taken care of by an em-

ployee holding seniority rights under the schedule governing Maintenance of Way Employees.

The railway considered that there has been no change made in the assignment and performance of these duties since the present incumbent of the position in question was assigned to this work six years ago; that while "lampmen" are shown in the general classification of employees in Article 1, Rule (a) Section 3 of the schedule for "Clerks and other Classes of Employees," in no yard in the Northern Ontario district has such a position ever been set up in the schedule referred to; and further that the schedule governing Maintenance of Way Employees does recognize the right of employees embraced under that schedule to perform work attendant upon the care of switch, semaphore and yard limit lamps.

It was further pointed out by the railway that "in event that an employee holding seniority rights under the schedule for 'Clerks and other classes of employees' were to be assigned to the work of attending switch lamps alone, in Capreol yard, it would still be necessary to employ a competent trackman to inspect and repair, as required, the 82 switches in question, which would have the effect of needlessly penalizing the company by the amount of the wages of one additional employee in that yard. The work of attending switch lamps exclusively does not require a full-time employee, and as the services of such an employee could not be fully utilized, there is no justification for making any change in established practice on this territory."

The employees withdrew the case.

#### **Case No. 172.—Operating Department (Atlantic Region)**

An employee was classified as a clerk in the superintendent's office at Moncton from August 19, 1929 to November 27, 1931, during which time he was paid as an apprentice clerk in accordance with Article 13, rule "A" of Clerks and other Classes of Employees Schedule. On November 27, 1931, his classification was changed to messenger and his rate of pay reduced to \$45 per month.

The employees contended that this worker entered the superintendent's office at Moncton, N.B. as a messenger in October, 1928, and continued in that capacity until August 19, 1929, when he was promoted to the position of clerk and paid as follows:—First year, \$60.00 per month; second year, \$70.00 per month; and third year, \$87.50 per month.

The clerk's duties, as outlined in the employees' statement consisted of the opening, sorting and delivery of mail to respective offices and desks, handling of files, etc.

Since his reduction in salary from \$87.50 to \$45.00 per month, the employees contend that

he was required to perform the duties enumerated above, together with the following: Mimeograph work, such as making copies of forms and circulars, sending out mail, delivering telegrams, etc., and the general messenger work around the office.

The employees considered that Article 11 rule (a) had been violated and that he was entitled to payment at the schedule rate of clerk dating from 45 days prior to January 3, 1935, when he first presented his claim to his superintendent.

In its statement, the company declared that on November 27, 1931, the clerical position in the superintendent's office at Moncton occupied by this employee was abolished, whereupon the employee exercised his seniority by displacing a messenger at the rate of \$45 per month.

The company further contended that the looking up of files and putting them away is messenger work and does not justify classification as a clerk.

The Board referred the case to the disputants for further negotiations and, as a result a satisfactory settlement was reached.

---

"There is no foundation for the common belief that the Indians of Canada are a vanishing race," according to a statement by the Deputy Superintendent General of Indian Affairs in the Annual Report of the Department of Indian Affairs recently published. The report adds that: "The census which is taken at five-year intervals has shown a substantial increase in each of such periods during the past fifteen years at least, and the statistics may now be regarded as reliable."

It is pointed out that from the standpoint of ordinary disease and accident the year under review was a healthy one, there being no widespread epidemics of communicable diseases.

In this respect the Deputy Superintendent observes: "The relative absence of controllable communicable diseases among Indians is not a matter of chance or good fortune, it is the result of constant vigilance on the part of Indian Agents, departmental medical officers, and other employees in the field"

---

Reports of various committees which were presented at the third biennial meeting of the Canadian Hospital Council (LABOUR GAZETTE, October, 1935, page 886) have recently been published in bulletin form. These reports deal with the following subjects: Construction and equipment; nursing and nurse training; medical relations; administration; hospital finance, scientific principles of collection; hospital legislation; public relations; tuberculosis in the nursing profession, and small hospitals.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1935

The following table shows the number of disputes, workers involved and time loss for December, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec., 1935.....	8	1,745	5,718
*Nov., 1935.....	13	2,133	24,733
Dec., 1934.....	8	340	1,875

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

As is usual in December, the number of disputes, and of workers involved, and also the time loss incurred were lower than in November. The number of workers and the time loss, however, were higher than a year ago, owing to the continuance for a few days into December, of the strikes involving large numbers of longshoremen and other water transport workers in Vancouver and other ports in British Columbia which began in June. These were the only disputes of importance in both November and December; and in December last year there were no disputes involving large numbers of employees for any considerable time.

Six disputes, involving 1,550 workers, were carried over from November and two disputes commenced during December. Of these eight disputes, seven terminated during the month, four resulting in favour of the employers involved, one in favour of the workers concerned, a compromise settlement being reached in one case, while the result of one dispute was recorded as indefinite. At the end of December, therefore, there was on record one dispute recorded as a strike or lockout, namely: truck drivers, Winnipeg, Man.

The record does not include minor disputes such as are defined in a previous paragraph,

nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer. The dispute involving printing compositors employed in two establishments in Winnipeg, Man., commencing April 7, 1935, and that involving motion picture projectionists in two establishments in Winnipeg commencing September 1, 1935, both of which have been carried in the above list for some time, are recorded as having lapsed by the end of December and have consequently been removed from the list.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A cessation of work for one day, December 23, by about seven hundred employees of three asbestos mining companies at Thetford Mines, P.Q., has been reported in the press as a strike. Reports from the representatives of the employees and from the employers indicate that there was no dispute, the workers taking the day off to demonstrate their regard for the chaplain of their union who was transferred to another parish.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**CUSTOM TAILORS, TORONTO, ONT.**—This dispute commencing on October 29, caused by the refusal of increases in piece rates, was settled on December 10, a ten per cent increase in wages being given for some work. Four of the strikers resumed work, the employer refusing to re-employ the others, temporary employees. Early in November the resident representative of the Department, with the Fair Wage Officer of the City of Toronto, had attempted to bring about a settlement but the employer refused to make any wage increases.

**OPTICAL WORKERS, TORONTO, ONT.**—In this dispute, involving 114 opticians and mechanics in seven optical manufacturing establishments since November 14, the employers secured about twenty-five new workers and a number of the strikers resumed work from time to time so that by December 21, all that were re-

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1935\*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to December, 1935.</b>			
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Valley Junction, P.Q.	36	216	Commenced Nov. 11, 1935; against discharge of workers; lapsed by Dec. 7, 1935; indefinite.
<i>Textiles, Clothing, etc.—</i>			
Custom tailors, Toronto, Ont.	6	42	Commenced Oct. 29, 1935; for increased wages; terminated Dec. 9, 1935; compromise.
<i>Miscellaneous—</i>			
Optical workers, Toronto, Ont.	50	500	Commenced Nov. 14, 1935; for increased wages, recognition of union and changes in conditions; terminated Dec. 21, 1935; in favour of employers.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Longshoremen, Vancouver, B.C.	700	2,000	Commenced June 5, 1935; against cancellation of agreement; terminated Dec. 7, 1935; in favour of employers.
Coastal longshoremen, ships' crews, ship liners, boom log workers, etc., Vancouver, Victoria, New Westminster, Chemainus, etc., B.C.	733	2,000	Commenced June 15, 1935; in sympathy with longshoremen on strike from June 5, 1935; terminated Dec. 7, 1935; in favour of employers.
<i>SERVICE—</i>			
<i>Business, etc.—</i>			
Hotel employees, Toronto, Ont.	25	200	Commenced Nov. 12, 1935; for increased wages and reduced hours; lapsed by Dec. 31, 1935; in favour of employer.

<b>MINING, ETC.—</b>			
Coal miners, Robb, Alta. ....	70	560	Commenced Dec. 3, 1935; for increased wages; terminated Dec. 11, 1935; in favour of workers.
<b>TRANSPORTATION—</b>			
<i>Local—</i>			
Truck drivers, Winnipeg, Man.	125	200	Commenced Dec. 30, 1935; for increased piece rates and changes in conditions; untermiated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

quired had returned to work without securing any of their demands. The employers stated that the others would be taken back when required.

**LONGSHOREMEN, VANCOUVER, B.C.**—As stated in the December issue of the *LABOUR GAZETTE*, this dispute was called off by the Vancouver and District Waterfront Workers' Association, affiliated with the Longshoremen and Water Transport Workers of Canada, on December 9. The strikers had been replaced to a considerable extent by the beginning of July. About one hundred of the strikers resumed work during July, another hundred by September, and fifty later. A Royal Commission, appointed in accordance with Section 65 of the Industrial Disputes Investigation Act, reported on the dispute on October 22 (*LABOUR GAZETTE*, November, 1935, pp. 982-995). During the unsuccessful negotiations from time to time the employers had offered to take back the strikers as required and a substantial number were given work when the strike was called off.

Wages and working conditions were substantially the same as under the agreement before the dispute. Early in December five of the strikers were sentenced to imprisonment for one month on charges of rioting on October 25, in connection with picketing.

**COASTAL LONGSHOREMEN, SHIP'S CREWS, SHIP LINERS, BOOM LOG WORKERS, ETC., VANCOUVER, VICTORIA, NEW WESTMINSTER, CHEMAINUS, ETC., B.C.**—The strike of various classes of water transport workers in sympathy with the strike of longshoremen at Vancouver was called off on December 9. As in the case of the longshoremen, most of the strikers had been replaced some time before.

**HOTEL EMPLOYEES, TORONTO, ONT.**—This dispute, involving cooks, maids, etc., in one hotel in Toronto, demanding increased wages and reduced hours, is recorded as lapsed by the end of December. Early in December one striker was acquitted of a charge of assault in connection with picketing.

**COAL MINERS, ROBB, ALTA.**—Employees of one company ceased work from December 3 to December 12, negotiations regarding an increase in wages not having resulted in a settlement. An agreement between the employer and the United Mine Workers of America terminating March 31, 1935, extended to May 31, 1935, had provided that wages should be changed in accordance with changes in the Drumheller district. When a five per cent wage increase became effective in that district in September following the award of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act the union asked for a similar increase. The western representative of the Department conferred with the parties to the dispute. The employer agreed to make the increase when other mines in the Coalspur district did so. An agreement was signed for one, making the increase effective from November 1. The employer applied for a Board under the Industrial Disputes Investigation Act on November 28 but the employees ceased work from December 3. On December 4 the other principal mining company in the district agreed to the increase in wages. Further negotiations

between the parties to the strike resulted in an agreement being signed, providing for the wage increase effective from November 15. The union, however, contended that the increase should be effective from November 1 and the agreement provided that this should be determined by a Board under the Industrial Disputes Investigation Act or by reference to an impartial chairman under the clause in the agreement as to the settlement of local and general disputes. Work was, therefore, resumed on December 12.

**TRUCK DRIVERS, WINNIPEG, MAN.**—Truck drivers, operating their own trucks in the delivery of coal and wood for various dealers in Winnipeg, ceased work on December 30, demanding an increase in rates of pay per ton and per cord. They also demanded the elimination of screening and sacking of coal by the drivers. One of the dealers agreed to these proposals before the cessation of work and some of the others shortly afterwards. At the request of the strikers the provincial Deputy Minister of Labour had called the employers into conference but a settlement was not effected.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1935, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in November was 52 and 17 were still in effect from the previous month, making a total of 69 disputes in progress during the month, involving 26,600 workers, with a time loss of 210,000 working days for the month. Of the 52 disputes beginning in November, 3 were over demands for increases in wages, 3 over proposed wage reductions, 8 over other wage

questions, 18 over questions respecting the employment of particular classes or persons, 15 over other questions as to working arrangements and 2 over questions of trade union principle. Three stoppages were due to sympathetic action. During the month, settlements were reached in 50 disputes, of which 15 were settled in favour of workers, 21 in favour of employers and 14 resulted in compromises; in two other disputes, work was resumed pending negotiations.

A sympathetic strike involving 5,000 coal miners in the Pontefract district which began November 5, was in sympathy with workers involved in a dispute at a neighbouring colliery; work was resumed December 3 on the advice of the union.

A lockout of 4,000 dock labourers which indirectly affected 1,000 maintenance men at the docks at Glasgow was in effect from November 19 to November 21, to enforce the observance of the national agreement as to the settlement of disputes. The result of the stoppage was that the workers undertook to observe the agreement.

### United States

The number of disputes beginning in September was 135 and 140 were still in progress from the previous month, making a total of 275 disputes in progress during the month, involving 518,000 workers with a time loss of 2,970,000 working days for the month.

## DEPARTMENT OF LABOUR OF CANADA

### Annual Report for Fiscal Year Ending March 31, 1935

THE annual report of the Department of Labour, recently issued, describes the various activities of the Department during the fiscal period from April 1, 1934, to March 31, 1935, in the administration of the following Acts: Labour Department Act; Conciliation and Labour Act; Industrial Disputes Investigation Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; Old Age Pensions Act; The Relief Act, 1934 (with a recapitulation of disbursements under relief legislation in 1930, 1931, 1932 and 1933); and Government Annuities Act.

Another feature of the department's work is its administration of the Fair Wages Policy of the Dominion Government. In addition, the Department is charged with certain duties attendant upon Canada's membership in the International Labour Organization, League of Nations.

#### Industrial and Economic Conditions

Prefacing the review, is the report of Mr. W. M. Dickson, the Deputy Minister of Labour in a survey of the year's advance. The Deputy Minister indicates "a substantial net improvement in the employment situation" as shown by statistics compiled by the Department and the Dominion Bureau of Statistics. The percentage of unemployment among trade unions stood at 16.7 on March 31, 1935, as against 19.5 on the same date in the previous year.

These percentages are worked out for each month and the average of the percentages for the fiscal year 1934-35 was 17.6, compared with 21.1 per cent for 1933-34. Thus, the average improvement was 3.5 per cent of the total of the membership covered. The employment index numbers compiled by the Dominion Bureau of Statistics stood at 93.4 on April 1, 1935, compared with 91.3 on April 1 a year before. These index numbers are based upon monthly reports submitted by about 9,000 establishments with aggregate staffs (April 1, 1935) of approximately 875,000 employees. The figures over the year 1934-35 gave a monthly average of 97.0 points, as against 86.7 points for the year before, an improvement of 10.3 points in employment in general industry, or an average increase of 12 per cent contrasted with the year 1933-34.

The index number maintained by the department depicting changes in the cost of living fluctuated within narrow limits during the fiscal year, and was somewhat lower at the

end of the twelve months than at the beginning.

Wages rates in 1934 showed a slight upward movement in manufacturing and a pronounced increase of 20 per cent in logging and saw-milling. In the last mentioned industries wage rates had fallen 35 per cent between 1929 and 1933. In the other principal industries the trend was to a small extent downward, building trades averaging 23 per cent below 1930 levels and the majority of the other industries about ten per cent. Owing to short time operations in many trades, average earnings per year would show proportionately greater decreases.

After dealing with the amendment in the Fair Wages Policy of the Dominion Government (applicable to federal contracts for the manufacture of fittings and supplies) whereby a fixed wage rate was established for unskilled workers, the deputy's report reviews the social legislation that was introduced in Parliament during the early part of the 1935 session and which has since been enacted.

#### Labour Department Act

The section of the report dealing with the Labour Department Act, under which the department operates, details the co-related phases of activity under this statute. This Act provides that, with a view to the dissemination of accurate statistical and other information relating to conditions of labour, the department shall "collect, digest, and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the LABOUR GAZETTE, which shall contain information regarding conditions of the labour market, and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the minister."

In accordance with this provision, statistical and other information relating to labour conditions has been collected and analysed by the department since its establishment in 1900 and published in the LABOUR GAZETTE. In addition to the monthly publication of the LABOUR GAZETTE, which was one of the original functions of the department, a comprehensive annual report on Labour Organization in Canada is compiled and published by its Labour Intelligence Branch. The

department also issues annually a report on Labour Legislation in Canada, containing the text of labour laws enacted by the Parliament of Canada and by the provincial legislatures. A complete reference library on labour and kindred subjects is maintained by the department and serves as a centre for its research activities.

Statistical and other information as to strikes and lockouts, changes in prices and the cost of living, wages and hours of labour, industrial agreements and industrial accidents is collected and compiled by the Statistical Branch of the department and published in the LABOUR GAZETTE, or in special supplements thereto. The information as to wages is used also in connection with the administration of the Fair Wages Policy in Dominion Government Contracts, and for the determination of wages for certain classes of Dominion Government employees on prevailing rates under the Civil Service Act, data being furnished to the various departments for this purpose as required. The information collected and compiled is further used in connection with the settlement of industrial disputes and negotiations for agreements as to wages and working conditions not only by conciliation officers of the department and Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, but also by employers and employees who secure on request, regularly, or from time to time, special compilations for this purpose. The department also receives numerous requests for such information from persons interested in the information from persons interested in the establishment or development of industries and those engaged in the study of labour and social problems.

### Conciliation and Labour Act

During the fiscal year ending March 31, 1935, the services of the Department of Labour were utilized in connection with the adjustment of a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent, or there was difficulty in carrying on negotiations in connection with wages and working conditions. The proceedings were under the provisions of the Conciliation and Labour Act, chap. 110, R.S.C. 1927, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming within the scope of the Industrial Disputes Investigation Act, namely, mines and certain

public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under that statute.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal, while the headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

A list of the more important cases is given in the report. These have been detailed quarterly in the LABOUR GAZETTE.

### Fair Wages Policy

The report gives full information as to the provisions for the payment of fair wages in connection with work under government contracts. (Similar information is given each month in the LABOUR GAZETTE). The Fair Wages policy was originally based on a resolution adopted by House of Commons in 1900, and amended in 1922, and on the "Fair Wages and Eight-Hour Day Act, 1930" (LABOUR GAZETTE, April, 1930, page 383). This Act provides for the observance of current rates of wages and contains the proviso that in all cases the wages to be paid shall be "such as are fair and reasonable" and, further, that the working hours shall not exceed eight a day, except in special cases as the Governor in Council may otherwise provide, or in cases of emergency.

As already mentioned, there was a change in the Fair Wages Policy pertaining to the provisions relative to federal supply contracts (LABOUR GAZETTE, January, 1935, page 24).

During the fiscal year under review the Department of Labour prepared fair wages conditions for use in connection with 374 building and construction contracts which were to be executed by various departments of the Government as follows: Canadian Radio Broadcasting Commission, 2; Fisheries, 3; Indian Affairs, 2; Interior, 8; Marine, 33; National Defence, 26; National Research Council, 3; Public Works, 283; Railways and Canals, 2; and Royal Canadian Mounted Police, 12.

With respect to contracts for the manufacture of governmental supplies, the greater number of contracts of this nature placed during the year were by the Department of National Defence, to cover the requirements of the military and naval forces and also of the Unemployment Relief Camps which are op-

erated by that department in different parts of the country for single homeless men. The Department of Labour co-operated closely with the Department of National Defence in ensuring the observance of the proper labour conditions on these contracts; also with the Post Office Department with respect to the numerous orders placed by them.

### Industrial Disputes Investigation Act

Included in the Department's review is the twenty-eighth annual report of the Registrar of Boards of Conciliation and Investigation, covering proceedings under the Industrial Disputes Investigation Act for the fiscal year ended March 31, 1935.

The feature of the record of the Industrial Disputes Investigation Act for the fiscal year 1934-35 is the small proportion of boards to applications. While the department dealt with sixteen applications received during that period, together with one application carried over from the preceding year, only two Boards of Conciliation and Investigation were established, one of which dealt with two applications. There was, however, considerable departmental procedure in connection with the other cases; in no instance did a strike occur where, for any reason, a board was not granted.

Applications under the terms of the Industrial Disputes Investigation Act from its inception on March 22, 1907, to March 31, 1935, numbered 818, and Boards of Conciliation and Investigation were established in 538 cases. A few of these boards dealt with two or more applications. The cases in which boards were not granted were either settled by agencies other than those provided by the Industrial Disputes Investigation Act, or it was found that the machinery of the statute could not be utilized. In only thirty-eight cases was the cessation of work which threatened not averted, or the strike which had been already entered upon not ended, as a result of board procedure.

### Government Annuities Act

The growing interest in Canadian Government Annuities by wage earners and, in fact, all classes of persons throughout the country, was strikingly evidenced during the financial year by the remarkable increase in the sale of annuities, 3,930 Canadians having utilized this medium afforded by the Dominion Government for making provision for old age, as compared with 2,412 in the preceding year, while purchase money received totalled \$13,376,400.02, an increase of \$6,304,961.02 over 1933-34.

### Employment Offices Co-Ordination Act

The functioning of the Employment Service of Canada under the Employment Offices Co-ordination Act is described in a chapter of the department's report.

The Department of Labour does not itself operate any public employment offices, but, through the device of paying subventions to the provinces, as provided in the Act, encouragement is given to the Governments of the several provinces to operate such offices on a uniform basis. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are commonly considered as a single organization known as "The Employment Service of Canada."

In the report for the year the various phases of activity are all outlined under such subdivisions as: Specialized employment work on behalf of handicapped ex-service men; location of employment offices; the Employment Service and immigration; Statistics—Employment Office and trade union unemployment; labour mobility; and the Employment Service and unemployment relief.

Statistical information covering the field of employment is regularly collected and compiled by the Employment Service Branch and published in the LABOUR GAZETTE. These statistics are of two classes: (a) administrative statistics, showing the work performed by the employment offices, based on daily reports received from them; (b) statistics based on monthly reports on unemployment, received from local trade unions. In addition the LABOUR GAZETTE publishes each month index numbers of employment in industry and reports on building permits issued, which are collected by the Dominion Bureau of Statistics, in accordance with the Statistics Act. The report contains tables giving full particulars of the work of the Branch during the year.

### Technical Education Act

For the purpose of assisting the provinces in their efforts to develop vocational education, the Dominion Parliament, in 1919, passed the Technical Education Act, voting a sum of ten million dollars to be expended over a period of ten years.

As has been pointed out in previous annual reports, Ontario is the only province which had been able to earn its entire allotment during the ten-year period, and in order that the remaining eight provinces might have a further opportunity to earn the balance of the money originally allotted to them, the Act was ex-

tended at the 1929 session of parliament for a term of five years.

At the end of the five-year extension there were still three provinces, viz., Saskatchewan, Manitoba, and Nova Scotia, which had not been able to take full advantage of their apportionments, and in order that these three provinces might not be deprived of any part of their original appropriations, the Act was again extended at the 1934 session of Parliament for another five years. These three provinces will, therefore, continue to be reimbursed for expenditures made under the terms of the Act, and amendments thereto, up to amounts still to their credit, provided that the amounts are earned prior to March 31, 1939.

### Old Age Pensions Act

Old Age Pensions continued to be paid during the fiscal year in the provinces of British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Nova Scotia, and Prince Edward Island, and in the Northwest Territories, the total expenditure in pensions being \$19,999,055.85, of which amount \$14,942,459.36 was contributed by the Dominion Government. The number of persons receiving pensions was 101,051, an increase of 14,178 during the year.

An important part of the administrative function of the Dominion Government in carrying out the provisions of the Old Age Pensions Act involves accounting control and supervision, and, in order to avoid duplication of departmental activities and to secure centralization of responsibility, an Order in Council was adopted on March 1, 1935, transferring the administration of the Act from the Department of Labour to the Department of Finance as from the first of April, 1935. No further report on the administration of the Old Age Pensions Act will therefore be made by the Department of Labour.

### Combines Investigation Act

The report contains the 12th annual report of proceedings under this Act. The statute provides for investigation of trade combinations, prices or monopolizing, controlling or otherwise restraining trade. Formation or operation of such combines against the public interest is made an indictable offence. The statute provides for the instituting of inquiries by the Registrar of the Combines Investigation Act on application by six or more persons or on the initiative of the Ministry of Labour or the registrar. If preliminary inquiry discloses evidence justifying further investigation, such investigation may be conducted by the registrar or by a commissioner specially appointed by the Governor in Council. Prose-

cution of combines may be instituted by the Attorney General of a province or by the Solicitor General of Canada.

The proceedings under the Act are reported in the LABOUR GAZETTE. Approximately fifty new cases were handled under the Act since the last annual report. No major investigations were concluded during the year, the two chief inquiries instituted being in progress at the close of the period. As in previous years, various less extensive investigations included preliminary inquiries into alleged practices in manufacturing and distribution similar to those outlined in earlier annual reports.

### Relief Measures

The report gives particulars of the work carried on under the various Relief Acts which provided for the relief of distress due to unemployment and other causes. (The report of the Dominion Commissioner of Unemployment Relief of operations under the Act of 1934, as at March 31, 1935, was given in the LABOUR GAZETTE, May, 1935, page 477).

### International Labour Organization

The Department of Labour is entrusted with important duties arising out of Canada's relations with the International Labour Organization, which was established in association with the League of Nations at the close of the Great War, under the authority of the Treaties of Peace, with the object of securing the improvement of industrial conditions by legislative action and international agreement.

As a member state of the Organization, Canada has participated to a considerable extent in its activities, six draft conventions having been approved by Parliament during the 1935 session.

The performance of the duties devolving upon the Department of Labour requires a close study on the part of its officers of the various technical questions figuring on the agenda of the different sessions of the conference and the meetings of the Governing Body, and also of the questionnaires received from the International Labour Office, besides necessarily entailing much correspondence, not only with other departments of the Dominion Government, but with the provinces and with employers' and workers' organizations. Replies have also to be prepared in the Department of Labour to the various questionnaires circulated on behalf of the the International Labour Office.

Since 1924 the Canadian Government has had an advisory officer resident in Geneva, Switzerland, in order to secure close touch with the work of the League of Nations and of the International Labour Organization.

## DOMINION-PROVINCIAL CONFERENCE

### Recommendations Submitted Respecting Unemployment and Relief

WITH a complete representation of provincial premiers, and other members of their governments actively co-operating with the Dominion Prime Minister and his Cabinet, an important Dominion-Provincial Conference was held in Ottawa from December 9-13. The extent and nature of the economic and social problems upon which the Conference concentrated may be judged by the following broad outline of the agenda—

(1) Questions relating to the procedure to be followed in amending the British North America Act.

(2) Questions respecting the financial relations between the Dominion and the Provinces and to taxation.

(3) Questions relating to unemployment and relief.

(4) Questions relating to responsibility for, and co-ordination of, social services.

(5) Questions relating to mining development and taxation.

(6) Questions relating to agriculture and marketing.

(7) Questions relating to tourist traffic development.

The opening plenary session met in the Railway Committee Room, House of Commons, following which the above agenda was allocated among various committees and sub-conferences, the "set-up" of these and their subjects being as follows:—

*Mining Development and Taxation* (Chairman, Hon. T. A. Crerar, Minister of Mines). Discussion—(i) Uniform tax in each of the Provinces; (ii) Dominion mining tax; (iii) Depletion allowances in Dominion and Provinces; (iv) Possibility of fixed rate of taxation for five years; (v) Collection of mining taxes; (vi) Reduction of duties upon implements and machinery used in mineral production; (vii) Legislation respecting promotions.

*Unemployment and Relief* (Chairman, Hon. Norman McL. Rogers, Minister of Labour). Discussion—(i) General unemployment situation; (ii) Question of relief camps; (iii) Question of Provincial and Municipal responsibility; (iv) Division of responsibility for Social Services; (v) Future policy.

*Constitutional Questions* (Chairman, Hon. Ernest Lapointe, Minister of Justice). Discussion—(i) Revision of B.N.A. Act; (ii) Agreement on future action with reference to social legislation.

*Agriculture and Marketing* (Chairman, Hon. J. G. Gardiner, Minister of Agriculture). Discussion—(i) Duplication of administration

affecting agriculture; (ii) General agricultural problem; (iii) Possibility of developing marketing operations in the provinces.

*Financial Questions* (Chairman, Hon. C. A. Dunning, Minister of Finance). Discussion—(i) Refunding; (ii) National Finance Council; (iii) Duplication in taxation; (iv) Interest rates; (v) Interprovincial and Federal co-operation.

*Tourist Traffic* (Chairman, Hon. C. D. Howe, Minister of Railways and Canals). Discussion—(i) National Parks; (ii) National Highways and regulation of traffic; (iii) Co-operation for tourist traffic development.

Featuring the opening plenary session was the address of the Prime Minister, Rt. Hon. W. L. Mackenzie King, who surveyed the problems confronting the country and the objectives of the Conference in relation thereto. (The address of the Prime Minister, together with those of the provincial premiers, was dealt with in the previous issue of the LABOUR GAZETTE.)

The procedure followed by the Conference was that each sub-conference or committee, meet for discussion of the subjects assigned to it, and make its own recommendations in the form of resolutions, which were then received by the final plenary session for submission to the "appropriate administrative and legislative authorities as a foundation upon which such authorities can base effective policy."

### Unemployment and Relief Recommendation

Three reports, embodying resolutions, were presented by the Committee on Unemployment and Relief.

*Registration of Unemployed on Relief.*—The text of the resolution recommending registration of the unemployed on relief was as follows:—

1. Your Committee appointed to consider the registration of the unemployed on relief, beg leave to submit as follows:—

2. Under existing conditions of relief administration, the problem of securing a comprehensive registration as aforesaid, may be divided in the following parts:—

the registration of those on relief, including and differentiating (i) unemployed persons, (ii) unemployables, and (iii) farm and other relief not due to unemployment.

3. By an "unemployed" person is meant any person 16 years of age and over, physically

and mentally capable of work, and available for gainful occupation. By an "unemployable" person is meant any person 16 years of age and over, available for gainful occupation, but physically or mentally incapable of gainful employment.

4. For persons in receipt of relief it is recommended that, for as early a date as may be agreed upon as practicable (say January 31st, 1936) a registration be made by the provincial governments covering as a minimum for each individual on relief the data set out in schedules A, A-1 and B hereto attached, Schedules A and A-1 referring to unemployed and unemployable persons on relief, (these categories, it will be observed, being differentiated on the schedule), and Schedule B referring to persons in receipt of farm (family) relief arising from causes other than unemployment.

5. The registration recommended in the preceding paragraph shall be carried out through the agencies—provincial, municipal and other—already operating in the administration of relief measures. Immediately on its completion a compilation of the results shall be forwarded to the Department of Labour, Relief Administration Branch, according to a uniform plan to be agreed upon showing for the categories designated the numbers on relief by sex, age, conjugal condition and occupation.

6. The registration above described shall thereafter be maintained up to date by the Provincial authorities, and the compilation mentioned in the preceding paragraph shall be forwarded at monthly intervals during the continuance of present arrangements for relief administration.

7. It may be pointed out that for the comprehensive analysis of data such as is contemplated in the foregoing, the compilation of the individual returns by the punch card method is the most efficient. The Dominion Bureau of Statistics will be glad to assist in the application of this method and undertake the compilation for any province which will forward the necessary punch cards. It is suggested that a hand count would suffice for the monthly returns above mentioned, but that an analysis on a thoroughly comprehensive scale should be made annually, say, for date of December 1.

*Future policy of unemployment and relief in Canada.*—The text of the resolutions dealing with future relief policy follow:—

1. That the Dominion Government restrict its services for individuals and families on relief to making provision in association with the Province and the Municipality, for employable men and women with their dependants. In this connection it should be recognized that the Old Age Pension is in the nature of a superannuation for this group on the basis of age.

2. That all those others on unemployment relief who are incapable of self-supporting labour be considered charges upon the municipality and (or) province.

3. That there be established a Dominion Commission on employment and relief with broad functions and powers which would include the following:—

- (a) In co-operation with the provinces and municipalities to carry out as early as possible a Dominion-wide registration and classification of those on relief who are capable of self-supporting work.
- (b) To determine the general standards, regulations and conditions to be met by any province in order to qualify for participation in Dominion funds.
- (c) To co-ordinate public works programs and employment policies on a long-range basis, and establish a general consistency of action.
- (d) To supervise the distribution of funds voted by the Dominion Parliament (and made available by the Governor in Council) for employment and relief purposes.
- (e) To promote the objects set forth in Sections 4 and 5 hereof.

4. That the co-operation of commerce and industry be requisitioned to assist in devising plans under which business enterprises shall make year-round provision for their essential quotas of employees and for the increase of employment. Many industries now recognize that it is unjust and anti-social for business management to produce casualties for public treasuries to take care of, regardless of the wrecking of individual and family life involved.

5. That under government leadership a system shall be devised for the training of youth in habits and techniques of work and industry, and for a thorough and well integrated apprenticeship system.

6. That, in view of the fact that the foregoing program will require considerable time before becoming effective, the Dominion grants to the provinces for relief be substantially increased.

*Dominion-provincial co-operation in the collection of statistics.*—The text of the resolution on Dominion and provincial co-operation in the collection of statistics was:—

That consideration be given to the extent to which there may be more complete co-operation and co-ordination of effort between the federal and provincial authorities in the collection and publication of statistical information, and what further steps should be taken to secure comprehensive and uniform statistics with regard to social and economic conditions in Canada.

## ANNUAL REPORT OF MANITOBA BUREAU OF LABOUR

THE nineteenth annual report of the Bureau of Labour and Fires Prevention Branch, Department of Public Works, of Manitoba, reviews the operations of the branch during the year ended April 30, 1934. In 1931 the Legislature adopted the Department of Labour Act to come into effect upon proclamation, and the enactment became operative from July 16, 1934 (LABOUR GAZETTE, August, 1934, page 722, and September, 1934, page 822).

The present report covers the administration of the following enactments: The Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler and Pressure Plant Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Public Amusements Act (the licensing of cinema projectionists); the Fires Prevention Act; and the One Day Rest in Seven Act.

The administration of the above acts entailed considerable inspection service, and the inspections and orders issued respecting each are summarized in tabular statistics in the report. During the year there was a total of 13,567 inspections, and 4,994 orders issued as compared with 13,613 inspections and 5,790 orders in 1933. Most of the orders issued under the various Acts were for improvements in the interests of safety or health and sanitation, while under the Minimum Wage Act the orders largely concerned hours and wages. Not one case of child labour was found.

In the accompanying table, the number of inspections and orders under each Act during the year are summarized.

*Accidents and Prevention.*—During the year, there was a total of 1,485 industrial accidents of which two were fatal. Of the total number of accidents, 1,469 were in the industrial group; 7 in the building trades; and 9 attributed to elevators. As regards industrial accident prevention the report emphasizes the fact that the majority of accidents are caused "through the personal or human element." In this respect the Bureau outlined its educational program in co-operation with Boards of Trade, Trades and Labour Councils, the Canadian Manufacturers' Association, the Winnipeg Builders' Exchange, and individual employers. Reports of accidents from employers are analyzed and, if the facts warrant,

are also investigated. Recommendations and orders are then based upon the result of the analysis and investigation.

Traffic accidents were dealt with separately. The work of accident prevention in traffic was carried on in conjunction with the Winnipeg Board of Trade and the Manitoba Motor League. First Aid activities were also reviewed.

*Steam Boilers.*—As in previous years, supervision of all steam plants throughout the province was maintained for the purpose of seeing that only properly qualified and licensed engineers are employed in conformity with the Act. A total of 1,172 certificates and renewals were issued, the fees of which amounted to \$2,289.50. The usual details were given of the inspection of steam plants, air tanks, refrigeration plants, etc., and the fees received for same.

*Fair Wages Act.*—The Fair Wage Board held nineteen meetings during the fiscal year in connection with the revision of the schedule for the current year.

*Licensing of Workmen.*—The Board of Examiners under the Electricians License Act, held twenty-four meetings in Winnipeg and issued 210 licences and 71 contractors' certificates. The total collected in fees was \$2,365. Twenty-six tried the examinations to qualify as cinema projectionists as a result of which a total of 15 certificates were issued. Fees for licensing projectionists amounted to \$418.

*Fire Prevention.*—The fire loss for Manitoba in 1933 was \$1,146,000 or \$1.64 per capita as compared with \$1,585,906 or \$2.26 in 1932. Fire prevention methods were summarized and the causes of fires were analyzed. There were six prosecutions for arson during the year and a large number of investigations into fires of suspicious origin.

*General Complaints.*—During the year there were 181 complaints under the several acts administered by the Bureau, all of which were adjusted. These were as follows: Minimum Wage Act, 168; Electricians License Act, 10; the Steam Boiler and Pressure Vessel Act, 2; and the licensing of cinema projectionists, 1.

Summary of Inspections made and orders issued by the Bureau of Labour from May 1, 1933, to April 30, 1934.

Statute	No. of Inspections	No. of Orders
The Manitoba Factories Act.....	1,014	722
The Bake Shops Act.....	52	40
The Shops Regulation Act.....	22	13
The Minimum Wage Act.....	2,448	819
The Elevator and Hoist Act.....	4,551	1,437
The Steam Boiler and Pressure Plant Act.....	3,953	1,354
The Building Trades Protection Act.....	15	11
The Public Buildings Act.....	19	26
The Electricians Licensing Act.....	338	26
The Public Amusements Act.....	224	53
The Fires Prevention Act.....	856	467
The One Day of Rest in Seven Act.....	75	26
Total.....	13,567	4,968

### Minimum Wage Act

Included in the annual report of the Bureau of Labour of Manitoba is the report of the Minimum Wage Board. During the year the Board was engaged on a revision of Regulation 5, covering all workers in hotels, restaurants, clubs, victualling houses and refreshment stands (LABOUR GAZETTE, September, 1934, page 832).

The Year Book of the National Council of Women of Canada has recently been issued. It contains an extensive review of the Council's activities during the year including reports of its provincial presidents, standing and special committees, federated associations and the proceedings of the annual meeting.

Accidents occurring in the use of explosives during the year 1934, resulted in thirty deaths and caused injury to 196 persons according to the report of the Department of Mines for the fiscal year ending March 31, 1935. This represented, the report states, a considerable increase over the casualties sustained in recent years, even when allowance is made for the increase in consumption of explosives, and was most marked in the accidents arising in the course of road construction. Miscellaneous accidents, not directly associated with the use of explosives, caused the death of six persons and injury to 46 during the year 1934. Playing with explosives accounted for 2 of those killed and 32 of the injured, the average annual loss from this particularly regrettable cause, during the five year period preceding, having been 2 killed and 48 injured. These accidents and their causes are discussed in more detail in the Annual Report of the Division.

There were 17 informations laid by the Bureau of Labour during the fiscal year, one under the regulation governing laundries, dry cleaning and dyeing; five under hotels, restaurants, etc.; two under bags; three under retail stores; two under office regulations; and four under the regulation governing boys in the manufacturing industries.

In addition, 230 claims for wages were adjusted and collections effected. Of these 214 were claims of female employees and involved a total of \$1,959.55, while 16 were claims of boys and involved wage arrears amounting to \$133.32.

The number of inspections in Winnipeg under all the orders governing female employees totalled 1,591. These resulted in 377 orders respecting either conditions of work, hours or wages, plus 196 other regulations. Outside of Winnipeg there were 55 inspections and 18 orders issued.

The details of inspection work in connection with the employment of boys under 18 years of age showed a total of 802 inspections with 207 orders and 21 other regulations issued as a result.

The death occurred on December 28, 1935, of J. F. H. Wyse, general manager of the National Safety League for the past twenty-one years. Mr. Wyse joined the Safety League first as an engineer and organizer and was appointed general manager on January 1, 1914. His zealous work in accident prevention was marked by many campaigns and the publication of numerous pamphlets on the prevention of forest fires, safe boating and various methods of resuscitation.

A memorandum has recently been published by the Factory Department, Home Office (Great Britain) on precautions against dangers of poisoning, fire and explosion in connection with the use of carbon bi-sulphide in artificial silk, India rubber and other works.

Production by 35 factories in Canada engaged chiefly in the manufacture of farm implements and machinery was value at \$8,817,756 as compared with \$5,326,416 in the previous year, \$5,510,078 in 1932 and \$11,175,404 in 1931.

Total capital employed amounted to \$55,742,696 as against \$63,903,380 in 1933 and \$73,576,979 in 1932. The average number of employees on the payroll during 1934 was 3,706 with salaries and wages totalling \$3,776,918. In 1933, employees averaged 3,039 and their earnings \$3,047,501.

## WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

### Order Governing Employment in Beauty Parlours

**E**FFECTIVE from December 16, 1935, the Minimum Wage Board of Nova Scotia has issued Order No. 8 governing employment in beauty parlours, etc. in the cities and towns of the province.

*Wages.*—The minimum scale of wages is established for two population groups—cities and towns of 17,000 population or over, and all towns under 17,000 population.

In the larger population group, the minimum wage for experienced workers is \$11 per week with the following scale for inexperienced employees: Beginners, not less than \$7 per week; after 6 months' experience \$8; after 12 months, \$10; after 18 months, \$11.

In the towns under 17,000 population, the minimum wage for experienced workers is \$10 per week with the following scale for inexperienced workers: Beginners, not less than \$6 per week; after 6 months' experience, \$7; after 12 months, \$9; after 18 months, \$10.

In either group, after 18 months an employee is to be considered an experienced operator and paid the minimum rate as such.

Workers are to be paid in cash contained in a sealed envelope on which is designated the number of hours worked, the rate per hour and the amount. No deduction in wages is permitted for any cause or purpose. All employees—time workers, piece workers and those on a bonus system—are subject to the above specified minimum rates.

Any employee required to wait on the premises is to be paid for the time thus spent. If a special uniform is required, this is to be supplied by the employer without cost to the employee.

Other sections of the order are as follows:—

*Hours of Work.*—The work period for which these minimum wages shall be paid, shall be 48 hours per week, or for the usual number of hours normally worked in the establishment if less than 48 hours.

(a) Work in excess of 48 hours per week, shall be counted as overtime, and shall be paid for at not less than the minimum rate fixed by this order.

(b) Work for less than 48 hours per week shall be counted as short time and shall be paid at the minimum rate per hour according to the rates on this order. No reduction below the minimum wage line shall exceed the value of the time lost.

(c) At least one hour for lunch shall be allowed each day.

*Apprentices.*—The number of female inexperienced workers shall not exceed twenty-

five per cent (25%) of the total working force, except when the total working force is less than four.

*Permits.*—The Board may issue permits for lower wages for aged or handicapped workers, it may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or employees are invited to consult the Board regarding any problem which this order may concern.

*Discharge of Employees.*—No employer shall discharge or threaten to discharge or in any way discriminate against any employee, because such employee has lodged a complaint with the Board, or has testified or is about to testify in any investigation or proceedings permitted or prescribed by or taken under the provisions of this Act. All complaints are treated strictly confidential.

*Schools.*—An inexperienced employee who has had three months or more instruction in a School or Hairdressing Establishment or Beauty Parlour, for which a fee has been paid for any occupations governed by this Order, shall start at a rate of an inexperienced employee of "after six months experience" according to the schedule in this Order.

Penalties are provided for violations of the order, and failure for the non-posting of the order carries a \$25 fine.

Production by firms included in the automobile parts and accessories industry in 1934 was valued at \$24,378,762, a gain of 87 per cent over the 1933 value of \$13,001,185. There were 62 lightly establishments reporting 62 being in Ontario. Last year 83 firms were in operation in Canada.

The Alberta Gazette of November 30, 1935, announces the transference of the administration of the following acts from the President of the Executive Council to the Minister of Trade and Industry—The Bureau of Labour Act; The Minimum Wage Act; The Factories Act; The Labour Disputes Act; The Boilers Act; The Employment Offices Act; and The Trade Schools Regulation Act.

The same issue announces that the administration of the Mothers' Allowance Act, which had been transferred from the Attorney-General's Department to the Public Health Department, has now been rescinded and that the former Department will continue to administer mothers' allowances.

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Recent Orders Governing Minimum Wages and Hours of Work

**T**HE British Columbia Board of Industrial Relations, administering the Male Minimum Wage Act, the Female Minimum Wage Act and the Hours of Work Act has recently issued the following orders.

#### Female Minimum Wage Act

*Order No. 24 (supplementary)—mercantile industry*—By a supplementary order the Board ruled that all overtime in excess of 48 hours per week (granted under a regulation pertaining to Christmas trade in the mercantile industry) "shall be paid at rate of time and one-quarter *pro rata* on an hourly basis at not less than the rates set forth in order No. 24 for such overtime worked."

*Order No. 21A (temporary emergency) fruit and vegetable industry*—Effective from December 5, 1935, to March 31, 1936, the Board has ruled that the provisions of Order 21, establishing a minimum wage in fruit and vegetable industry (LABOUR GAZETTE, May, 1935, page 427) "shall not apply to employees packing or sorting products damaged by frost where such packing or sorting is done by the grower of the said products."

#### Male Minimum Wage Act

*Order No. 32—establishing a minimum wage for elevator operators*—Rescinding order No. 19 (LABOUR GAZETTE, March, 1935, page 243)

the Board has issued Order No. 32 establishing the minimum wage for elevator operators as follows:

1. That the minimum wage for every elevator operator eighteen (18) years of age or over that age whose week consists of forty (40) hours or more shall be the sum of fourteen dollars (\$14).

2. That the minimum wage for every elevator operator eighteen (18) years of age or over that age whose week consists of less than forty (40) hours shall be the sum of thirty-seven and one-half cents (37½c.) per hour: Provided, however, that the minimum wage for any such elevator operator in any one day shall be not less than the sum of one dollar and fifty cents (\$1.50).

This order became effective on November 28, 1935.

*Order No. 10 (supplementary)—mercantile industry*—This order made the same provisions respecting overtime rates as in Order No. 24 (above) under the Female Minimum Wage Act.

#### Hours of Work Act

Under the Hours of Work Act, provision was made in the retail and mercantile industry to cope with the seasonal exigencies attendant upon Christmas shopping.

## WORKMEN'S COMPENSATION FOR RAILROAD WORKERS IN THE UNITED STATES

**I**N the American Labour Legislation Review, December, 1935, information is given regarding the movement for workmen's compensation to railroad employees in the United States. Under the Constitution of the United States, the regulation of interstate commerce is within the legislative jurisdiction of Congress while commerce within the bounds of any one state may be regulated by the state legislature. Accordingly the great majority of railroad workers in the United States are outside the scope of the state laws providing for employers' liability or workmen's compensation in case of industrial accidents or diseases.

Bills to provide workmen's compensation for railroad employees have been introduced in Congress but have failed of enactment due to the opposition of certain railroad labour unions. The objections put forward by these unions have been based on the belief

that more adequate compensation can be obtained by bringing a suit for damages against the railroad company concerned. They, therefore, urge that there should be inserted in the Bill a clause giving to railroad employees the right to decide after the injury whether they will take compensation or sue for damages.

This is the position now of two or three of the national Brotherhoods—the remaining dozen-and-a-half of the national transportation unions being favourable to Workmen's Compensation as the exclusive remedy. But the Railway Labor Executives' Association, representing all of the twenty-one transportation unions, acts as a unit in national legislation and has not yet endorsed any specific measure.

In connection with this claim of railroad employees in the United States, certain information is given in this issue of the American Labour Legislation Review, which is of special interest in Canada. In the Canadian provinces of Alberta and Saskatchewan,

certain classes of railroad workers are exempted from the provisions of the Provincial Workmen's Compensation Act providing for a collective liability system through a provincial accident fund built up by assessments on employers to meet the cost of industrial accidents. This exemption of railroad workers was permitted by the Legislatures of Alberta and Saskatchewan at the request of certain railroad labour unions based on similar objections to those of the same unions in the United States. It appears, however, that the majority of the railroad unions are now favourable to a state system of compensation and that an increasing majority of the members of the other railroad unions are coming to view with approval the adoption of a law based on the principles of workmen's compensation rather than on suits for damages.

In the recent report of the United States Federal Co-ordinator of Transportation, it is pointed out that the present liability system of disposing of railroad accidents

takes on many of the aspects of a lottery, from which a few employees draw large sums but from which many receive insufficient amounts. It is this inequity which constitutes the greatest indictment of the system and furnishes the most powerful argument in favour of a reasonable Federal Workmen's Compensation Law.

The Section of Labour Relations of the Office of the Federal Co-ordinator of Transportation made an investigation to determine the average awards made to employees killed or injured in railroad accidents. Summaries of this report by the Director of Labour Relations is given in the United States Monthly Labour Review for September, 1935, and in the American Labour Legislation Review, December, 1935. An analysis was made of all payments by all Class I railroads on accident cases closed out in 1932. Class I railroads are those railroads whose annual operating revenues exceed a million dollars. In 1932 they employed 98 per cent of all the workmen employed on steam railroads. From the data obtained during this investigation it is apparent that the great majority of railroad employee accident cases never get into the Courts. In 1932, about 78 per cent of the accident cases closed out with payment were settled out of Court but nearly half of the accident cases were closed without any money payment. The following extract is from the American Labour Legislation Review:—

The relatively large awards in the few instances where the case is carried through to a Federal judgment have had a distorting effect upon public opinion in many quarters regarding the adequacy of the present system

of indemnifying injured railroad employees. Of the 711 death cases closed out with payment in 1932, 542 were settled without recourse to court action at an average cost of \$4,157, while the average cost of the 46 cases in which a judgment award was made under Federal law amounted to \$13,159.

Similar variations occurred in the average payments for accidents resulting in major and minor disabilities. Only 89 out of 1,329 major disability cases reported, or less than 7 per cent, were settled by judgment award under Federal law, at an average cost of \$7,419, while nearly 70 per cent of the major disability cases were settled out of court at an average cost of \$4,916. Less than one per cent of the cases resulting in minor disability were settled through Federal judgments. The average payment for these accidents was \$488, while the average payment in the vastly greater number of cases settled out of court (excluding state cases) was \$165.

These variations in average awards are even greater when the data are broken down by geographical districts. For all districts and for all types of accidents only a relatively small proportion of the cases reached the courts. At the same time these cases invariably produced the largest awards. Because of this fact they are frequently cited as indicating the payments which may be expected under the present system, when, as a matter of fact, these are the exceptions rather than the rule.

Since the cases settled out of court are numerically of far greater importance, both in the number of cases and the total amounts paid, they more properly reflect the operation of a system which in the main relies ultimately upon court action. Even in those cases where large court awards are made, legal fees tend to absorb a heavy proportion of the total amount of the award. In none of the data presented have legal expenses been deducted, so that the amounts paid are gross, rather than net, and necessarily exaggerate the benefits received as a result of court awards....

The great discrepancies in the average awards made for the same type of accident which are clearly revealed by these accident cost data constitute the greatest indictment of the present liability system of providing for railroad employee accidents. Most of these accident cases are settled out of court, and, in many instances, the amounts received are far from adequate as measured by the awards made under the better workmen's compensation laws. Railroad employees themselves have often been deluded by large judgments made in a few court cases, and do not realize that the great majority of employees who are injured in railroad accidents are far less fortunate.

The American Association for Labour Legislation and the International Association of Industrial Accident Boards and Commissions are both advocating the passage by Congress of a Federal Workmen's Compensation Law for all employees excluded from state laws by reason of their being under federal jurisdiction. The Interstate Compensation Bill drafted by the American Association for Labour Legislation and introduced in Congress after some revision by Senator Wagner in 1932, has been re-introduced with some amendments each year.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Preparatory Technical Maritime Meeting on Hours, Manning, and Holidays with Pay

THE question of hours of work on board ship in conjunction with manning, and of holidays with pay for seamen, were considered by a preparatory technical tripartite meeting held in Geneva from November 25 to December 6, 1935.

In April last it was decided by the Governing Body of the International Labour Office to call a special Maritime Session of the International Labour Conference in the autumn of 1936.

In preparation for the meeting, the International Labour Office distributed two reports, embodying information on the present law and practice in the different countries with regard to the two questions to be discussed followed by a comparative review of this information, and concluding with suggestions as to the lines along which international regulations might be drafted.

The meeting was formally opened by Dr. W. A. Riddell, resident Canadian Advisory officer to the League of Nations, Geneva, in his capacity as Chairman of the Governing Body of the International Labour Office. He welcomed the fact that, after an interval of six years, it had been found possible to bring together again an international assembly of representatives of Governments, shipowners and seamen, for the consideration of questions relating to conditions of employment in the mercantile marine. He hoped that the meeting would pave the way for international agreements beneficial to the shipowners and seamen alike. He mentioned that seven Conventions on matters affecting seamen had been adopted at sessions of the International Labour Conference prior to 1929 to deal with: the minimum age for admission of children to employment at sea; unemployment indemnity in case of loss or foundering of the ship; facilities for finding employment for seamen; minimum age for employment as trimmers or stokers; compulsory medical examination for young persons employed at sea; seamen's articles of agreement; and repatriation of seamen.

#### Hours and Manning Committee

The question of hours and manning was referred to a committee composed of all of the delegates in attendance, which held thirteen sessions from November 26 to December 5. On the last named date the Committee unanimously adopted a report which was in turn approved unanimously by

the conference. This report stated that in the course of the preliminary discussion on procedure there appeared to be general agreement that the work of the Committee should constitute a first discussion of the problem of hours and manning, and it was consequently assumed that the discussion to be held at the special Maritime Session of the International Labour Conference in 1936 should be a second and final discussion.

*Attitude of Seamen.*—The Seamen's Group urged the need for international regulation of hours and manning on grounds of justice, humanity, safety and international competition. The regulation of hours of work in shore industries had made great strides during the last sixteen years, nationally and internationally. The 48-hour week was laid down by the Washington Convention in 1919, and was now widespread in industry, including land transport, and this was now already giving place to the 40-hour week. In these developments it was claimed seamen had been entirely neglected.

If it were argued that the question of wages was bound up with the problem of hours and manning, the seamen's reply was that certain countries in which high standards of wages prevailed had nevertheless already gone ahead on their own in establishing equally high standards of hours and manning. In order to avoid international competition at the expense of the seamen, it was desirable that similar standards should be set up in other countries, and this could only be done by International regulation.

*Attitude of Shipowners.*—On the shipowners' side the British representative said that British shipowners were opposed to any international regulation of hours and manning independently of wages. The fundamental object of the International Labour Organization was to diminish international competition by way of unfair conditions of labour. Any shortening of hours of work or any increase in manning might be offset nationally by reductions in wages; further, any increase in manning or overtime would simply increase the existing disparity in working costs between different countries—in other words, increase rather than decrease international competition, and so defeat the primary object of the Organization. As however, it was impracticable at present to regulate wages internationally, the only statesmanlike course was to leave hours and manning to be regu-

lated nationally, by whatever method each country might consider best suited to its own conditions, viz., legislation, or, as the British shipowners preferred, by collective agreement. This did not mean, however, that the British shipowners were against international labour Conventions on any subject.

Other shipowners referred to the advisability of adopting the methods of collective agreements and pointed to the economic and financial difficulties in which the shipping industry had been carrying on during the last few years and which would make it difficult to introduce such reforms as the Seamen's Group demanded.

*Attitude of Governments.*—Among the majority of the members of the Government group there appeared to be a feeling that it was time and that present circumstances were more suitable than in the past for arriving at some international agreement.

*Points to be Considered.*—The report next summarized the discussions on the detailed "points" with regard to manning, number of watches and hours of work. These points are as follows:—

(1) Number of officers and men to be carried on deck; (2) Number of officers and men to be carried in the engine-room and stokehold; (3) Number of catering staff; (4) Number of wireless operators; (5) The qualification required for deck and engine-room subordinate staff; (6) Limitation of number of boys, apprentices, etc.; (7) The employment of members of the above staffs in a dual capacity; (8) Number of watches for officers and wireless operators; (9) Number of watches for deck hands; (10) Number of watches for engine-room and stokehold; (11) Number of working hours per day and/or week for deck officers, wireless operators and deck hands: (a) at sea, (b) in port, (c) on arrival and sailing days; (12) Number of working hours per day and/or week for officers and other ratings in the engine-room and stokehold: (a) at sea, (b) in port, (c) on arrival and sailing days; (13) Number of working hours per day and/or week for catering and clerical staff: (a) at sea, (b) in port, (c) on arrival and sailing days; (14) Definition of hours of work; (15) General conditions of work on board ship, such as working coal at sea, etc.; (16) The employment of a doctor in ships over a certain tonnage and duration of voyage; (17) Weekly rest or compensation therefor; (18) Prohibition of the employment of young persons at night; (19) Concurrent provisions regarding wages, accommodation, food scales and other conditions of employment; (20) Measures to be taken to secure observance of regulations concerning hours of work or

manning scales; (21) Joint Committees, national and/or international to deal with any matters arising out of any international regulations on the foregoing; (22) General and special exceptions.

### Holidays with Pay

A committee was appointed to report on the question of holidays with pay. This committee considered a list of points which had been set out in a report issued prior to the meeting by the International Labour Office. As regards the first of these points, "Desirability of international regulation of holidays with pay for seamen," the Shipowners' Group maintained that the idea of holidays with pay was inconsistent with the fundamental condition of the seamen's contract of employment, which was for a voyage or for a fixed term. They also considered that it would be illogical for the question to be dealt with internationally so long as wages remained unregulated internationally.

On the seamen's side it was maintained that the fact that holidays with pay were in force in some 75 per cent of the European countries, for example, either for officers and seamen or for officers only, showed that the idea of international regulation of the problem was neither illogical nor impracticable. Moreover, the fact of the existence of high wages in certain countries had not prevented these countries from also having good conditions for holidays with pay.

The Danish, Japanese and Netherlands Government Delegates expressed themselves in favour of international regulations. They suggested, however, that certain exemptions or exceptions should be allowed for.

In conclusion, the report assumed that the discussion to be held at the special Maritime Session of the International Labour Conference in 1936 would be the second and final discussion.

The Committee also assumed that the results of its discussions and any observations made on those results by Governments would be used by the International Labour Office to prepare for the 1936 Conference a final report which may contain a draft for a Convention or a Recommendation.

The report of the Committee on Holidays with Pay was adopted unanimously by the delegates in attendance at the Preparatory Maritime Meeting.

### Publications of the Office

The International Labour Office has just published, under the title "Problems of Vocational Guidance," a study constituting a general review of methods and problems of vocational guidance in different countries, and

intended as a preliminary to a report on vocational training to be published later.

The volume, which does not purport to contain a complete record of the progress made by vocational guidance in the different countries, but merely a bird's-eye view, begins with a definition and history of vocational guidance, and proceeds to give an account of the regulation of vocational guidance in France, Germany, Great Britain and Spain. The third chapter deals with its organization, the fourth with the training of vocational guidance advisers in five countries, the fifth with vocational guidance and schools. The medical aspect is treated in the sixth chapter, while the seventh compares different methods. Other chapters deal with special branches of guidance and placing, occupation analysis and conclusions. A number of appendices are added containing specimen record cards, schemes for guidance and training, resolutions of various organizations, etc.

Under the title "The International Labour Organization and Social Insurance," the International Labour Office has just published a general study giving an account of the work they have done with respect to social insur-

ance problems and the results obtained during the past fifteen years.

The work is in three parts: Part I surveys the historical evolution of national social insurance laws throughout the world, in order to illustrate the national developments on which the action of the International Labour Organization has been based; Part II describes the work of the International Labour Office in the field of social insurance and the methods it has adopted in carrying out its task, which consists primarily in the collection and distribution of information; and Part III gives an account of the conditions in which international regulations on social insurance have been drafted and the reasons leading the Conference to adopt the particular solutions embodied in the Draft Conventions and Recommendations concerning workmen's compensation for industrial accidents, sickness insurance, and invalidity, old-age and widows' and orphans' insurance.

This study is intended particularly for social insurance experts belonging to national administrative departments or institutions, parliaments, workers' and employers' organizations, universities, etc.

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1935

THE generally upward movement that has characterized employment since the first quarter of 1933 continued during 1935. The recovery was not so pronounced as that indicated in 1934 over 1933, in which was recorded the low point of the depression as affecting industrial activity; however, the gains previously made were consolidated and extended, with the result that employment at its 1935 peak at November 1 was in greater volume than in any other month since the end of 1930. It is worthy of note that public employment of one sort or another was a factor of lessened importance in the general situation during 1935 than it had been in 1934, when a substantially larger number of persons were provided with work of that nature. The improvement indicated by employers during the year under review may therefore be regarded as affording sound evidence of a revival in business resulting from increased public demand for commodities and services rather than from government stimulation to industry.

From January 1, 1935, until November 1, there was only one general decline in employment; this occurred at the first of April, and like the losses indicated at the opening and the close of the year, was seasonal in character. In 1922, the period of uninterrupted expansion was of the same duration, while in no other year for which statistics are available has the

trend been so consistently favourable. The improvement, on the whole, continues to be quite widely distributed, both geographically and industrially, but the outstanding feature of the year was the recovery in manufacturing, which was both extensive and prolonged; the chief exception to the generally upward movement was construction, employment in the highway division showing a marked decline.

The Dominion Bureau of Statistics tabulated monthly returns from an average of 9,248 employers whose staffs averaged 933,085<sup>1</sup>, varying between 874,556 at April 1 and 1,012,103 at

<sup>1</sup> The number of wage-earners reported in the Census taken in June, 1931, was 2,570,097, of whom 2,100,139 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate payroll of 940,875 persons, or 44.8 p.c. of the census total, which included the professional classes (notably teachers and public administration employees), agricultural workers, domestic servants and other important classes of workers not included in the monthly surveys of employment. When the census figures are adjusted, so far as is possible, to include only the classes of workers represented in the monthly employment surveys, the proportion of the latter to the former rises considerably. Since 1931, the number of co-operating firms has grown, with a consequent increase in the proportion of the total working population represented in these statistics. A memorandum comparing the industrial distribution of the workers included in the monthly employment surveys with the industrial distribution of all workers in the Dominion, as ascertained in the 1931 census, will shortly be issued. Copies may be obtained on application to the Dominion Bureau of Statistics.

AVERAGE NUMBER OF REPORTING FIRMS, OF THEIR EMPLOYEES AND THE AVERAGE INDEXES FOR THE TWELVE MONTHS, JAN. 1-DEC. 1, 1935, TOGETHER WITH THE CHANGES SHOWN IN THESE FIGURES AS COMPARED WITH THOSE OF 1934

<sup>1</sup> See footnote on page 43.

<sup>2</sup> An increase in the number of reporting firms accounts for the apparent increase in employment, accompanied by a decline in the index number.

the beginning of November. The index (based on the 1926 average as 100), then stood at 107.7, which was the highest in five years; the 1934 peak was 101.0 at July 1, while the maximum so far reached in this record of fifteen years was 127.8 at the first of August, 1929. The lowest point recorded was at April 1, 1933, when the index was only 76. The annual average indexes in the fifteen years of the record are as follows:—

1921.... 88.8	1926.... 99.6 <sup>1</sup>	1931....102.5
1922.... 89.0	1927....104.6	1932.... 87.5
1923.... 95.8	1928....111.6	1933.... 83.4

The recovery indicated in 1935 as compared with the preceding year is summarized in the following table, which shows the average number of reporting firms and of their employees and the mean index numbers for the twelve months, January 1-December 1, 1935. The changes since 1934 in these three sets of figures are also given, those for the indexes being shown in points and also in percentages. With

<sup>1</sup> As the average for the calendar year, 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average for the 12 months, Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

rare exceptions, the 1935 figures are higher than those for the preceding year, but where the reverse is the case, the decline is indicated by a minus sign. The table calls only for brief explanation since the employment situation in the various localities and industries is discussed in considerable detail in subsequent pages.

The table shows a gain of 6.4 per cent in the number of reporting employers,<sup>1</sup> accompanied by an increase of 4.4 per cent in their staffs, and of 3.5 per cent in the average index for 1935 as compared with 1934. Of the last two comparisons, undoubtedly that between the index numbers affords the more reliable guide to changes in the employment situation, since allowance is made therein for the inclusion of new industries, as well as for the cessation of defunct businesses.

While improvement was recorded in all five economic areas in 1935 as compared with the preceding year, it is evident that Quebec and the Western Provinces contributed unduly large proportions of the increase, while the gains in the Maritime Provinces and Ontario were disproportionately small. Thus, firms in Quebec employed over 31 per cent of those added to payrolls, but only 28 per cent of the total numbers employed in the co-operating establishments, while in the Prairies these proportions were 18.3 per cent and 12.9 per cent respectively, and in British Columbia, 17.0 per cent and 8.7 per cent, respectively. On the other hand, the Maritime Provinces, with 7.9 per cent of the average employees, and Ontario, with 42.4 per cent, reported only 6.3 per cent and 27.3 per cent, respectively, of the total number re-employed during the year. The explanation of these discrepancies, of course, lies in the different degrees of activity manifested by the industries predominating in the various economic areas.

The general recovery in the cities, which in 1934 had lagged behind that for the country as a whole, was more pronounced in 1935, chiefly as a result of the large representation therein of manufactures and trade, which have greatly contributed to the general advance during the year under review. Employing some 42 per cent of the aggregate workers covered in the monthly surveys of employ-

ment, the co-operating firms in the eight industrial centres for which separate tabulations are made, reported nearly 60 per cent of the total number added to the payrolls. These gains were, of course, not uniformly distributed among the various cities, the increase over 1934 ranging from 1.9 per cent in Quebec City to 23.5 per cent in Windsor. Toronto recorded the largest gain in actual numbers involved, amounting to over 24 per cent of the general increase in these municipalities, but this was not in proportion to the number employed therein, viz., 30.5 per cent of the aggregate workers. Montreal firms reported 23.3 per cent of the total increase, but 33.6 per cent of all the employees reported in the eight centres. On the other hand, Windsor, with four per cent of the aggregate staff, contributed 13.2 per cent of the increase, and Vancouver with less than eight per cent of the total employed in the larger cities, reported 13.5 per cent of the total number added to the payrolls therein.

Especially pronounced gains were made in manufacturing, which, with approximately 52 per cent of the average employees of all firms, reported a much larger proportion of the total increase during 1935; this presented a striking contrast to the 1934 situation, when factories employed about half of the total number covered in the monthly surveys, but contributed only 39.2 per cent of the general increase over 1933. Mining and trade also showed disproportionately large increases in 1935 as compared with 1934, while in logging, communications, transportation and services the rate of improvement was lower than in the three industrial divisions first-named. Building and railway construction reported greater activity than in the preceding year, the increase in the former being marked; however, the gains were not sufficiently large to offset the losses in highway construction and maintenance, so that employment in the construction group as a whole declined by 10.5 per cent, as compared with 1934. This was partly due to the reabsorption of former highway workers into other industries as the general situation improved, while changes in the unemployment relief policies of the various governments also

<sup>1</sup> A continued growth in the number of firms co-operating with the Dominion Bureau of Statistics must be noted in connection with the increases in the workers represented in the monthly surveys of employment. The gain in the former, however, does not wholly result from the establishment of new industries, nor from more regular co-operation on the part of those previously on the mailing list, but is also due to the fact that a steadily increasing number of firms are furnishing statistics in detail for locality and industry. Thus, the different branches of a business organization in various centres appear in the tabulation as separate firms in the

centres where establishments are maintained. Similarly, employers appear under each of the industries for which separate reports are furnished. The number of firms as used here might more precisely be described as the number of reports tabulated, but the former expression is generally adhered to in accordance with statistical usage in other series and other countries, and also as presenting a better visualization of the nature of the enquiries. On the whole, the establishments now being added to the mailing list have payrolls that are smaller than the average, being in many cases the less well-known businesses.

influenced considerably the situation<sup>1</sup> in this line of work.

### Fluctuation of Employment in 1935

The index of employment (based on the 1926 average as 100), stood at 94.4 on Jan. 1; the movement in the two following months was upward, the gain on Mar. 1 being substantially above the average indicated at that date in the years since 1921. At the first of April, there was a seasonal decline of more than normal proportions, due to unusually large reductions in logging, together with pronounced contractions in highway and railway construction. Employment was then at its 1935 minimum. The upward trend was resumed at the beginning of May, and continued uninterruptedly until November 1; this was a longer period of unbroken expansion than in most years of the record. The index of 93.4 at April 1 had risen to 107.7 at the first of November, or by more than fourteen points, as compared with the average seasonal increase of rather better than nine points between April 1 and November 1 in the experience of other years since 1920. Employment then moved seasonally downward at December 1, the losses considerably exceeding the average decline in the years, 1921-1934. However, the index at that date (viz., 104.6) was 10.8 per cent higher than at January 1, 1935, and was 5.8 per cent higher than at December 1 in the preceding year. The fluctuations had been more pronounced during 1934, when of the increases noted during seven months, only three had been consecutive; from the opening of the year to December 1, the index advanced by 11.6 per cent, thus showing a slightly greater proportionate increase than in the year under review. The average gain from January 1 to December 1 in the last fourteen years has been between seven and eight per cent, so that the improvement in both 1934 and 1935 was more than normal. At July 1, 1935, activity was less than at the same date in the preceding year, the index standing at 99.5, or 1.5 points lower than at the beginning of July in 1934, while in all other months of 1935 employment was at a higher level.

The general index of employment in recent years has been influenced to some extent by public works undertaken for the relief of

unemployment.<sup>1</sup> This factor (which was of less weight in 1935 than in 1934) only indirectly affects the situation in many other large industries, which reported marked improvement in the year under review—notably manufacturing, mining, trade, etc. Factory employment is especially important in this connection, since more than half of the total workers included in these surveys earn their livelihood in manufacturing establishments. This division showed uninterrupted recovery during ten months of 1935—from January 1 to November 1. This was the longest period of unbroken expansion reported since the record was commenced in 1921, being longer by one month than that indicated in 1934. During these months of advancing activity the reporting employers added some 81,000 persons to their staffs, a number that compared favourably with the increases of about 72,000 and 61,000 indicated by the co-operating manufacturers during 1934 and 1933, respectively. The index, rising from 87.4 at the opening of 1935 to 103.5 on November 1, showed a gain of 16.1 points or 18.4 per cent in these months. Curtailment of a seasonal character affected the situation in the last month of the year; although this exceeded the average decline indicated in the fourteen preceding years for which statistics are available, the index of factory employment, at 101.4 on December 1, was sixteen per cent above the January 1 index. The importance of this percentage gain is emphasized when it is compared with the average increase in the index from January 1 to December 1 in the years 1921-1934, which amounts only to eight per cent.

In connection with the statistics on employment herein reviewed, it may again be mentioned that the tendency during the years of depression has been to retain as many as possible on the staff by reducing the daily or weekly hours worked. Thus, had statistics of the earnings of the persons included in the monthly reports on employment been available, they would in the period of declining industrial activity doubtless have shown in many cases a greater shrinkage than the number on the payrolls, while similarly, an improvement in the business outlook is reflected in many cases by an extension of the working hours rather than by an immediate increase in the

<sup>1</sup> During the 11 months, January to November, 1935, the average number of men, per month, afforded employment on a wage basis in connection with relief projects, as reported to the Dominion Unemployment Relief Commissioner by the Provinces and Dominion Departments, was 25,970, the total number of man-days worked during the 11 months being 3,980,735. A monthly average of 22,633 men were also afforded relief in provincially and federally operated camps where the unemployed were cared for and given useful

work in return for subsistence and a small cash allowance, the total number of man-days relief afforded on this basis having been 6,006,865. These figures are subject to revision when final reports are received. During the year 1934, the monthly average of those employed on a wage basis on relief works was 48,144; the man-days worked during the year amounted to 8,970,721, while on a subsistence basis the average number of men afforded relief was 35,377 and the total number of man-days relief afforded was 9,557,862.

personnel. This is illustrated in the recent statistics of earnings in the United States which are collected from the firms furnishing monthly data on employment. Thus, at November 1, 1935, the preliminary index of employment in manufacturing stood at 84.8 per cent of the basic average for the three years, 1923-1925, or 7.9 points higher than in November, 1934, while the index of earnings was 74.5, an increase of fifteen points over the same period in the preceding year.

Another point may be noted regarding the Canadian index numbers of employment. Where employers are obliged to curtail their production, it sometimes happens that the date to which the monthly survey relates marks the low point in activity for the month, employment in some cases being in greater volume on almost any other working day of the month. This factor is of greater importance when the numbers at work fluctuates about a low level than when staffs are more normal.

An analysis of the data furnished by employers shows that practically all industries except highway construction shared in the improvement noted during 1935 as compared with 1934 while in most cases the situation was also more satisfactory than in 1933 and 1932. It has already been stated that manufacturing experienced the longest period of expansion on record in the years since 1920; to this recovery, most of the various branches of factory employment have contributed to a greater or lesser degree. Logging, on the whole, was unusually active, the average index, at 126.9 being slightly higher than the 1934 mean of 124.7; most of the advance occurred in the early months of the year, employment from September onward having been at a slightly lower level than in the autumn and early winter of 1934. The 1935 average was also slightly higher than the previous maximum of 125.8 reported in 1929. Mining, particularly of metallic ores advanced during many months, with the result that employment in that group as a whole was brisker than in any other year of the record. Building construction gained considerably during the busy season, and was generally higher than in 1934, 1933 and 1932, though continuing at a low level as compared with years of normal activity. Employment in railway construction was at much the same level as in the preceding year, but highway construction afforded employment to a smaller number of men, partly as a result of changes in the unemployment relief policies of the various governments. Services and trade were more active, stimulated to some extent by a better tourist season, as well as by the general improvement in business. In connection with these two in-

industries, it may again be pointed out that in such lines of business, establishments as a rule cannot be wholly closed down for longer or shorter periods, as in manufacturing plants, with the result that the situation is frequently met by cutting down the normal working day or week for the individual employee, in order to retain as many as possible on the payroll. This tends to keep up the employment index, since the methods used in rotating the staff are usually not reflected in the monthly employment data.

### Employment by Economic Areas

The revival in industrial activity evident during 1934 again extended with a varying intensity to all five economic areas during the year under review. The situation at the end of 1935 was substantially better in each of these districts than it was at the opening of the year, and also than it had been at the end of 1934, 1933 or 1932, being also in Quebec, Ontario, and British Columbia more favourable than at the close of 1931. The greatest proportional gain between the 1935 low and high points occurred in the Prairie Provinces, where the maximum of activity was at November 1; the index then stood at 108.1, being 21.2 points higher than the minimum of 86.9 recorded on April 1. Employment in all five economic areas was greater, on the average, than in the twelve months of 1934, when general activity has been at a more satisfactory level than in the preceding year. In the Maritime Provinces, there was a gain of 2.7 per cent in the 1935 mean over that for 1934, in Quebec of four per cent, in Ontario of two per cent, in the Prairies, of 5.8 per cent, and in British Columbia, of 8.1 per cent.

*Maritime Provinces.*—Employment in the Maritime Provinces showed more fluctuation during 1935 than had been the case in 1934; large declines at the first of the year were followed by a moderate gain on February 1. The trend was then unfavourable in the next two months, after which the situation improved steadily until October 1, when the index, at 112.9 was higher than in any other month since November 1, 1931. Curtailment took place at the beginning of November and December, 1935; that in the former month was contra-seasonal, while in the latter the reductions exceeded the average seasonal losses in the experience of the last fourteen years. In spite of these greater than average contractions, the December 1 index, at 107.5, was 8.5 points higher than at the opening of the year, being also slightly above the December 1, 1934, level. The aggregate payrolls of the 649 reporting employers in the Maritime Provinces averaged 73,912 persons, as compared

with the mean of 71,401 employed by the 613 firms co-operating in the preceding year.

The index in manufacturing as a whole was consistently higher throughout the year than in 1934, the mean being 95.9, as compared with 91.8 in 1934 and 77.2 in 1933. The December 1, 1935, index, at 99.4, was 13.3 p.c. higher than at the opening of the year, and 3.6 p.c. higher than in the same month in the preceding year. The greatest improvement was in the iron and steel, lumber and food industries, while the indexes in textiles and pulp and paper were rather lower, on the average, than in 1934. Employment in most branches of manufacturing continued substantially below the 1926 basic average. Unsatisfactory export conditions continued to affect transportation, as in the last few years, and this industry afforded, on the whole, a smaller volume of employment in 1935 than in 1934. Communications generally showed slight improvement over 1934. Construction on the whole was rather more active, reductions in personnel in this comparison in the first five months of 1935 being offset by monthly increases from the beginning of June. Services consistently afforded greater employment, and trade also registered a generally higher level of activity. Mining, except at February 1 and March 1, showed a betterment over 1934. Logging was not so brisk as in the preceding year, but was more active than in 1933 and 1932, the index of employment averaging 160.0, as compared with 203.0 in 1934, 88.6 in 1933 and 62.3 in 1932.

*Quebec.*—With only two exceptions, the general trend of employment from January 1 to November 1 was uniformly favourable in Quebec, the gains on the whole being on a much larger scale than those noted in the preceding year. Declines were indicated at February 1 and April 1, while the only interruption in the steady improvement noted in 1934 had occurred at the latter date. The index rose from its 1935 low of 85.9 on April 1 to its maximum of 105.0 on November 1, or by over 22 per cent. Employment in the year just closed fluctuated between wider limits than in 1934, the index advancing by over 19 points between the trough and the peak, as compared with a variation of some 13 points in the preceding year. Activity in each month of 1935 was greater than in the corresponding month of 1934. The labour forces of the 2,202 co-operating employers varied between 235,855 and 289,363 workers on the dates of minimum and maximum activity, respectively, averaging 262,271 for the twelve months, while the mean index was 95.4; the 1934 average of the 2,080 reporting firms was 249,996, and the

index averaged 91.7, while in the preceding year it was 82.0.

Employment in manufacturing as a whole was brisker during the entire year than in 1934, improvement in this comparison being indicated each month, while the 1935 index averaged 97.2, or 5.5 per cent higher than in the preceding year. Practically all classes of manufacturing recorded a larger volume of employment; the improvement in the major groups—lumber, pulp and paper, textiles and iron and steel—was especially important, in view of the large number of workers engaged in such industries.

The index of employment in communications was fractionally lower in the twelve months. There was also a slackening in transportation, construction and trade during a number of months in the year just completed; the averages in the first two of those industries, however, were higher than in 1934, while that in trade was practically the same. In the logging group, activity was substantially greater in the first quarter of 1935 and was also higher at the beginning of May and June, but in the remaining months was at a lower level than in 1934. The mean index stood at 192.2, as against 202.5 in 1934; in 1933, it was 109.3 and in 1932, 60.3. Mining was decidedly more active in 1935 than for several years past, largely due to gains in the metallic ore branch; the mining index averaged 144.5 as against 123.0 in the year before. Services, though in a more favourable position than in 1934, showed only moderate activity during the year under review. It may be repeated that many persons on the payrolls of the reporting trade and services establishments, as in manufacturing and various other groups, were probably not employed full time.

*Ontario.*—An average staff of 395,213 employees was registered by the 4,080 firms furnishing data in Ontario; the mean index was 103.3 in 1935, or two points higher than in the preceding year, when the payrolls of the 3,830 co-operating establishments had averaged 384,456. Employment, on the whole, showed less fluctuation during 1935 than in the preceding year, there being a range of only twelve points between the maximum and minimum indexes, as compared with that of nearly 19 points in 1934. The situation in all but three months was better than in the corresponding period of 1934, the December 1 index, at 107.0, being 5.2 per cent higher than at the same date of the preceding year.

Manufacturers, on the whole, reported decidedly greater activity throughout 1935, although employment generally was still in rather less volume than in the basic year,

1926. During the year under review, the index was slightly higher than the manufacturing index for the second great manufacturing province—Quebec, while in 1934 and 1933 the opposite was the case. This was mainly due to a revival of activity in the iron and steel industries, which are especially important in the industrial composition of Ontario; a comparison of the data shows that the heavy industries in the province experienced relatively greater recovery during 1935 than was the case in Quebec. On the other hand, the indexes in lumber and textiles were substantially higher in the latter than in Ontario. Employment in pulp and paper, lumber, textile, metal and other factories was brisker throughout the year than in 1934, in each case also showing decided improvement between the opening and the close of the year under review. Iron and steel advanced steadily from January 1 to May 1, 1935, succeeded by contractions in the next four months; the trend was again distinctly upward at October 1 and November 1. While the customary seasonal losses reduced employment in this group at the beginning of December, the index was then 26.3 per cent higher than at the opening of the year, being also higher than in any month in 1932, 1933 or 1934. The index averaged 88.1, as compared with 72.1 in 1934, 58.3 in 1933 and 64.3 in 1932. In the textile group, activity gained month by month from January 1 until April 1, and expansion was also indicated in September, October and November; at the first of November, the index was 14.5 per cent higher than at January 1, and in spite of the seasonal curtailment indicated at the beginning of December, it was then still 12.4 points above the January 1 index. The 1935 mean of 108.0 was nearly four points above that of the previous year.

Operations in logging camps throughout 1935 were at a relatively high level in comparison with the last few years, the index averaging 107.4, as compared with 95.9 in 1934 and with 47.9 in 1933. Mining was particularly active, employment in the autumn and early winter reaching the highest level in the record; on December 1 the index was 197.0, while in the twelve months it averaged 185.8, as compared with 154.5 in 1934 and 127.2 in 1933. The extraction of metallic ores, which accounts for most of the persons engaged in mining in Ontario, continued at an unusually high level during the year just passed, international monetary conditions again providing an important stimulus to production. The number employed in communications was practically the same as in 1934. Transportation, in seven months of

1935, was brisker than in the corresponding months of the preceding year, and the mean index was 75.9, or fractionally higher than that of 75.2 in 1934. Services also reported greater activity than in the year before, to some extent reflecting improvement in the tourist trade. Construction generally afforded less employment, partly a result of the changes in the unemployment relief policies; private and commercial building, however, was in greater volume than in the preceding year. The index for construction as a whole averaged 118.9 in the twelve months of 1935, compared with 158.8 in 1934, 86.2 in 1933 and 101.1 in 1932. The volume of employment in trade was greater throughout 1935 than in the preceding year, the index averaging 130.7, or 5.4 points higher than in 1934.

*Prairie Provinces.*—Employment in the Prairie Provinces showed rather more variation than in the preceding year, the index ranging from 86.9 on April 1 to 108.1 at the beginning of November, as compared with a spread of only 13 points between the 1934 high and low. The general situation at the beginning of each month was better than on the same date of the year before, and employment at November 1 attained its highest point since the same date in 1931. The average for the twelve months under review was 95.2, or 5.2 points more than in the preceding year, while it was nine points higher than in 1933. The 1,349 employers furnishing data in Manitoba, Saskatchewan and Alberta had an average staff of 120,089 persons during the year, while in 1934, the 1,285 co-operating firms reported an average payroll of 112,868 workers.

As has been pointed out in previous annual reviews of employment, the unsatisfactory conditions prevailing in agriculture since the autumn of 1929 have caused much unemployment among farm workers generally, who are ordinarily not represented in these statistics, but for many of whom work or relief has had to be found in recent years. The dependence of the population of the Prairies upon agriculture has intensified the situation in that area during the last few years of depression in the agricultural industries. Large programs of highway construction and maintenance work have been undertaken to relieve the distress resulting from the unfavourable agricultural and industrial conditions; labour camps instituted for this purpose have also accommodated many men released from farming and other industries. However, the number employed on projects of this character was smaller in 1935 than in 1934.<sup>1</sup>

<sup>1</sup> See footnote on page 45.

Activity in manufacturing, logging, mining, transportation, construction and maintenance, services and trade in the Prairie Provinces was generally greater during 1935 than in the preceding year. Within the manufacturing group, there were advances in the textile, pulp and paper, lumber, iron and steel and some other industries. Logging, though not so active in the last three months of the year as in the final quarter of 1934, afforded considerably more employment on the average.

*British Columbia.*—The 969 firms reporting in British Columbia employed an average working force of 81,600 employees, while in the preceding year a mean of 74,870 was reported by 882 employers; the 1935 index averaged 97·7 as compared with 90·4 in 1934, 78·0 in 1933, 80·5 in 1932, 95·5 in 1931, and 107·9 in 1930.

All groups of manufacturing indicated heightened activity during the year under review. The lumber, pulp and paper, textile, iron and steel and other factories reported a decidedly better situation at the end of 1935 than at the beginning, while the indexes also averaged higher than in the preceding year. Logging showed improvement, although employment in this and the other branches of lumber industries continued to suffer from the decline in world demand, the indexes still being at a low level in comparison with most years of the record. Mining, transportation, communications, construction and maintenance, services and trade were brisker during the greater part of 1935, the mean index in each of these being higher than in 1934 and also in 1933.

### Employment by Cities

Improvement in industrial employment was reported in each of the eight centres for which statistics are segregated, viz., Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver; the gains were relatively greater during 1935 in Windsor, Vancouver and Hamilton than in the other cities. A significant feature of the situation is that the recovery in these cities, which during 1933 and 1934 was generally at a slower rate than in the Dominion as a whole, was in 1935 rather more pronounced. Thus, in 1934, 46 per cent of the average number of co-operating firms in Canada were located in these municipal areas, and they had 40·8 per cent of the average employees covered in the monthly surveys; of the total additions to staffs during the year, however, they reported only 20 per cent; in 1935, firms in the cities and their employees constituted 46·3 per cent and 41·6 per cent respectively of the total employers and total employees, while almost 60 per cent of the total increase during the year was reported in these eight centres. These index numbers

showed an average advance of 5·6 per cent as compared with the general increase of 3·5 per cent in the Dominion. On the one hand the marked improvement in manufacturing and trade in recent months, and on the other hand the decreasing importance of highway construction in the industrial distribution of the workers covered in these surveys, largely accounts for this situation.

The reports showed that employment was maintained at a generally higher level in Ottawa and Windsor than in the other centres above named, while the lowest indexes were again indicated in Montreal and Winnipeg. The greatest percentages of improvement shown by the 1935 index numbers over those for 1934 were in Windsor, Hamilton and Vancouver.

*Montreal.*—The staffs of the 1,287 Montreal firms making returns averaged 130,605 persons, while the mean index, at 87·3, was 3·3 per cent higher than that for the preceding year. The 1935 fluctuations in employment were different from those of 1934; however, gains were made in eight months which provided work for a larger number of persons than had been added to the reported staffs in the preceding year. The index rose from 81·6 at February 1, 1935, to 91·9 at the beginning of December, when activity was at its highest since the end of 1931. Manufacturing generally was more active in every month of the year under review; the index averaged 89·8, as compared with 85·7 in 1934, and 79·9 in 1933. The vegetable food group showed a higher level during nine months of last year than in the same months of the year preceding, and the average index was higher. The printing, publishing and paper goods, textile, tobacco and beverage, iron and steel and other divisions reported substantial improvement on the whole as compared with 1934. Communications consistently afforded less employment. Transportation was brisker in most months, but the improvement was not especially marked, the index averaging 92·1 per cent of the 1926 average, as compared with 87·9 in 1934. Construction firms reported smaller payrolls during the greater part of 1935, their average employment during the year being lower. In trade also, the index in six months was below that for the same period of 1934, but the annual average was fractionally higher, at 121·4.

*Quebec City.*—The 1935 variation between the minimum and the maximum of employment in Quebec amounted to nearly fourteen points in the index, a range very similar to that of 1934, however the average index, at 96·9, was slightly above that of 95·1 in the preceding year. The staffs of the 165 employers furnishing data averaged 12,719, as compared with the

mean of 12,333 reported by 159 firms in 1934. Activity in manufacturing generally was at much the same level, the mean index standing at 95.6, as against 94.0 in the preceding year. Leather plants, on the whole, were rather busier than in 1934, and other branches of manufacturing showed moderate improvement in this comparison. The mean index in transportation was lower, while that for construction was much higher, averaging 116.7 as against 95.5 in 1934.

*Toronto.*—Employment showed moderate improvement during seven months of 1935; at the close of the year, the index was five points higher than at the beginning, while the annual mean of 97.5 compared favourably with that of 93.5 for 1934. The number of employees of the 1,372 firms co-operating during the year under review averaged 118,543, while in the year before the mean payroll of the 1,281 reporting employers was 112,765. The manufacturing industries showed a better situation each month of 1935 than in 1934, and the average index of 94.4 was over five points higher. Within this group, iron and steel, textile, printing and publishing and other manufacturing industries reported consistently greater employment in the twelve months under review, while in vegetable food factories little general change was indicated.

Transportation during the first half of last year was duller than in 1934, but improvement occurred from June onward, and the index, averaging 89.4, was practically the same as in the preceding year. Communications afforded less employment; there was also a falling-off in construction. Trading establishments, on the other hand, showed heightened activity; the index averaged 123.7 in 1935, as compared with 120.7 in the preceding year. In Toronto, as in the other centres, some establishments continued to retain a considerable proportion of their ordinary staff by reducing the hours worked by their employees.

*Ottawa.*—There were uninterrupted advances in Ottawa from the first of the year to July, after which the tendency, except at October 1, was downward. On the whole, however, employment was brisker than in 1934, the index averaging 102.2 in 1935, compared with 99.5 in the preceding year. Manufacturing reported a larger volume of employment; pulp and paper and other plants showed greater activity, while lumber mills were slacker. Construction and trading establishments also reported larger staffs than in 1934, improvement in the former having been noted during eight months and in the latter, throughout the year. An average payroll of

13,145 workers was employed by the 172 firms whose data were received, as compared with the 1934 average of 12,701 reported by 165 employers.

*Hamilton.*—Employment in Hamilton increased during nine months of the year under review, with the result that the December 1 index of 100.4 was 17.4 points above the level of January 1; it was also higher by 14 points than on December 1, 1934, while the mean for the year under review was 92.6, as compared with 84.1 in the preceding year. The 270 co-operating firms reported an average working force of 29,630 persons; in 1934, 258 establishments had 26,744 workers, on the average. Manufacturing showed gains from month to month from January to November, being also brisker throughout 1935 than in 1934. Iron and steel, electrical appliances and other groups of factory employment were more active, improvement over 1934 being indicated in every month of the year under review; in textiles, however, the index averaged 86.3, or fractionally less than in the preceding year. Construction and trade, on the whole, afforded heightened employment in 1935, the gain in the latter being fairly marked.

*Windsor.*—The index number of employment in Windsor averaged 115.0 and the recorded payrolls of the 165 co-operating firms averaged 15,568 workers in 1935, compared with the mean index of 93.1 and 12,456 employees in 153 establishments reported during the preceding year; in 1929, when employment was at its maximum for this record, the average index was 153.2. Manufacturing showed general improvement as compared with 1934, the index each month being higher than at the same date in the preceding year, and averaging 123.7 or 26.6 points higher than in 1934. The automobile and related industries showed marked activity. Employment in construction, though brisker each month of 1935 than in the same month of the year before, continued in very small volume. Owing to the employment policy followed by some firms in the Border Cities, it frequently happens that activity on the date of these enquiries is at a lower level than on almost any other day in the month; the practice of reducing working hours rather than personnel is also an especially important factor in the situation in these centres.

*Winnipeg.*—Conditions in this city continued to improve moderately, but employment was still dull, the index being lower than in any other leading city, except in Montreal. The geographical position of Winnipeg is such that

the city is particularly affected by the unsatisfactory markets for agricultural products prevailing at home and abroad, as well as by other factors of more general application. Improvement was noted in nine months, while the gains in general were on a larger scale than for several years past; activity on December 1 was higher than at the beginning of 1935 and also than in any other month since October, 1931. The mean index for the year was 87.8, compared with 82.7 in 1934, 80.2 in 1933, 86.6 in 1932, 97.1 in 1931, 107.6 in 1930 and 112.3 in 1929. The manufacturing division as a whole was brisker in every month of the year under review than in 1934; considerable improvement occurred in the iron and steel, food, textile, printing and publishing and other factories. Transportation, construction and trade, generally reported a larger volume of employment. An average staff of 37,529 was employed by the 448 firms whose data were received during the twelve months under review, compared with 35,197 reported by 421 establishments in 1934.

*Vancouver.*—During 1934, employment in Vancouver had advanced during eight months; the 1935 period of expansion extended over only six months, but the index averaged 96.6, or 9.2 points more than in the preceding year. The December 1 index, at 100.3, compared favourably with that of 88.7 recorded on January 1; in 1934, there had been a gain of 6.8 points between January 1 and December 1. Data were furnished by 405 firms with a mean payroll of 30,630 workers in 1935, while in 1934 the averages were 375 establishments and 27,435 employees. The unemployment existing in Vancouver, as in other industrial centres, is doubtless greater than would be indicated in these surveys of employment, owing to the unemployed transients who gravitate there, although they may never have appeared on any of the payrolls reported by Vancouver establishments. While the unemployment relief camps are designed to take care of such workers, it is probable that in some cases they still constitute a problem. The situation in Vancouver is aggravated by the milder winters enjoyed as compared with other parts of Canada.

Manufacturing showed improvement during most months of 1935, when the index averaged 95.5 or 10.7 points higher than in the year before. In every month, the lumber trade showed heightened activity, and other manufactures were also generally brisker. The indexes for communications, transportation, construction, services and trade in each case averaged higher than in 1934. While

there was an advance of over 19 points in construction, the index continued low, averaging only 57.6 during the twelve months.

### Employment by Manufacturing Industries

As already stated, employment in manufacturing generally showed a longer period of unbroken expansion than in any other year for which data are available, having increased each month from January 1 to November 1. In 1934, there were advances from the first of the year to October 1, or during nine months, while no previous year showed more than eight uninterrupted monthly advances. During the ten months of recovery during the year under review, some 81,400 persons were reinstated on the staffs of the co-operating establishments. Seasonal losses that exceeded the average indicated in the preceding fourteen years reduced employment at December 1, but the index, at 101.4, was then fourteen points or sixteen per cent higher than at the first of the year. This increase compared favourably with those of 14.1 and 13.4 per cent between the same months in 1934 and 1933, respectively, while in each of the other years since 1930 activity had declined as the year progressed, there having been reductions of 3.6, 4.1 and 5.9 points between the indexes for January 1 and December 1 of 1932, 1931 and 1930, respectively. The average increase in the index during the twelve months, January 1 to December 1 in the years 1921-1934 is eight per cent; so that the advance of 16.0 per cent in the year under review is especially noteworthy.

The improvement which occurred in 1935 over 1934 was more marked than that noted in 1934 as compared with 1933. The payrolls reported at the beginning of December, 1934, had exceeded those indicated for January 1 by some 72,000 persons, while in the year before some 58,500 workers had been reinstated in the co-operating establishments. Employment in each month of 1935 was more active than in the same month of the preceding year; while the indexes at the beginning of September, October, November and December were higher than in any other month since November 1, 1930.

Statistics were received during 1935 from some 5,480 manufacturers employing, on the average, 487,664 operatives, as compared with the average of 450,582 reported by the 5,218 establishments making returns in 1934. The index averaged 97.1 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 90.2 in the preceding year, 80.9 in 1933, 84.4 in 1932, 95.3 in 1931, 109.0 in 1930 and 117.1 in 1929.

Index numbers are prepared for 45 different divisions and subdivisions of factory employment; in 43 of these, employment on the whole was in greater volume than in 1934, while in only two was it not so brisk. These two were musical instruments and wood distillates and extracts. In most cases activity was also greater than in 1933 and 1932, the most pronounced gains during 1935 occurred in the iron and steel, non-ferrous metal and electrical appliance divisions, but the chemical, lumber, food, leather, clay, glass and stone, pulp and paper, textile and many other groups also showed important improvement, an extension of that recorded in 1934 over 1933. The mean index in iron and steel advanced from 71.5 in 1934 to 82.7 in the year under review, or by 15.7 per cent; this gain is of particular importance as indicative of an upward movement in the production of capital goods, the recovery from the low point of the depression having originated in the production of goods for immediate consumption. The highest level of employment, relatively to the 1926 basic average, was maintained in the edible animal, leather, vegetable food, textile (notably silk, woollen and knitting mills), in tobacco and beverage, chemical, electric light and power, electrical apparatus, automobile, non-ferrous metal, non-metallic mineral and miscellaneous manufactures. On the other hand, the indexes in lumber, musical instrument, agricultural implement and steel ship-building works were decidedly lower than the average for all manufacturing industries. Nevertheless, three of the four industries showed increases over 1934 that considerably exceeded the average, musical instrument plants being the exception; the manufacture of radios and equipment is elsewhere classified, otherwise this industry might also have shown a more favourable situation.

### Logging

Employment in logging during 1934 had reached a volume only exceeded in this record of fourteen years by that reported in 1929. During 1935, activity continued at a high level, despite unsuitable weather conditions towards the close of the year, which resulted in lower employment than at November 1 and December 1, 1934. Nevertheless, the annual index in logging showed a small increase as compared with that for the preceding year, and was also slightly higher than the previous maximum in 1929. Improvement over 1934 was indicated in Ontario and the Western Provinces, but in the Maritimes and Quebec employment was not quite so active. The working force of the 301 logging firms supply-

ing information during 1935 averaged 35,427, and the index number, 126.9. The reported payrolls varied between 21,600 on September 1 and 51,200 at the first of February. In 1934, the mean index was 124.7, while the number employed by the 280 employers co-operating was 34,549; in 1933, the index averaged 66.5 and in 1932, 42.6. Previous issues have mentioned that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement. From many of such contractors it is impossible to obtain data at any rate in time for inclusion in the monthly surveys of employment.

### Mining

There were gains in mining during nine months of 1934, while the trend was upward in only seven months of last year; however, employment throughout 1935 was consistently higher than in 1934, while on the average, it was also in greater volume than in any other year on record. The index at 131 on December 1, 1935, was ten per cent higher than at the opening of the year, and was also 6.7 per cent higher than on December 1, 1934. The index averaged 123.3, compared with 110.8 in 1931 and 97.5 in 1933.

In *coal-mining*, employment was in practically the same volume on the whole, the index averaging 88.4, compared with 87.6 in 1934. The labour force of the 101 co-operating operators averaged 23,915 workers in 1935, as against a mean of 23,710 employed at some 100 mines in the preceding year.

Employment in the extraction of *metallic ores* was generally much higher than in 1934, or any other year for which statistics are available; the mean index, at 218.8, was nearly 22 per cent above the average of the preceding year. The index varied from 200.8 on January 1 to 234.4 on November 1, showing almost uninterrupted improvement throughout the year. The staffs of the 157 reporting firms averaged 26,064 during the year under review, compared with 21,259 in 103 mines during 1934. World monetary conditions continued to exercise a decidedly stimulating effect on activity in the metallic ore division.

*Non-metallic minerals* (other than coal) again showed considerably increased employment, being assisted by the partial recovery in the building trades and by activity on road work; employment in every month of 1935 was better than in the same period of the

preceding year. In spite of this improvement, however, production continued at a relatively low level as compared with many other years of the record. The index averaged 94·8, as compared with 83·5 in 1934, 69·3 in 1933, but with 137·1 in 1929, when activity in this group was unusually pronounced, in consequence of the very large program of construction work then being executed. An average payroll of 6,471 persons was employed during 1935 by the 79 co-operating firms, while those reporting in 1934 had a mean of 5,674. Quarries and other divisions coming under this heading recorded rather heightened activity over the preceding year.

### Transportation

The fluctuations in employment during the year under review differed from those of 1934; although there were gains in six months, or the same number as in the preceding year. The expansion was on a rather smaller scale, but in spite of this the employment index for 1935 averaged 81·2, as compared with 80·3 in 1934 and 79·0 in 1933. The 402 transportation companies whose returns were tabulated employed, on the average, 96,047 workers, as compared with the mean of 94,774 reported by the 384 employers co-operating in the preceding year.

In the *steam railway division*, the index averaged 72·1, as compared with 72·2 in 1934. An average working force of 57,321 employees was recorded in steam railway operation, compared with 57,413 in 1934. It is probable that the working hours of many railroad employees, which had been reduced in the last few years, have been lengthened as a result of the general improvement in business, which has not yet been of sufficient dimensions to require any large increase in personnel. *Street railways and cartage companies*, to the number of 203 with a mean of 24,953 workers, reported a slightly better level of employment, the index averaging 113·0 or about two points higher than in the preceding year. Employment in *shipping and stevedoring* was also rather greater than in 1934; the mean index was 82·3, while the reported staffs averaged 13,773, varying between 10,500 persons on February 1 and 16,459 at the beginning of December. In the year before the mean index was 79·0.

### Communications

The communications division reported practically the same volume of employment as in the preceding year, the index averaging 79·8, compared with 79·1 in 1934. Telegraphs showed moderate improvement, but employment on telephones did not greatly respond to the general recovery in business; this is

partly due to the increasing use of the mechanical method of telephone operation. The personnel of the companies furnishing data during 1935 averaged 21,099 employees, of whom approximately 77 per cent were engaged on telephones. In the preceding year the average was 20,855, some 77 per cent of whom were also engaged in telephonic communications, while in 1933 this proportion had been 80 per cent.

### Construction and Maintenance

Employment in construction showed general advances in eight months of 1935, during which period approximately 55,300 workers were taken on by the co-operating contractors; in the preceding year, increases were recorded in only five months, but the number of persons then added to the payrolls was about 67,500. The increases in construction during 1934 over 1933 had been disproportionately large, constituting nearly one-third of the general gain; this was due, in the main, to the abnormally great activity in highway and street construction and maintenance, arising from the unemployment relief policies of the various governments.<sup>1</sup> In 1935, the persons thus employed were not so numerous, while there were advances of a more general character in building and railway construction; these were not sufficiently large to counteract the declines recorded in work on roads, streets and highways, so that employment in construction as a whole was in smaller volume than in the preceding year. This was the only main industrial group showing reduced activity from 1934. The forces of the 1,044 co-operating employers aggregated 114,683 in the year being reviewed, varying from 93,763 at April 1 to 140,901 at the beginning of November.

*Building construction* gained in eight months in 1935, and was more active in each month than at the same date in the preceding year, when the period of expansion had been longer by one month. The December, 1935 index, at 67·3, was almost 22 per cent higher than that of 55·2 recorded on December 1, 1934. The mean index in the year under review, (55·4 per cent of the 1926 average), compared favourably with that of 47·8 in the preceding year, but was very much lower than in years of normal building activity. The average number of persons employed by the 669 reporting contractors was 22,400. In 1934, 640 contractors had reported an average of 19,218 employees. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually

<sup>1</sup> See footnote on page 45.

employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

*Road construction* as reported to the Dominion Bureau of Statistics afforded less employment in every month of 1935 except November than in the same period of 1934. The payrolls reported in the year under review averaged 64,865, ranging between 52,903 at April 1 and 83,753 at the beginning of November; in 1934 the average was 81,362. The 1935 indexes averaged 175·5, compared with 221·3 in 1934 and 132·2 in 1933. In many districts, road work normally is supplementary to the occupations usually followed by nearby residents, particularly agriculturists during slack periods on their farms, but in the last few years has provided work for men on unemployment relief projects. The number<sup>1</sup> engaged by the Dominion and Provincial governments on the Trans-Canada Highway and other unemployment relief projects and camps, however, was smaller than during 1934, and there were not so many employed on work of this nature by the municipalities and other authorities.

Employment in *railway construction* was generally rather more active than in 1934, improvement in this comparison being indicated in seven of the twelve months, while the working forces averaged 27,417, as compared with 27,090 in the preceding year. The reporting employers averaged 34, the same number as in 1934. The mean index was 68·8, while in 1934, it was 67·9 and in 1933, 61·3.

In 1928, when activity was at its maximum in this record of fifteen years, an average payroll of 46,148 persons was reported, and the mean index stood at 116·7.

### Services

Statements were received monthly from some 451 firms in this division, whose employees averaged 25,478. The situation showed improvement during five months of the year under review, while employment in each month was in greater volume than at the same date of 1934. The index averaged 118·2, compared with 115·1 in the preceding year, and 106·7 in 1933. Employment in hotels and restaurants was rather brisker than in 1934, reflecting the generally improved situation in business, together with the better tourist trade resulting therefrom. In laundering and dry-cleaning establishments, employ-

ment was also in greater volume than in the preceding year, the mean index, at 120·8, being just over six points higher.

### Trade

Trade was generally at a higher level than in 1934; at the first of February, employment showed the usual pronounced contraction (in reaction from the intense activity of the Christmas and holiday season), and it also declined at the beginning of August. Apart from these recessions, the trend was steadily upward throughout 1935. The payrolls of the 1,151 co-operating firms averaged 96,246 persons, and the index 122·1, compared with 117·9 in 1934, 112·1 in 1933 and 116·1 in 1932.

It has been mentioned in previous issues that during the depression, many establishments, in order to keep on most of their usual staff, have reduced the working hours per week or per month, so that the per capita earnings of the persons employed would, if available, have shown a greater falling-off than the personnel. In the same way, it is likely that the working hours of many persons in trading establishments have recently been extended with consequent increase in the earnings of the individual, as well as in the numbers employed.

Of the workers reported in the trade group during 1935, approximately 74 per cent were classified as employed in retail stores, in which activity was relatively greater than in wholesale houses. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in trade at a relatively high level in recent years as compared with certain other groups.

### Tables Showing Employment by Industries

Tables of index numbers, by economic areas, leading cities and industries, by months and with yearly averages, are published in the bulletin entitled "Annual Review of the Employment Situation in Canada during 1935", issued by the Dominion Bureau of Statistics. This bulletin, which contains full particulars regarding employment in the various districts and industries together with numerous charts illustrating the course of employment in recent years, will be forwarded on application to the Dominion Statistician.

Monthly index numbers have been published in each issue of the LABOUR GAZETTE, those for December 1, appearing elsewhere in this issue.

<sup>1</sup> See footnote on page 45.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF DECEMBER, 1935

### Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of December was reported by Superintendents of the Employment Service to be as follows:

Little farm work was being done in the Maritimes other than ordinary farm chores and the breaking of roads after recent heavy storms. Fishing in some localities was also somewhat handicapped by unfavourable weather, although lobster, cod and haddock fishermen reported a very good week. Scallops and clams were also plentiful. Logging was quiet, due to the fact that many of the men returned home for the holiday season. Coal mines in the New Glasgow area operated from 3 to 5 days per week, while those in the Cape Breton and vicinity worked from 1 to 5 days per week. Some idleness was also reported amongst the Cape Breton collieries and likewise in the iron and steel industry. Manufacturing was fair. Little building construction was in evidence, but many men found work shovelling snow, others, single men, were sent to relief camps. Passenger and freight traffic during the holidays was exceptionally heavy, although severe snow storms almost paralysed truck service. Trade, both wholesale and retail, was satisfactory, with collections easier. The usual activity prevailed in the women's section.

The call for farm workers in the Province of Quebec was very light. Improvement was noted in logging at Chicoutimi and Rouyn, but declines were reported from Hull and Quebec City. In the former locality, manufacturing firms were working steadily and in Montreal, the clothing industry was good, while tobacco and shoe factories were rather quiet and metallurgy only fair. Conditions were good at Quebec City, but unchanged at Sherbrooke and Three Rivers. There was some employment for building workers at Hull, but quietness prevailed in this work at Montreal, Quebec and Three Rivers. At Sherbrooke a number of men had been at work on highway construction. Transportation was active. Trade in many centres was better due to Christmas. The demand for domestic workers remained steady and many regular household workers and charwomen were placed.

Except for occasional orders for winter choremen, there were few requests for farm labour in the Province of Ontario. Slackness in logging was seasonally normal, largely due to the holidays when many of the men returned home, although in some districts cutting was completed and workers were being released. Other camps were still filled to capacity. Mining was quiet. Stocktaking con-

siderably reduced staffs in manufacturing establishments, but as this was a temporary reduction only, many workers would be rehired early in the new year. On the whole, manufacturing industries in comparison with previous years' levels showed improvement, both in the number of employees on the payrolls, as well as in volume of output. Building construction registered little change. For the most part quietness prevailed in this line, while relief work on highways and other government projects continued. Transportation and trade were good, both divisions showing the influence of the holidays. Registration of female applicants was lower at Christmas time and difficulty was experienced in obtaining casual workers during that period and, as a consequence, several good workers accepted two, three and four appointments in various homes during the day.

Owing to the holiday season, orders and placements in farming in the Prairie Provinces were considerably fewer. Logging also was quiet. Lower temperatures resulted in increased production at all mines, although this did not cause a demand for help, as nearly all had their complement of workers. Factories at Winnipeg and Edmonton were busy, while the manufacturing situation at Medicine Hat remained unchanged. Nearly all building construction was at a standstill, but relief work continued in the different provinces. There was a good volume of trade, both wholesale and retail. In Winnipeg, requests for charwomen were more numerous, though fewer placements were effected, due to loss of time for the holidays. A few domestics in Saskatchewan and Alberta were placed on farms under the Winter Farm Labour Relief Scheme.

Farming was quiet in British Columbia, although pruning was being done in the orchards. Fruit packing houses were running about three days per week and some shipments of fruit were being made. Logging showed little activity, many camps and mills being closed down for the holidays. At New Westminster all sawmills were reported running full time and shingle mills on half time. Mining showed improvement, although there was little demand for help. Manufacturing was unchanged. Building construction was slow and work on various relief projects continued. Shipyards were quiet at Prince Rupert and Victoria, but longshoremen were busy at New Westminster, Prince Rupert and Vancouver. Trade was good. Permanent jobs in the women's division were hard to fill, while casual work therein showed more activity.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1 was 9,462, the employees on their payrolls numbering 985,155 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,761 having an aggregate membership of 169,584 persons, 13.3 per cent

of whom were without employment on December 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the beginning of December, 1935, as reported by Employers

Following a period of marked expansion, industrial employment at the beginning of December showed a seasonal contraction, which was the first general decline indicated since April 1. The reduction at the latest date rather exceeded the average loss between November 1 and December 1 in the years 1921 to 1934, but the situation continued decidedly more favourable than in any month of 1934, 1933 or 1932, being also better than in the Autumn and early winter of 1931.

The Dominion Bureau of Statistics tabulated data from 9,462 employers, whose payrolls were reduced from 1,013,721 at the beginning of November, to 985,155 on December 1, 1935. The unadjusted index (1926=100), then stood at 104.6, compared with 107.7 at November 1, 1935, and 98.9 at the same date in 1934. In preceding years since 1920, the December 1 index has been as follows:—1933, 91.8; 1932, 83.2; 1931, 99.1; 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 108.1; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3. As a result of the more than normal curtailment in staffs at the latest date, the seasonally adjusted index number declined from 103.5 at November 1, to 102.4 at December 1.

Manufacturing (notably of food, lumber, iron and steel and textile products), mining, communications, transportation as a whole, construction and services showed seasonal recessions at December 1, 1935. The losses in manufacturing and construction exceeded the

average declines indicated in those industries at the same period of the last fourteen years, but those in transportation were decidedly below the average. On the other hand, logging, coal-mining, shipping and stevedoring and trade reported improvement. The gain in retail establishments was considerably greater than the average seasonal advance noted in the years since 1920, while that in bush work was rather smaller than usual at this time of year, partly because the weather has been unfavourable in many districts for that kind of work.

A fuller analysis of the situation in the various industrial groups appears below.

A brief review of general conditions at the end of the year shows that the index of 104.6 at December 1 was 10.8 p.c. higher than at the opening of 1935; since the average advance between January 1 and December 1 in the last fourteen years has been between seven and eight p.c., the improvement effected during the year now drawing to a close has considerably exceeded the normal. An outstanding feature of the 1935 situation has been the pronounced and general revival in manufacturing, although most of the industries included in the monthly surveys of employment showed decided betterment as compared with the last few years. Geographically, the recovery has also been widespread.

A review of employment during the year 1935, in considerable detail, appears elsewhere in this issue.

### Employment by Economic Areas

Each of the five economic areas registered seasonally lowered activity at December 1; firms in Ontario released the largest number of persons, but the losses in the Prairie Provinces were proportionately greater. Employment in each of these divisions was brisker than at the beginning of December in 1934, 1933 or 1932.

*Maritime Provinces.*—The trend of employment in the Maritime Provinces has generally been downward at December 1 in the fourteen preceding years for which data are available, but the losses this year exceeded the

to statements from 2,239 employers of 286,467 persons, or 3,510 fewer than in the preceding month. Employment has shown a falling-off at the beginning of December in twelve of the preceding fourteen years for which statistics have been prepared; the seasonal shrinkage at the latest date, however, was less than the average. The index declined from 105.0 on November 1 to 103.8 on December 1, 1935, when it was between seven and eight p.c. higher than at December 1, 1934. Manufacturing and construction reported marked curtailment; within the first named, the largest losses, which were seasonal in character, were in the textile, lumber, food, pulp and paper

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

average declines reported since 1921. The index at the latest date, standing at 107.5, was higher than at December 1 in any of the last three years. Most of the decrease on the date under review took place in construction, although manufacturing, particularly of food products, was also slacker, the losses being seasonal in character. Logging showed substantial gains, and coal-mining, shipping and stevedoring and retail trade were also seasonally active. Data were received from 654 firms employing 76,711 persons, as against 79,193 on November 1.

*Quebec.*—For the first time since May 1, there was a contraction in Quebec, according

and clay, glass and stone divisions, while tobacco and beverage factories were decidedly busier, and moderate improvement occurred in rubber, electrical apparatus and iron and steel plants. On the other hand, logging and trade recorded greatly increased employment of a seasonal nature, while transportation and communications were also busier.

*Ontario.*—Employment in Ontario showed a decrease at the beginning of December, when manufacturing and construction reported large losses, and mining and communications were also slacker than in the preceding month. On the other hand, considerable expansion was indicated in trade and logging. Within the

group of factory employment, there were pronounced gains in the tobacco industry, and smaller increases in rubber and non-ferrous metal plants, while lumber mills, food, textile, iron and steel and some other plants were seasonally slacker. The firms making returns for December 1, 1935 (4,180 in number), had 410,441 employees, compared with 422,383 at the beginning of November. The index, at 107.0 at December 1, 1935, compared favourably with that of 101.7 at the same date in 1934.

*Prairie Provinces.*—Seasonal declines on a scale above the average noted in the years since 1920 were indicated in the Prairie Provinces at the date under review; the 1,382 reporting employers had let out 8,533 workers since November 1, thereby reducing their staffs to 128,138 on December 1. Retail trade, logging and building construction increased the numbers at work, the seasonal gains in retail trade being very large. On the other hand, transportation, construction and manufactur-

ing reported reduced employment; the losses in the first two groups were considerable. Employment at the beginning of December was at a higher level than at the same date in 1934, although the falling-off then reported had been on a much smaller scale.

*British Columbia.*—Further contractions occurred in British Columbia, in accordance with the movement almost invariably noted at the beginning of December in this record of fifteen years. There were gains in mining, retail trade and highway construction; on the other hand, manufacturing was decidedly slacker, chiefly in food factories, where the decline was seasonal in character. Transportation and building and railway construction also released employees. A smaller decrease had been recorded on December 1, 1934, when the index was over six points lower. The 1,007 firms reporting for the date under review had 83,398 employees, as compared with 85,497 in their preceding statement.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS.

(AVERAGE CALENDAR YEAR 1926=100).

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Dec. 1.....	104.6	107.5	103.8	107.0	101.3	99.3
Relative Weight of Employment by Economic Areas as at Dec. 1, 1935.....	100.0	7.8	29.1	41.6	13.0	8.5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

### Employment by Cities

Of the eight centres for which separate tabulations are made, Montreal, Windsor and Winnipeg showed improvement as compared with November 1, while lessened activity was indicated in Quebec City, Toronto, Ottawa, Hamilton and Vancouver. The situation in each of these eight cities was considerably better than at December 1 in any of the last three years.

*Montreal.*—There was a further slight increase in the employment afforded by the 1,298 co-operating firms, whose staffs were enlarged by 195 persons to 138,249 at the beginning of December. Manufacturing on the whole showed rather more employment, mainly in tobacco, electrical apparatus and iron and steel plants, while textile factories were seasonally inactive; construction was also duller. On the other hand, retail trade and transportation reported improvement. The large gains in the former were seasonal, while those in the

latter took place chiefly in shipping and stevedoring. A general loss had been noted on the same date of last year, when the index of employment was over five points lower than that of 91.9 at the latest date.

*Quebec.*—Industrial activity in Quebec City declined moderately, 179 workers being laid off by the 166 employers whose returns were received, and who had 13,143 employees on December 1. The largest contractions were in manufacturing, but services and construction were also slacker, while retail trade and transportation showed improvement. The general recession indicated at the same date in 1934 had been on a larger scale, and the index was then between six and seven points lower.

*Toronto.*—Decreases in personnel were recorded in Toronto by 1,406 firms who employed 123,162 persons, as compared with 124,250 at the beginning of November. Trade showed noteworthy improvement, while services and

Dec. 1.....	91.9	99.0	100.8	103.6	100.4	118.7	94.1	100.3
Relative Weight of Employment by Cit- ies as at Dec. 1, 1935.	14.0	1.3	12.5	1.4	3.3	1.6	4.1	3.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

transportation also reported greater activity. Manufacturing, however, was dull, the textile, iron and steel, electrical apparatus and food groups reporting reductions in their working forces. Smaller losses on the whole had been registered on December 1 of last year, but the index of employment then was nearly four points lower than that of 100.8 at the latest date.

*Ottawa.*—There was a falling-off in Ottawa, where manufacturing reported considerable curtailment (mainly in the pulp and paper group), and transportation was also quieter. On the other hand, construction and trade afforded more employment. One hundred and seventy-seven employers recorded a combined pay-roll of 13,385 workers, as against 13,463 in their last report. Employment was in greater volume than at the beginning of December, 1934, when a larger decline had been indicated.

*Hamilton.*—A small decrease occurred in Hamilton, where an aggregate working force of 32,232 persons was employed by the 277 firms furnishing data, who had 32,537 employees on their November 1 staffs. Manufacturing as a whole was rather slacker, due to curtailment in the electrical apparatus and iron and steel groups. In the non-manufacturing divisions, construction also showed some curtailment, but trading establishments reported larger staffs. The index, at 100.4, was over fourteen points higher than on the same date of a year ago, when a minor decline had been noted.

*Windsor.*—There was a further advance in Windsor, mainly in manufacturing. Statements were tabulated from 172 employers with 16,058 workers, compared with 15,602 in the preceding month. A smaller gain had been indicated at December 1, 1934, but the index was then many points lower.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

Relative Weight of Employment by Industries as at Dec. 1, 1935.....	100.0	51.8	5.2	6.1	2.2	10.2	11.4	2.6	10.5

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

**Winnipeg.**—Employment improved substantially in Winnipeg, according to data received from 461 firms employing 40,299 persons, as compared with 39,172 on November 1. Little general change took place in manufacturing; there was a decline in transportation and road construction, while trade showed greatly heightened activity of a seasonal character. The general index, at 94.1, was seven points higher than on the same date of last year, when a smaller increase in employment had been noted.

**Vancouver.**—Employment in Vancouver again declined, according to 424 employers of 32,117 workers, as compared with 32,469 in the preceding month. Manufacturing, mainly of food and metal products, was rather slack, and construction also afforded less employment, but trade showed improvement in preparation for the holiday seasons. No general change had been reported at the beginning of December,

1934; the index then was over eleven points lower than that of 100.3 reported at the latest date.

### Employment by Manufacturing Industries

A seasonal decrease in employment occurred on December 1 in manufacturing establishments, 5,579 of which employed 510,365 operatives, compared with 521,318 on November 1. This decline of 2.1 p.c. was just about equal to the normal seasonal loss indicated in the experience of the fourteen preceding years for which data are available, so that the index, after correction for the seasonal movement, showed very little change from the preceding month, standing at 102.4 at the beginning of December, as compared with the seasonally adjusted index of 102.5 at November 1. Tobacco and rubber works reported heightened activity, the gain in the former being considerable. On the other hand, there were

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight <sup>1</sup>	Dec. 1, 1935	Nov. 1, 1935	Dec. 1, 1934	Dec. 1, 1933	Dec. 1, 1932	Dec. 1, 1931	Dec. 1, 1930

Miscellaneous.....	.6	125.0	124.6	119.2	103.6	98.4	98.2	107.6

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

reductions (in most cases of a seasonal character) in the food, lumber, iron and steel, textile, leather, pulp and paper, clay, glass and stone, electrical apparatus, electric light and power, non-ferrous metal and non-metallic mineral product industries. A smaller decline, on the whole, had been indicated at December 1, 1934, but the index then was some ten points lower.

The improvement in manufacturing has been a noteworthy feature of the situation during 1935. The December 1 index of 101.4, was fourteen points or sixteen p.c. higher than at the beginning of 1935; this was an increase during the year that very considerably exceeded the average advance indicated between January 1 and December 1 in the experience of the years since 1920. During 1935, the general movement in manufactures was uninterruptedly favourable from the beginning of January until November 1, the longest period of continuous expansion noted in this record of fifteen years. Curtailment was indicated in the last month of 1935, in conformity with the trend almost invariably in evidence at the beginning of December in the years for which data are available; as has already been stated, the shrinkage involved a proportion of the aggregate payroll just about equal to the average. The gains over the year have been widely distributed among the various industries grouped under manufacturing, while all five economic areas have shared in the general recovery in these important classes.

*Animal Products—Edible.*—There were further seasonal declines in fish canneries, while meat-packing plants were slightly busier. The result was a reduction of 999 in the staffs of the 273 firms making returns, who had 21,977 employees. This decrease involved a larger number of persons than that recorded on the same date in 1934, but employment was then at a lower level.

*Leather and Products.*—Employment in this industry showed a considerable loss at the beginning of December, occurring almost entirely in boot and shoe factories. Statements were tabulated from 281 manufacturers, employing 21,161 persons, as compared with 21,720 at November 1. Rather smaller reductions had been noted at December 1, 1934; the index was then several points lower.

*Lumber and Products.*—Seasonal curtailment of operations on a larger scale than at the beginning of December, 1934, took place in this group; the losses were principally in rough and dressed lumber mills and occurred mainly in Quebec and Ontario. Data were received from 814 firms in this industry, whose staffs declined from 39,936 workers at November 1 to 36,659

at December 1. The index was a few points higher than on the same date a year ago.

*Plant Products—Edible.*—There was a seasonal reduction of 3,366 employees in the vegetable food factories whose returns were received; they reported a combined working force of 33,180 operatives. The curtailment indicated was chiefly in canneries, but sugar refineries were also slacker. The largest losses were in Ontario and British Columbia. The index of employment on December 1, 1935, was decidedly higher than at the beginning of December, 1934.

*Pulp and Paper.*—Statements were received from 592 manufacturers in the pulp and paper industry, whose payrolls were decreased by 209 persons to 59,934 at the beginning of December. Employment was brisker than on the same date in 1934, when a larger decline had occurred. Improvement took place in the production of paper goods and in printing and publishing establishments, while pulp and paper mills released employees. The largest reductions in personnel were in Quebec.

*Rubber Products.*—A moderate gain in activity was reported in the rubber group. The working forces of the 52 co-operating establishments stood at 12,522 compared with 12,271 on November 1. A smaller increase had also been shown on the corresponding date in 1934, and the level of employment was then lower.

*Textile Products.*—There was a seasonal recession in employment in these industries; most of this occurred in the clothing trades, although headwear factories were also slacker. Returns were compiled from 984 manufacturers employing 100,116 workers, or 1,470 fewer than in the preceding month. There was a decidedly larger loss at the beginning of December, 1934, when the index was much lower.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories greatly advanced, but there were moderate decreases in beverage works. An aggregate payroll of 18,892 persons was indicated by the 172 co-operating firms, compared with 16,080 at the beginning of November. Smaller gains, on the whole, had been shown on the same date in 1934, but the index was then between fifteen and sixteen points lower.

*Clay, Glass and Stone Products.*—Further seasonal reductions occurred in this industry, 463 persons being released by the 194 co-operating manufacturers, who had 8,359 on their payrolls. A downward tendency was also in evidence on December 1, 1934, when the volume of employment was smaller.

*Chemicals and Allied Products.*—A slight advance was indicated in the chemical group at

December 1, according to data received from 201 firms having 11,102 employees, as compared with 11,054 in the preceding month. A falling-off had been noted at the beginning of December, 1934, when the index was lower than at the date under review.

*Electric Light and Power.*—There was a decrease in employment in electric current plants, 99 of which had 14,667 employees, or 190 fewer than at November 1. The greatest losses occurred in Ontario. A larger reduction had been reported at the beginning of December, 1934, and the index number then was rather lower.

*Electrical Appliances.*—A decline was noted in electrical apparatus plants; 109 manufacturers employed 13,647 persons, as compared with 14,357 in their last report. Employment on December 1, 1934, was slacker than on the date under review, although the reductions then reported involved fewer workers.

*Iron and Steel Products.*—There was a considerable contraction in employment in iron and steel factories; the rolling mill, machinery, agricultural implement, vehicle, heating appliance and other groups released employees. On the whole, there was a decrease of 2,336 in the staffs of the 849 co-operating manufacturers, who employed 114,519. The general level of activity in this group was decidedly higher than at the same date in the preceding year, when little general change had been indicated.

*Non-Ferrous Metal Products.*—A decline occurred in this division at the beginning of December, according to data received from 158 employers of 19,953 persons, as compared with 20,136 in the preceding month. The index was much higher than on December 1, 1934; a slightly larger loss had then been registered.

*Non-Metallic Mineral Products.*—There was a further reduction in the manufacture of non-metallic mineral products; 140 firms employed 13,967 workers, or 240 fewer than at the beginning of November. Activity in this group was higher than on December 1, 1934, when curtailment had also been noted.

### Logging

Continued advances were shown in logging, in which there were general increases. Statements were tabulated from 317 logging camps having 51,543 employees, or 7,092 more than in their last report. This gain involved a smaller number of persons than that registered at the same date in 1934, being also below the average increase from November to December in the years since 1920; this was

probably a result of the unsuitable weather for bush operations which has recently prevailed in various parts of the country. However, the index was higher than at December 1 in other years of the record, except 1934 and 1929.

### Mining

*Coal.*—Employment in coal mines, increased at the beginning of December, 235 persons being added to the payrolls of the 103 co-operating operators, who had 25,378 employees. There was improvement in the Maritime Provinces and British Columbia. A larger gain had been shown on the corresponding date in 1934; the index number then was slightly higher.

*Metallic Ores.*—There was a decrease in employment in metallic ore mines; 372 workers were laid off since November 1 by the 168 employers from whom information was received, and who had 27,618 persons on their pay lists. A gain had been indicated in December, 1934, but the number then employed by the firms reporting in this division was decidedly smaller.

*Non-Metallic Minerals other than Coal.*—Curtailment in employment was noted in the extraction of non-metallic minerals other than coal. In this division 77 firms furnished data showing that they employed 7,138 persons, as compared with 7,562 on November 1. Activity was greater than in the same month of 1934, although improvement over the preceding month had then been indicated.

### Communications

Decreases in personnel were noted on telegraphs and telephones; 104 persons were released by the co-operating companies and branches, which had 21,428 employees on the date under review. The index was slightly higher than in the early winter of 1934.

### Transportation

*Street Railways and Cartage.*—This division was seasonally quiet, the largest losses in employment occurring in the Prairie Provinces. Data were compiled from 213 firms whose staffs declined from 26,050 at November 1 to 25,628 at the beginning of December. This loss was not so pronounced as that recorded on the same date in 1934, and the index then was lower.

*Steam Railways.*—The trend of employment in railway operation was downward, 101 employers and branches reporting 58,167 workers, as compared with 59,024 in the preceding month. There were decreases in the

Western Provinces. The index number was slightly higher than at December 1, 1934, when much larger reductions had been indicated.

*Shipping and Stevedoring.*—Improvement was registered in shipping; an increase of 570 persons was reported by the 104 co-operating employers, whose staffs aggregated 16,459. A decline had been noted on December 1, 1934, but the index then was much lower.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 692 contractors employing 27,240 persons, as compared with 28,661 on November 1. The most extensive curtailment was in Quebec. More pronounced shrinkage had been reported on December 1, 1934, and employment was then in smaller volume.

*Highway.*—Important decreases were noted in the staffs of the 358 highway contractors furnishing statistics, who employed 63,324 workers on December 1, as compared with 83,739 in the preceding month. A smaller number of persons had been laid off at December 1, 1934, when the index was many points higher.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline involving more workers than that which occurred at the same date in 1934; the index was then fractionally lower than at December 1, 1935. Statistics were received from 33 contractors and divisional superintendents whose staffs were diminished from

28,521 men at November 1 to 22,033 at the date under review. The most pronounced contractions were in Ontario, although there were large losses throughout the country.

### Services

Reductions were reported by the 456 co-operating service firms, who had 25,092 employees, 221 fewer than in the preceding month. Hotels and restaurants showed curtailment, while little general change was indicated in other divisions. Employment was slightly more active than on December 1, 1934, when a small gain had been recorded.

### Trade

Important seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 1,177 trading establishments with 103,742 employees, or 5,214 more than at November 1. The index was higher than at the same date in the preceding year, when smaller advances had taken place. The additions to payrolls recorded at December 1, 1935, exceeded the average increase at that date in the years since 1920.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of November, 1935

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

No variation was apparent in the local trade union situation, as a whole, at the close of November from the preceding month, the slight increases and decreases in activity shown in the various groups of industries being of an offsetting nature. For November

reports were received from a total of 1,761 labour organizations embracing 169,584 members, 22,575 or 13.3 per cent of whom were idle on the last day of the month, the same percentage as was reflected in October. (A higher level of activity was maintained than in November a year ago when unemployment stood at 17.5 per cent). Nova Scotia and Quebec unions indicated an upward trend of employment from October though the change was but nominal, New Brunswick, Manitoba, Saskatchewan and Alberta unions showing losses on a very small scale. In Ontario and British Columbia, however, the same volume of work was afforded as in October. When a comparison is made with the returns for November, 1934, British Columbia unions especially showed pronounced improvement during the month reviewed, particularly in navigation and in building and construction

operations, and Manitoba, Ontario and Quebec gains of lesser proportions, though noteworthy. In Nova Scotia, Saskatchewan and Alberta also minor increases in available work were recorded. New Brunswick unions alone indicated a lessening in employment which was quite slight.

Each month the records of unemployment in the largest city of each province with the exception of Prince Edward Island are tabulated separately. During November, Halifax with a gain of nearly 4 per cent showed the greatest improvement of any of the cities when compared with October conditions. In Toronto, employment increased by over 2 per cent, Saint John and Edmonton showing

members, however, were considerably quieter than in November, 1934, and in Edmonton nominal recessions were registered.

Appearing with this article is a chart which shows the trend of unemployment by months from January, 1929, to date. The level of the curve at the close of November remained identical with that of October, showing that unemployment was maintained at exactly the same volume at the end of each of these months. The point reached by the curve was, however, below that of November, 1934, an indication of more favourable conditions during the month reviewed.

In the manufacturing industries employment was in greater prevalence during

#### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

slight advancement. The trend of activity indicated from Winnipeg was favourable though the variation from October was almost negligible. Regina and Montreal unions, however, suffered small losses in work afforded from the previous month, while in Vancouver the situation was practically unchanged, though tending toward lessened activity. Pronounced recovery over November a year ago was evident among Vancouver unions, and in Montreal, Toronto and Winnipeg the expansion noted was quite marked. Among Regina members also, the level of activity was slightly higher, and in Halifax fractional gains occurred. Conditions for Saint John

November than in either the previous month or November a year ago, though the gains in the former comparison were very slight. This was evident from the reports tabulated from 483 associations, with an aggregate of 54,217 members, 7,397 of whom were without work at the end of the month, a percentage of 13.6 in contrast with percentages of 14.2 in October and 18.0 in November, 1934. An important factor in the improvement reported over October was the better situation prevailing in the iron and steel trades, particularly among machinists and railway carmen. Increased slackness on a substantial scale was, however, noted by wood, and hat and cap

workers, and bakers and confectioners. Glass workers, whose membership was quite small, and general labourers were also afforded a much better volume of work, and among jewellery, textile and carpet, and garment workers, printing tradesmen and metal polishers the employment level was somewhat higher. Retarded activity of fair-sized pro-

portions was reflected by cigarmakers and the tendency for brewery, leather and fur workers, and papermakers was toward lessened employment, though the change from October was slight. A decidedly more favourable situation than in November, 1934, was indicated among general labourers and garment workers, and extensive recovery was evident among iron and steel workers, metal polishers and fur workers. Papermakers and printing tradesmen also, showed employment expansion, though on a small scale. Wood, hat and cap, and leather workers, cigarmakers, and bakers and confectioners, on the contrary, suffered large losses in available work from November a year ago, and employment for jewellery, glass, brewery, and textile and carpet workers subsided slightly.

Unemployment among coal miners remained in practically the same volume during November as in the preceding month according to the returns compiled from 51 unions involving a membership of 15,257 persons. Of these, 707 were without work at the end of the month, a percentage of 4.6 compared with 4.7 per cent of idleness in October. A slightly upward employment movement was noted from November, 1934, when 5.4 per cent of inactivity was recorded. Nova Scotia and British Columbia miners showed a slight rise in work afforded over October which was largely offset by the small contractions evident in the Alberta mines. Some slowing up of activity was reflected in the British Columbia mines from November a year ago while in Nova Scotia there was little variation, though the situation tended favourably. Alberta miners reported the same volume of employment in both months compared. Short time work, however, continued prevalent throughout November.

In the building and construction trades during November nominal increases in employment only were shown from October, as evident from the reports tabulated from a total of 197 associations, including 19,498 members. Of these, 42.5 per cent were registered as idle on the last day of the month in contrast with a percentage of 42.8 in October. A much greater volume of work was afforded these tradesmen than in November, 1934, unemployment for that month standing at 61.6. Hod carriers and building labourers showed a substantially better situation than in October, and among tile layers, lathers and roofers, and carpenters and joiners noteworthy gains occurred. Bricklayers, masons and plasterers also indicated an upward employment trend though the change from the previous month was very slight. On the contrary, granite and stone-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

cutters, and bridge and structural iron workers registered a large drop in available work, and among plumbers and steamfitters, and steam shovelmen activity was considerably curtailed. Recessions, on a moderate scale, were apparent among painters, decorators and paperhangers, and employment for electrical workers was slightly retarded. All tradesmen with the exception of painters, decorators and paperhangers shared in the marked improvement noted over November, 1934, bricklayers, masons and plasterers, and tile layers, lathers and roofers particularly showing large increases, though in all trades the gains recorded were quite extensive. The contractions evident among painters, decorators and paperhangers were, however, of moderate degree.

The 775 unions in the transportation industries from which reports were received during November covering a total of 56,129 members, showed that 4,191 or 7.5 per cent were idle at the end of the month in contrast with a percentage of 7.2 in October. Steam railway employees, whose returns constituted over 77 per cent of the entire group membership reported, showed a very slight tendency toward retarded employment as did also teamsters and chauffeurs. In navigation, conditions were somewhat brighter than in October, while street and electric railway employees indicated a very nominal gain in activity. Improvement in the transportation industries, as a whole, was noted over November, 1934, when 10.4 per cent of the membership recorded was idle, navigation workers showing decidedly better conditions during the month reviewed, although steam, and street and electric railway employees also participated in the total advancement. There was some falling off in activity, however, among teamsters and chauffeurs.

Retail shop clerks were quite busy during November, unemployment standing at 1.8 per cent as compared with percentages of 5.1 in October and 5.9 in November, 1934. The November percentage was based on the reports compiled from 5 associations of these workers with 1,766 members.

Civic employees with 74 associations covering a total of 8,045 members during November indicated that 159 were without work on the last day of the month, a percentage of 2.0 as contrasted with 2.7 per cent of inactivity in October. Fractional curtailment in work

afforded was noted from November, 1934, when 1.2 per cent of idleness was registered.

The trend of employment in the miscellaneous group of trades during November was favourable though the change from October was very slight, and improvement of fairly noteworthy proportions was evident from November, 1934. Reports were tabulated for November from 129 unions with a membership aggregate of 5,388 persons, 573 or 10.6 per cent of whom were unemployed at the end of the month compared with percentages of 10.9 in October and 15.4 in November a year ago. Hotel and restaurant, and theatre and stage employees, and barbers indicated a slightly better employment level than in October, while among stationary engineers and firemen, and unclassified workers retarded activity, on a small scale, was shown. Compared with the returns for November, 1934, conditions for theatre and stage employees improved substantially during the month reviewed, and lesser gains were reflected by stationary engineers and firemen, and barbers. Among hotel and restaurant employees, and unclassified workers, however, the tendency was toward lessened employment, but the change from November, 1934, was quite small.

Fishermen with 4 unions covering 611 members showed that 193 were idle on the last day of the month, a percentage of 31.6 compared with percentages of 28.6 in October, and 83.3 in November a year ago.

Among lumber workers and loggers during November somewhat quieter conditions prevailed than in October, but the situation was much improved from November, 1934. This was apparent from the reports received from 4 unions of these workers, with 622 members, 12.1 per cent of whom were out of work at the end of the month in contrast with 9.9 per cent of inactivity in October and 38.8 per cent in November, 1934.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1934 inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1932 inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for November, 1935

Losses of about five per cent and six per cent, respectively, in the volume of business transacted during November, 1935, were reported by the offices of the Employment Ser-

vice of Canada from the previous month, October, and from November a year ago. Under both comparisons the greatest loss in placements was in construction and mainten-

ance, this being due to less relief work being provided by the Provincial and Federal governments. A substantial decline from October was also recorded in services and other losses of lesser degree in all industrial divisions, except logging and farming, which recorded gains. When compared with the corresponding month of 1934, declines were shown in farming, transportation and trade, as well as in construction and maintenance, mentioned above, but gains were registered in services, manufacturing, logging and mining. Under each comparison, however, some of the changes recorded, both plus and minus, were nominal only.

half of November, 1935, in contrast with the ratios of 62.4 and 60.6 during the corresponding periods of 1934. The ratios of placements to each 100 applications during the periods under review were 46.1 and 48.8, as compared with 59.4 and 58.0 during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1935, was 1,288, as compared with 1,364 during the preceding month and with 1,378 in November a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratios of vacancies offered, and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada compilations being made semi-monthly. It will be noted that the trend of the curves of vacancies and placements in relation to applications declined during the first half of the month and rose about three points during the latter half, but at the close of the period under review both levels were about nine points below those recorded at the end of November, 1934. The ratio of vacancies to each 100 applications was 47.8 during the first half and 51.3 during the second

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,602, in comparison with 2,512 in October, 1935, and with 2,241 during November, 1934.

The average number of placements made daily by the offices of the Service during November, 1935, was 1,234 of which 870 were in regular employment and 364 in work of one week's duration or less, as compared with a total daily average of 1,298 during the preceding month. Placements in November a year ago averaged 1,315 daily, consisting of 745 placements in regular and 570 in casual employment.

During the month of November, 1935, the offices of the Service referred 32,440 persons to vacancies and effected a total of 30,835 placements. Of these, the placements in regular employment were 21,730, of which 17,253 were of men and 4,477 of women, while placements in casual work totalled 9,105. The number of vacancies reported by employers was 23,579 for men and 8,617 for women, a total of 32,196, while applications for work numbered 65,033, of which 50,707 were from men and 14,326 from women. Reports for October, 1935, showed 35,464 positions available, 65,300 applications made and 33,737 placements effected, while in November, 1934, there were recorded 35,809 vacancies, 58,243 applications for work and 34,189 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1925, to date:

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935 (11 months).....	207,970	117,688	325,658

#### NOVA SCOTIA

There was a gain of nearly one per cent in the number of positions offered through employment offices in Nova Scotia during November when compared with the preceding month, but a loss of over 32 per cent in comparison with the corresponding month of 1934. Placements also were nearly 3 per cent higher than in October, but nearly 31 per cent below the corresponding month of the previous year. The decline from November a year ago was due to a reduction in relief placements on road construction, as a small loss in services was more than offset by gains in logging and transportation. Industrial divisions in which most of the placements were effected during the month were: logging, 84; construction and maintenance, 392; and services, 330, of which 234 were of household workers. During the month 250 men and 84 women were placed in regular employment.

#### NEW BRUNSWICK

Orders received at employment offices in New Brunswick during November called for nearly 20 per cent fewer workers than in the

preceding month, but nearly 6 per cent more than during the corresponding month of 1934. There was a decline of 17 per cent in placements when compared with October, but a gain of nearly 5 per cent in comparison with November, 1934. Small placement gains over the corresponding month a year ago were reported in construction and maintenance and services. These increases were partly offset by declines in manufacturing and logging. During the month 208 placements were made under construction and maintenance and 549 in services. Of the latter, 424 were of household workers. Placements in regular employment numbered 208 of men and 73 of women.

#### QUEBEC

During the month of November positions offered through employment offices in the Province of Quebec were nearly 12 per cent less than in the preceding month, but nearly 17 per cent above the corresponding month of the previous year. There was a decline of nearly 9 per cent in placements when compared with October, but an increase of nearly 21 per cent in comparison with November, 1934. The increase in placements over November a year ago was due to substantial gains in logging and services. Small losses were reported in construction and maintenance, trade and manufacturing. Placements by industrial divisions included: manufacturing, 67; logging, 1,481; construction and maintenance, 608; trade, 86; and services, 2,476, of which 1,977 were of household workers. During the month 2,362 men and 1,542 women were placed in regular employment.

#### ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during November, were nearly 25 per cent less favourable than in the preceding month and nearly 28 per cent below the corresponding month of 1934. There was a decrease also in placements of over 23 per cent when compared with October and of nearly 27 per cent in comparison with November a year ago. The reduction in placements from November, 1934, was due to the curtailment of relief work on highway construction, as a decline in bush placements was more than offset by gains in farming, manufacturing and services. Placements by industrial divisions included: manufacturing, 598; logging, 656; farming, 652; transportation, 173; construction and maintenance, 4,566; trade, 287; and services, 3,353, of which 2,270 were of household workers. Placements in regular employment numbered 4,386 of men and 1,468 of women.

\* 76 Placements effected by offices since closed.

## MANITOBA

Employment offices in Manitoba received orders for nearly 16 per cent more workers than in the preceding month and over 16 per cent more than during the corresponding month of the previous year. There was a gain also in placements of nearly 14 per cent when compared with October and of over 15 per cent in comparison with November, 1934. When comparing placements by industrial groups during the month under review with November, 1934, a substantial increase was reported in construction and maintenance, made up largely of relief placements on highway construction and a small gain in mining. Farming showed the largest loss, followed by smaller declines in services and logging. Industrial divisions in which most of the placements were effected during the month were: logging, 165; farming, 1,392; construction and maintenance, 2,465; and services, 640, of which 549 were of household workers. During the month 4,033 men and 405 women were placed in regular employment.

## SASKATCHEWAN

The number of positions offered through employment offices in Saskatchewan during November was over 4 per cent less than in the preceding month and over 16 per cent less than during the corresponding month of the previous year. There was a decrease also in placements of nearly 11 per cent when compared with October and of 19 per cent in comparison with November, 1934. Except for a small gain in manufacturing, all groups showed reductions in placements when compared with November a year ago. The only losses of importance, however, were in farming, logging and mining. Placement by industrial divisions included: manufacturing, 69; farming, 923; construction and maintenance, 420; and services, 666, of which 513 were of household workers. Regular placements numbered 1,367 of men and 383 of women.

## ALBERTA

There was an increase of over 18 per cent in the number of positions offered through employment offices in Alberta during November when compared with the preceding month and of nearly 22 per cent in comparison with the corresponding month of 1934. Placements also were nearly 15 per cent higher than in October and nearly 19 per cent above November a year ago. Although the gain in placements over November, 1934, was due to increased farm placements, there was considerable change in other groups, improvement in mining, services, manufacturing and trade being offset by declines in

construction and maintenance and logging. Placements by industrial divisions included: logging, 96; farming, 1,094; mining, 113; construction and maintenance, 1,952; and services, 443, of which 354 were of household workers. There were 3,025 men and 313 women placed in regular employment during the month.

## BRITISH COLUMBIA

During the month of November orders received at employment offices in British Columbia called for approximately the same number of workers as in the preceding month, but 18 per cent less than during the corresponding month of the previous year. There was a nominal change only in placements when compared with October, but a decline of 18 per cent in comparison with November a year ago. Relief placements on road and airport construction were considerably less than during November, 1934, and accounted for the adverse change under this comparison. Gains were reported in services, logging, transportation and trade, but none were large. Industrial divisions in which most of the placements were effected during the month were: farming, 61; construction and maintenance, 2,606; and services, 622, of which 392 were of household workers. During the month 1,622 men and 209 women were placed in regular employment.

## Movement of Labour

During the month of November, 1935, the offices of the Employment Service of Canada made 21,730 placements in regular employment, 9,419 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 750 were granted the Employment Service reduced transportation rate, 684 journeying to points within the same province as the despatching office and 66 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to proceed to employment at a distance for which no workers are available locally.

Quebec transfers at the reduced rate during November were of bushmen, 3 in number, who were despatched by the Hull office to employment in the Pembroke zone. Offices in Ontario granted 530 certificates for reduced transportation during November, all of which were to points within the province. Receiving certificates at Port Arthur 355 bush workers. 95 highway construction workers, 12 mine

workers, one hotel porter, one town domestic and 2 cookees travelled to situations within the same zone, while to centres within their respective zones also, the Sudbury office transferred 47 bush workers, and the Fort William office 12 bush workers and 5 carpenters. The Manitoba labour movement during November originated at Winnipeg and comprised the transfer of 69 persons, 6 within the province and 63 to points outside. Workers journeying to provincial employment were destined to the Winnipeg zone and included 4 farm hands and 2 mine mechanics. Of the persons despatched to other provinces 62 were for the Port Arthur zone, among whom were 59 bush workers, one tractor operator, one cook and one farm domestic. The one remaining interprovincial transfer was of a farm housekeeper sent to Regina. Taking advantage of the Employment Service reduced transportation rate in Saskatchewan during November, 28 persons journeyed to provincial centres. From Saskatoon, 3 bushmen and one engineer were carried to Prince Albert, one farm hand to North Battleford and one electrician to Yorkton. The Regina office was instrumental in transferring one town housekeeper to Swift Current, one farm domestic to North Battleford, one bushman to Yorkton and 2 teachers within the Regina zone. Travelling from Yorkton 11 bushmen, and from Prince Albert 6 bushmen were

bound for employment within their respective zones. Reduced rate vouchers were granted in Alberta during November to 115 persons, all going to points within the province. From Edmonton one farm hand each went to the Drumheller and Calgary zones and 72 bush workers, 15 fishermen, 4 mine workers, 3 farm hands, 2 farm housekeepers, one edgerman, 2 hotel waitresses, one laundry man, one baker's helper and one town housekeeper to various centres within the Edmonton zone. On certificates received at the Calgary office 9 mine teamsters were transported to Drumheller and one miner and one farm hand to Edmonton. Workers benefiting by the Employment Service reduced rate in British Columbia during November were 5 in number, these going to provincial situations. Proceeding from Vancouver one bushman and one engineer went to Kamloops, one hotel maid to Prince Rupert and one housekeeper within the Vancouver zone. The Prince Rupert office assisted in the despatch of one bushman to a point within its own zone.

Of the 750 persons who travelled at the Employment Service reduced transportation rate during November, 311 were conveyed by the Canadian National Railways, 435 by the Canadian Pacific Railway, 3 by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada during November, 1935

The aggregate value of the construction represented by the building permits issued by 58 cities during November was \$3,315,001. This was a seasonal decline of \$705,307 or 17.5 per cent as compared with the October total of \$4,020,308, but an increase of \$692,467, or 26.4 per cent in the more significant comparison with the November, 1934, figure of \$2,622,534.

The value of the building authorized in each month of the present year has been higher than in the same month of 1934, while since January, the aggregate for each month has also exceeded that for the corresponding month in 1933. The cumulative total for the first eleven months of 1935 is higher than in any of the last three years, standing at \$43,846,688, as compared with \$24,935,704 in the months January-November, 1934, \$19,793,204 in 1933 and \$40,750,142 in 1932. Although the improvement indicated in the present year is partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations has also been distinctly more

favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during the elapsed months of 1935, at 82.1 per cent of the 1926 basic average, was lower than in the same period of any preceding year for which building statistics for the 58 cities are on record, with the exception of 1932 and 1933, while it was the same as in 1931.

Some 50 cities furnished detailed statistics, showing that they had issued over 260 permits for dwellings estimated to cost more than \$1,434,000, and about 1,060 permits for other buildings estimated at almost \$1,640,000. In addition, authority was granted for engineering projects valued at \$13,500. During October, permits were issued for the erection of about 400 dwellings and 1,500 other buildings, estimated to cost approximately \$1,200,000 and \$2,500,000, respectively, while engineering projects valued at \$33,244 were also authorized.

New Brunswick, Ontario and Saskatchewan reported increases in the value of the building

authorized as compared with October, 1935, that of \$187,588, or 8.9 per cent in Ontario being greatest. Of the reductions indicated in the remaining provinces, that of \$738,124, or 58.7 per cent in Quebec was the largest.

As compared with November, 1934, Nova Scotia, Quebec, Ontario, Manitoba and British Columbia reported increases, of which the greatest was that of \$598,340 or 35.0 per cent in Ontario. The declines in the other provinces were comparatively small.

Of the four largest centres, Toronto recorded an increase in the value of the building authorized in November as compared with the preceding month, and also with November of last year, while in Montreal, Winnipeg and Vancouver, the aggregate value was higher than in November, 1934, but lower than in October of this year. Of the other centres, New Glasgow, Sydney, Moncton, Guelph, Hamilton, Kitchener, London, Owen Sound, St. Catharines, York and East York Townships, Saskatoon, Medicine Hat, Nanaimo and Prince Rupert reported greater building authorizations than in either comparison.

*Cumulative Record for First Eleven Months, 1920-1935.*—The following table shows the value of the building authorized by 58 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of build-

ing materials in these years are also given (average 1926=100).

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued in first eleven months (1926=100)	Average indexes of wholesale prices of building materials in first eleven months (Average 1926=100)
1935.....	\$ 3,315,001	\$43,846,688	30.3	82.1
1934.....	2,622,534	24,935,704	17.2	82.7
1933.....	1,624,138	19,793,204	13.7	75.1
1932.....	2,553,373	40,750,142	28.1	77.4
1931.....	7,282,117	104,327,739	72.0	82.1
1930.....	11,821,292	150,939,044	104.2	91.4
1929.....	16,171,400	220,255,867	152.0	99.1
1928.....	15,830,836	203,010,555	140.1	96.9
1927.....	12,557,622	172,858,176	119.3	96.2
1926.....	9,975,451	144,877,789	100.0	100.1
1925.....	7,988,765	117,665,590	81.2	102.9
1924.....	10,212,908	120,119,829	82.9	107.1
1923.....	8,228,206	126,547,365	87.3	111.8
1922.....	11,182,030	138,698,005	95.7	108.6
1921.....	12,192,414	111,257,084	76.8	123.9
1920.....	5,627,949	112,175,268	77.4	144.3

The aggregate for the first eleven months of this year was higher by 75.8 p.c. than in 1934; it was also considerably higher than in 1933, and rather higher than in 1932. With these exceptions, the total was lower than in any other year of the record. The average index number of wholesale prices of building materials was fractionally lower in the months January to November of 1935 than in the same period of 1934, and was also lower than in any year from 1920 to 1930, while the average for 1931 was the same.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, December, 1935, summarized the employment situation as follows:—

There was little change, on the whole, in the state of employment in November.

Employment continued to improve in coal mining, the cotton and linen industries, iron and steel manufacture, engineering, shipbuilding and ship-repairing, and dock and harbour service. On the other hand there was a further decline in employment in building and public works contracting, shipping service, and hotel, boarding house, etc., service; there was also some decline in tailoring, dressmaking, the hat and cap industry, pottery manufacture, the motor vehicle, cycle, etc., industry, and electrical apparatus manufacture.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great

Britain and Northern Ireland, the percentage unemployed at November 25, 1935 (including those temporarily stopped as well as those wholly unemployed), was 14.6, the same as at October 21, 1935, as compared with 16.3 at November 26, 1934. The percentage wholly unemployed at November 25, 1935, was 12.9, as compared with 12.7 at October 21, 1935; while the percentage temporarily stopped was 1.7, as compared with 1.9. For males alone the percentage at November 25, 1935, was 16.6 and for females, 9.3; the corresponding percentages at October 21, 1935, were 16.6 and 9.0.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at November 25, 1935, was 10,537,000. This was 45,000 more than at October 21, 1935, and 315,000 more than at November 26, 1934. The increase since October 21 was due largely

to a substantial reduction in the numbers of workpeople directly involved in industrial disputes, who are excluded from the figures relating to the estimated numbers in employment.

At November 25, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,617,237 wholly unemployed, 221,443 temporarily stopped, and 79,882 normally in casual employment, making a total of 1,918,562. This was 2,172 more than a month before, but 202,223 less than a year before. The total included 1,524,276 men, 59,019 boys, 283,935 women, and 51,332 girls.

The persons on the Registers included 851,694 persons with claims for insurance benefit; 732,338 insured persons with applications for unemployment allowances; 204,150 insured persons (including 22,706 insured juveniles under 16 years of age) not in receipt of insurance benefit or unemployment allowances, and 130,380 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at November 25, 1935, was 1,982,713.

### United States

*Manufacturing Industries.*—Factory employment decreased 0.5 per cent from October to November and payrolls decreased 0.7 per cent. The preliminary November employment index (84.8) stands 10.3 per cent above the level of November, 1934 (76.9). The November payroll index (74.5) shows a gain of 25.2 per cent compared with the index of November, 1934 (59.5). These gains indicate a return of 665,000 wage earners to employment over the year interval and a gain of \$30,500,000 in the amount paid out in weekly wage disbursements in November, 1935, compared with November, 1934.

Employment in the durable goods group increased 1.5 per cent continuing the gains which have been recorded in each of the preceding three months. The group of non-durable goods industries showed a decline in number of workers of 2.0 per cent, due primarily to expected seasonal recessions in canning, men's and women's clothing, boots and shoes, beverages, ice cream, cottonseed-oil-cake-meal, and other industries.

The most significant increase in employment from October to November was the gain of 9.3 per cent in the automobile industry. Pay rolls in this industry rose 18.8 per cent between October and November. Normally, employment in the automobile industry declines in November. The general introduction of new models at an earlier date

than in previous years, however, advanced the usual periods of expansion in this industry by approximately two months. Increased activity in the electric and steam railroad car building and the locomotive industries in November was indicated by the gains in employment of 14.9 per cent and 7.3 per cent, respectively. Gains ranging from 4.0 per cent to 6.2 per cent were shown in slaughtering and meat packing, wirework, woollen and worsted goods, shipbuilding, cotton small wares, men's furnishings, and agricultural implements. Among the remaining 40 industries in which smaller percentage gains in employment were shown over the month interval were: blast furnaces-steel works-rolling mills, foundries and machine shops, hardware, steam railroad repair shops, iron and steel forgings, tools, textile machinery, brass-bronze-copper products, stamped ware, smelting and refining, cotton goods, dyeing and finishing textiles, leather, book and job printing, and rubber goods, other than tires and shoes.

The largest declines in employment from October to November were seasonal. Employment in the canning and preserving industry decreased 39.5 per cent over the month interval. Declines were also reported in: millinery (17.0 per cent), women's clothing (7.4 per cent), men's clothing (6.2 per cent), silk and rayon (6.5 per cent), boots and shoes (7.3 per cent), ice cream (6.4 per cent), beverages (6.1 per cent), cement (6.2 per cent), jewellery (5.6 per cent), tin cans and other tinware (5.2 per cent), fertilizers (5.6 per cent), cottonseed oil-cake-meal (8.6 per cent).

The indexes of factory employment and payrolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In November, 1935, reports were received from 23,446 establishments employing 4,015,746 workers whose weekly earnings were \$87,219,694. The employment reports received from these co-operating establishments cover more than 55 per cent of the total wage earners in all manufacturing industries of the country and more than 65 per cent of the wage earners in the 90 industries included in the Bureau of Labor Statistics' monthly survey.

*Non-Manufacturing Industries.*—Among the gains in employment and payrolls reported in the non-manufacturing industries surveyed, the seasonal increases in the general merchandising group of retail trade establishments were outstanding. Reports received

from 3,317 establishments in this group indicated the additional employment of approximately 26,000 persons in department-variety-general merchandising stores and mail order houses. In addition to this substantial seasonal gain, increases in employment were also reported in other lines of retail trade, among which were furniture and house-furnishing goods and automotive products. Losses were reported over the month interval in wearing apparel and lumber and building material. The net gain in employment in all retail trade establishments combined, based on reports covering nearly 850,000 workers, was 0.6 per cent, or 20,000 workers.

Wholesale trade establishments reported an increase in employment of 0.9 per cent, indicating a gain of 11,200 workers over the month interval.

Approximately 8,700 workers were returned to employment in bituminous coal mines. Payrolls in this industry, however, declined, the decrease being due partially to the observance of the Armistice Day holiday. Small gains in number of workers were also registered in the power and light and the metalliferous mining industries and in brokerage offices.

The sharp decline of 20.7 per cent in employment in the anthracite mining industry represents a decrease of approximately 17,500 workers. This decrease was attributed largely to market conditions. Seasonal recessions in employment were reported in quarrying and non-metallic mining (6.5 per cent), dyeing and cleaning (5.1 per cent), and private building construction (7.2 per cent). With the exception of the decrease in employment 2.2 per cent in the crude petroleum producing industry, the decreases in each of the remaining industries were 0.8 per cent or less.

*Public Employment.*—A gain of more than 600,000 in the number of workers employed at the site of construction projects financed from the Emergency Relief Act of 1935 featured public employment during November. This brings the total employed on this program during the month ending November 15 to more than 1,230,000. Monthly payrolls totalled more than \$50,000,000. Purchase orders were placed for construction materials valued at over \$25,500,000 for use on this program during the month.

There was a decrease of nearly 40,000 in the number of workers employed at the site of P.W.A. construction projects during November. As of November 15, there were approximately 280,000 people working on these construction projects. Monthly payrolls amounted to approximately \$17,000,000.

The value of materials purchased for use on P.W.A. construction projects during November exceeded \$30,000,000.

Emergency Conservation Work (CCC Camps) gave employment during November to 544,000 men. Of this total, 480,000 were enrolled workers. The remainder is made up of reserve officers, camp educational advisers, and supervisory and technical employees. Monthly payrolls for November amounted to \$24,000,000.

There were more than 65,000 people working on construction projects financed from appropriations made by the Congress direct to the Federal departments. This is an increase of approximately 5,000 compared with October. These employees were paid more than \$4,000,000 for their month's work.

During November there were 171,000 men employed in the construction and maintenance of State roads. This compares with 188,000 during the previous month. November payrolls amounted to \$7,200,000.

*Building Construction.*—Seasonal declines in employment and payrolls were shown in the private building construction industry in November. Based on reports received from 9,779 contractors employing 84,944 workers in November, 1935, there was a decrease of 7.2 per cent in employment over the month interval and a decrease of 11.3 per cent in payrolls. The figures relate to employees engaged in the erection, alteration, and repairing of private buildings and do not include projects financed by the Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of the Federal, State and local governments, or by loans insured by the Federal Housing Administration.

The 17 non-manufacturing industries surveyed, with indexes of employment and payrolls for November, 1935, where available, and percentage changes from October, 1935, and November, 1934, are shown below. The 12-month average for 1929 is used as the index base, or 100, in computing the index numbers of the non-manufacturing industries. Information for earlier years is not available from the Bureau's records.

A conference has recently been called by the B.C. Loggers' Association, of leading officials in Vancouver to consider methods of accident prevention in British Columbia's logging camps. Nearly one hundred camp officials, representing all the leading logging companies of the coast will attend the conference and meet members of the Workmen's Compensation Board.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the *LABOUR GAZETTE* for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable hours. These "A" conditions, in so far as

wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE* of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Installation of boiler house equipment in the Filling Group at the Dominion Arsenal, Valcartier, P.Q. Name of contractors, The Garth Company, Montreal, P.Q. Date of contract, December 11, 1935. Amount of contract, \$15,798. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Riggers (Millwrights).....	\$0 60	8
Bricklayers (Boiler Setters).....	0 80	8
Steam Fitters.....	0 65	8
Stokers mechanics.....	0 65	8
Oil Burner Mechanics.....	0 65	8
Labourers.....	0 40	8
Cement Workers.....	0 55	8

Plasterers.....	0 70	8
Plasterers, helpers.....	0 35	8
Painters and glaziers.....	0 50	8
Plumbers and steamfitters.....	0 55	8
Electricians.....	0 55	8
Labourers.....	0 30	8
Teamster.....	0 30	8
Teamster, one horse and cart.....	0 45	8
Teamster, two horses and wagon.....	0 55	8
Motor truck driver.....	0 35	8
Motor truck driver and truck.....	1 35	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers is less than 48 per week, such lesser hours shall not be exceeded on this work.

Reconstruction of a wharf at Baie des Roches, Charlevoix Co., P.Q. Name of contractor, Mr. Hector Bouchard, LaMalbaie, P.Q. Date of contract, December 14, 1935. Amount of contract, approximately \$3,752. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 45	8
Compressor operators.....	0 40	8
Drill runners.....	0 40	8
Labourers.....	0 30	8
Motor truck drivers.....	0 35	8
Powdermen.....	0 40	8
Quarrymen.....	0 35	8
Teamsters, team and wagon.....	0 55	8
Teamster.....	0 30	8
Timbermen or cribmen (using interchangeably such tools as broad-axe, X-cut saw, hammer, auger, adze).....	0 37½	8

Repairing Woodward's training wall, Fraser River, near Steveston, B.C. Name of contractors, Gilley Bros., Ltd., New Westminster, B.C. Date of contract, December 10, 1935.

Amount of contract, approximately \$16,665. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman .....	\$1 12½	8
Pile driver engineer .....	1 00	8
Pile driver man .....	0 90	8
Pile driver boomman .....	0 90	8
Bridgeman .....	0 90	8
Derrick scow engineer .....	1 00	8
Derrickman .....	0 90	8
Fireman .....	0 65	8
Labourers .....	0 45	8
Motor truck driver and truck .....	1 50	8
Motor truck driver .....	0 50	8
Teamster, team and wagon .....	1 00	8
Teamster .....	0 45	8

N.B.—Where, by agreement or current practice, the working hours of any class of labour are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of an extension to the wharf at St. Juste du Lac, Temiscouata Co., P.Q. Name of contractors, Dumont & Damours, Enrg., Riviere du Loup, P.Q. Date of contract, December 16, 1935. Amount of contract, \$6,324. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths .....	\$0 45	8
Compressor operators .....	0 40	8
Drill runners .....	0 40	8
Driver, horse and cart .....	0 45	8
Driver, team and wagon .....	0 55	8
Drivers .....	0 30	8
Motor truck drivers .....	0 35	8
Labourers .....	0 30	8
Powdermen .....	0 40	8
Timbermen or cribmen (using such tools as broad-axe, auger, X-cut saw, hammer, adze) .....	0 37½	8

Construction of a breakwater at Roberval, P.Q. Name of contractor, Mr. Armand Levesque, Roberval, P.Q. Date of contract, October 21, 1935. Amount of contract, approximately \$36,108. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths .....	\$0 50	8
Compressor operators .....	0 45	8
Drill runners .....	0 45	8
Fireman—stationary .....	0 45	8
Hoist operator—steam .....	0 55	8
Labourers .....	0 35	8
Motor truck driver and truck .....	1 40	8
Motor truck driver .....	0 40	8
Powdermen .....	0 45	8
Driver, horse and cart .....	0 45	8
Driver, team and wagon .....	0 60	8
Drivers .....	0 35	8
Timbermen or cribmen (using such tools interchangeably as broad-axe, X-cut saw, hammer, auger, adze) .....	0 40	8

Construction of wharf repairs at Riviere au Renard, Gaspe Co., P.Q. Name of contractors, Wm. D. Buckley and Alfred J. Urquhart. Barachois West, P.Q. Date of contract, October 26, 1935. Amount of contract, approximately \$5,781.80. A fair wages schedule was inserted in the contract as follows:

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Machinist .....	\$0 55	8
Blacksmith .....	0 45	8
Carpenters and joiners .....	0 50	8
Timbermen or cribmen (using interchangeably such tools as: broad-axe, hammer, X-cut saw, auger, adze) .....	0 37½	8
Driver, team and wagon .....	0 55	8
Driver, horse and cart .....	0 45	8
Drivers .....	0 30	8
Motor truck drivers .....	0 35	8
Drill runners .....	0 40	8
Boatmen .....	0 30	8
Fireman .....	0 35	8
Hoist operator—gas. or electric .....	0 45	8
Compressor operator .....	0 40	8
Labourers .....	0 30	8

Construction of a breakwawtwer at Dune du Sud, Magdalen Islands, P.Q. Name of contractor, Mr. Alfred G. Maloney, Barachois, P.Q. Date of contract, October 28, 1935. Amount of contract, approximately \$6,276.06. A fair wage schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Machinist .....	\$0 55	8
Blacksmith .....	0 45	8
Carpenters and Joiners .....	0 50	8
Timbermen or cribmen (using such tools interchangeably as: broad-axe, X-cut saw, hammer, auger, adze) .....	0 37½	8
Driver, horse and cart .....	0 45	8
Driver, team and wagon .....	0 55	8
Drivers .....	0 30	8
Motor truck drivers .....	0 35	8
Drill runners—machine .....	0 40	8
Boatmen .....	0 30	8
Firemen—stationary .....	0 35	8
Hoist operators—gas. or electric .....	0 45	8

Scarlet serge tunics.....	The Workman Uniform Co., Ltd., Montreal, P.Q.
Pea jackets.....	The Workman Uniform Co., Ltd., Montreal, P.Q.

The LABOUR GAZETTE of August (page 713) contained a reference to the first bulletin issued by the Industrial Law Research Council of the Worker's Educational Association of Ontario. Continuing the series, the Council has now issued bulletin No. 2 entitled "The British North American Act and Labour Legislation." The Council has also issued a supplementary bulletin No. 2 entitled "Limitation of Hours of Work Act, 1935."

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Transportation and Public Utilities—Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP AND STEVEDORING COMPANIES (THE STEAMSHIP COMMITTEE) AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 269.

Agreement to be in effect from December 16, 1935, until November 30, 1936, and thereafter from year to year until either party gives notice of termination thirty days before November 30 of any year.

Gang foreman to hire the men working in his gang or gangs, although the foreman stevedore may also pick up a gang.

When a gang is hired, no union member shall be replaced during the day the gang is employed. When non-union men are employed on account of shortage of union labour, they shall not be replaced by union men during the day on which they are hired.

Hours between 8 a.m. and 6 p.m. considered day hours, from 6 p.m. to 8 a.m., night hours.

For work between 6 p.m. and midnight on Saturday, time and one-half. No work after 6 p.m. on Saturday except in case of necessity. For work on Sundays and six specified holidays, double pay, except on ships with cargo on fire when minimum rate will be \$2.10 per hour for day work and \$2.40 for night work. Double time for work during meal hours and thereafter until relieved.

Minimum wages per hour: 70 cents for day work and 80 cents for night work (increases of 2 and 3 cents per hour respectively over last year's rates). For slag or fertilizer in full cargoes or when a ship has more than 100 tons in any one hold, 10 cents per hour extra. For work in the refrigerating plant of a ship when the temperature is 26° Fahrenheit or lower, 10 cents per hour extra. For work on ships with cargoes on fire, in those hatches affected by fire, smoke, steam or gas, \$1.40 per hour for day work and \$1.60 for night work.

From 7 a.m. to midnight, waiting time to be paid at full rate for the first hour of each period of waiting and half rate for succeeding hours until midnight; after midnight, full rate to be paid. When men are ordered to work in gangs, they shall receive at least two hours pay whether they start work or not unless weather conditions are unfavourable.

No men shall remain in the holds of ships while grain is running.

Other working conditions including the number of men to be employed for work on various cargoes, etc., are provided for.

Provision is made for the settlement of disputes through grievances being referred by the union to the Company or the Steamship Committee, and if it cannot be settled in this way, by reference to a joint committee whose decision will be binding.

### Transportation and Public Utilities—Local Transportation

TORONTO, ONTARIO.—ONE DAIRY COMPANY AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, MILK DRIVERS AND DAIRY EMPLOYEES, LOCAL No. 647.

Agreement to be in effect from October 6, 1935, to October 6, 1936, and thereafter until changed by agreement.

All employees of the company are included in the agreement, except superintendents and office workers.

Union members to be employed; if none available, others employed to join the union. At each delivery branch and pasteurizing plant, one of the employees to be a shop steward who shall report any violations of agreement to the business agent of the union.

Six days to constitute a week's work for all employees except in case of emergency. Mechanics, garage men, wagon washers, car washers, stablemen, factory employees, 8 hours per day, a 48 hour week.

Wages: retail drivers to receive a minimum of \$27 per week on a load of a certain minimum, (but in no case less than \$25), increasing with the load up to \$35.50 per week; butter commission one cent per pound. All other miscellaneous products at 10 per cent commission. Wholesale drivers (stores) to be paid a 7 per cent commission on a load over a certain minimum. Senior inspector \$38 per week, route runner \$35, special delivery \$24, wholesale drivers (restaurants, etc.) \$24 and a one per cent commission on total sales, haulers between branches \$30, stablemen \$24, stablemen (temporary) \$20.

Minimum wages per week for factory workers from \$24 to \$29, foreman \$30 to \$40, temporary factory help \$20 per week. Temporary sales staff \$25 per week, except drivers while learning to be paid \$20 per week.

Seniority to be considered in choice of routes and in making promotions.

Half the cost of uniforms to be paid by the company. For factory or garage employees, overalls, smocks, aprons, etc., to be supplied by the company.

Provision is made for the settlement of disputes.

### Quebec Collective Labour Agreements Extension Act

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are

summarized in the article beginning on this page.

Barbers, Valleyfield.  
 Building Trades, Lake St. John District.  
 Bakers, Three Rivers (Amendment).  
 Shoe Workers, Province of Quebec (Amendment).  
 Painters, Quebec (Amendment).  
 Plumbers and Electricians, Quebec (Amendment).  
 Ornamental Iron and Bronze Workers, Quebec (Amendment).  
 Building Trades, Drummondville (Amendment).  
 Barbers and Hairdressers, Montreal (Amendment).

Barbers and Hairdressers, Quebec (Amendment).  
 Bakers, Montreal (Amendment).  
 Glove Makers, Province of Quebec (Amendment).  
 Longshoremen (Inland Navigation) Montreal (Amendment).

### Industrial Standards Act of Ontario

The following schedules have been made binding by Order in Council and the terms summarized in this issue in the article beginning on page 90.

Carpenters, Brantford.  
 Plumbers, Windsor.  
 Plumbers, Ottawa (Correction).

## COLLECTIVE LABOUR AGREEMENT EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and in the same district, by Orders in Council, of two agreements which are summarized below and amendments to ten other Orders in Council also noted below. An Order in Council was published in the *Quebec Official Gazette* December 7 correcting the Order governing the furniture industry (LABOUR GAZETTE November, page 1064 and December, page 1157), and a further correction to this same original Order was published in the *Quebec Official Gazette* December 28; both of these were changes in wording and do not affect the summary which was made for the LABOUR GAZETTE. Notices of application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette* as follows: men's, boys and girls' clothing workers throughout the Province in the issue of December 7, barbers at St. Hyacinthe and Drummondville in the issue of December 28. A notice of application for the extension of an agreement affecting sheet metal workers throughout the Province appeared in the issue of December 7, with a correction in the issue of December 14.

The text of the Collective Labour Agreement Extension Act, Quebec, was printed in the LABOUR GAZETTE, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, em-

ployers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the LABOUR GAZETTE beginning in the issue of June, 1934. Beginning with the issue of the LABOUR GAZETTE for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**BARBERS, SALABERRY DE VALLEYFIELD.**—An Order in Council, approved December 5 and published in the *Quebec Official Gazette* December 7, makes obligatory the terms of an agreement between Le Syndicat des Barbiers et Coiffeurs de Salaberry de Valleyfield, Section des Maîtres-Barbiers (The Union of Barbers and Hairdressers of Salaberry de Valleyfield, Master Barbers' Section) and Le Syndicat des Barbiers et Coiffeurs de Salaberry de Valleyfield Section des Employés-Barbiers (The Union of Barbers and Hairdressers of Salaberry de Valleyfield, Employed Barbers' Section).

The territorial jurisdiction includes the town of Salaberry de Valleyfield and within a radius of five miles of its limits. Ladies hairdressing parlours are not governed by this agreement except for the minimum rate for women's haircut or any other service which may be performed in either a barber shop or in a ladies' hairdressing parlour.

The agreement is in effect from December 7, 1935, until December 6, 1937, and until a new agreement is made. With the consent of both parties the Joint Committee may make any modification it may consider in the interest of the trade.

Hours: 64 per week.

Minimum wage rates for barbers and men's hairdressers: \$15 per week plus 50 per cent of all receipts in excess of \$25 taken in by the employee in the course of the week. Extra employees 35 cents per hour. For work by the job, minimum rates are set for each piece of work and these must be paid to either male or female barbers and hairdressers and no object of any value may be given a customer which would thereby lower the price of any service. No employer may reduce the wages of any employee receiving more than these minimum rates at the time of the signing of the agreement.

Journymen who due to advanced age or infirmity are unable to give the service of a competent worker may have their case referred to the Joint Committee who may revise the wage scale for each such case.

Not more than one apprentice allowed in each shop. Apprenticeship includes a six months' special course in hygiene.

Wages of apprentices: after six months in a barber school \$6 per week, after one year's practice in a barber shop or beauty parlour \$9, after 18 months \$12.

**BUILDING TRADES, LAKE ST. JOHN DISTRICT.**—An Order in Council, approved November 29 and published in the *Quebec Official Gazette* December 7, makes obligatory the terms of an agreement between certain contractors of the region of Lake St. John and Le Conseil des Métiers de la Construction des Syndicats Catholiques Nationaux du district de Chicoutimi (The Building Trades Council of National Catholic Unions of the district of Chicoutimi) and Le Conseil de Construction des Syndicats Catholiques Nationaux de Jonquière (The Building Trades Council of National Catholic Unions of Jonquière).

The territorial jurisdiction comprises the counties of Chicoutimi, Lake Saint John and Charlevoix.

The agreement is in effect from December 7, 1935, to December 6, 1936, and thereafter from year to year until either party gives notice of change 30 days before the expiration date.

Hours: in accordance with the Order in Council under the limiting of working hours Act, hours to be 8 per day, 40 per week except for work for the provincial government, municipalities, school corporations or parish trustees, or work at least half the cost of which is paid or guaranteed by the provincial or municipal governments, on which work a two shift system is to be established of two shifts of 6 hours each per day, 6 days per week, making a 36 hour week for the workers. It is however provided in this agreement that where the double shift system is in force, the hours to be arranged according to the needs of the work but not to exceed 8 hours per day.

Overtime: time and one quarter. Work on Sundays and holidays, time and one half.

Minimum wages per hour in the municipalities of Chicoutimi, Jonquière, Kenogami, Saint Joseph d'Alma, La Rivière du Moulin, Ville Racine, Ile Maligne, River Bend, Arvida, Bagotville, Port Alfred, Grande Baie, Desbiens Mills and within a radius of two miles from their limits and also for work on contracts of \$10,000 or more in the rest of the territory covered: bricklayers, masons and plasterers 70 cents; tile setters and terrazzo layers and hoistmen 55 cents; carpenters and joiners, cement finishers, marble setters, blacksmiths, granite cutters, plumbers, steamfitters, stationary enginemen and joint finishers 50 cents; lathers (wood and metal), painters, stationary firemen, roofers (slate, tile, composition and asbestos) compressors, mixers and pump operators, 45 cents; truck chauffeurs 40 cents; common labourers and helpers 35 cents; carters (one horse), 45 cents; carters (two horses), 60 cents; drivers (one horse or two horses), 35 cents; apprentices in trades exacting an apprenticeship 15 cents during first year, 25 cents during second year and 35 cents during third year. In these same municipalities workmen permanently employed in the maintenance of public buildings or in industrial or commercial establishments, must be paid at a minimum of \$18 per week for qualified workmen and \$13 for common labourers.

Minimum wages per hour in that part of the territory not covered by the above wage scale are lower, as follows: bricklayers, masons and plasterers 15 cents lower; carpenters and joiners, cement finishers, common labourers and helpers, lathers (wood and metal) stationary firemen, blacksmiths, hoistmen, tile setters, terrazzo layers, plumbers, steamfitters, stationary enginemen, carters (two horses) and joint finishers, third year apprentices, all 10 cents lower; marble setters, roofers (slate, tile, composition and asbestos), carters (one horse) and drivers (2 horses), compressors, mixers and pump operators and truck chauffeurs, first and second year apprentices, all 5 cents per hour lower. In these municipalities, workmen permanently employed on maintenance work, must be paid at a minimum of \$15 per week for qualified workmen and \$12 for common labourers. If employer supplies room and board to maintenance men, \$2 may be deducted for room and 20 cents per meal.

One apprentice allowed to every ten journeymen in the plastering, bricklaying, masonry and carpentry trades.

If workmen are sent out of their own localities for less than a week, travelling expenses and board must be paid by the employers.

#### BAKERS AND DELIVERYMEN, THREE RIVERS.—

An Order in Council approved December 5 and published in the *Quebec Official Gazette* December 7, modifies the original Order in Council for this industry (LABOUR GAZETTE February, page 148, amendments May, page 426 and October, page 954) by prohibiting the employment either directly or indirectly of deliverymen's helpers, except that if the regular deliveryman is too old or through infirmity is unable to do the work alone, the Joint Committee may permit the employment by the master bakers directly of a helper who must be paid a minimum of \$5 per week.

SHOE WORKERS, PROVINCE OF QUEBEC.—An Order in Council, approved December 5 and published in the *Quebec Official Gazette* December 7, amends the original Order in Council for this industry (LABOUR GAZETTE September 1934, page 825, with amendment in February, 1935, page 149) by providing that in the case of manufacturing establishments where the piece work system is in force it shall be sufficient that at least 80 per cent of the employees in each class, that is classes A. B. C. and D. receive the minimum wage rate, but when minimum piece rates for specific operations are established by the Joint Committee, such minimum piece work rates shall be applicable to all employees performing such operations.

PAINTERS, QUEBEC.—An Order in Council, approved December 5 and published in the *Quebec Official Gazette* December 7, amends the original Order in Council for this trade (LABOUR GAZETTE, June, page 529) by changing the territorial jurisdiction to include the following counties only: Quebec, Levis, Portneuf, Montmorency, Beauce and Megantic.

PLUMBERS AND ELECTRICIANS, QUEBEC.—An Order in Council, approved November 29 and published in the *Quebec Official Gazette* December 7, amends the original Order in Council for these trades (LABOUR GAZETTE July, page 630, with change in August issue, page 732) by changing the territorial jurisdiction to include the following judicial districts only: Quebec, Beauce, Montmagny, Kamouraska, Saguenay, Gaspé and the County of Megantic.

ORNAMENTAL IRON AND BRONZE WORKERS, QUEBEC.—An Order in Council, approved November 29 and published in the *Quebec Offi-*

*cial Gazette* December 7, amends the original Order in Council for this industry (LABOUR GAZETTE, February, page 149) by providing that employers may employ one apprentice on each job and at each shop for the first five journeymen or less employed, and one additional apprentice for each additional five journeymen, wages for apprentices to be 12 cents per hour during first year, 18 cents during second year, 25 cents during third year, and 32 cents during fourth year. The industrial jurisdiction covered by the agreement includes all operations of the ornamental iron trade, whether performed on the job or in a workshop; it applies also to all works of fabrication, repairing of equipment, and to any work performed by the workmen during working hours.

BUILDING TRADES, DRUMMONDVILLE.—An Order in Council, approved November 29 and published in the *Quebec Official Gazette* December 7 amends the original Order in Council for these trades (LABOUR GAZETTE, July, page. 632) by providing that overtime be paid at time and one-half until midnight, and double time thereafter; double time also for any work performed on Sundays and holidays. It is also provided that employers of maintenance men may deduct \$1 per week per room if such workman lodges with employer, and not more than 25 cents per meal if the workman boards with his employer.

BARBERS AND HAIRDRESSERS, MONTREAL.—An Order in Council, approved November 29 and published in the *Quebec Official Gazette* December 7, amends the original Order in Council for this trade (LABOUR GAZETTE, July, page 630, and October, page 953) by making a slight change in the arrangement of hours and minor changes in job work prices, extra employees on Fridays and Saturdays to be paid 60 per cent of all receipts taken in by such employees. No employer may reduce the wages of an employee receiving more than the minimum rate at the time of the signing of the agreement. Employers who lodge or board an employee may not charge such employee more than \$2 per week for room, or \$4 per week for board.

BARBERS AND HAIRDRESSERS, QUEBEC.—An Order in Council, approved November 29 and published in the *Quebec Official Gazette* December 7, amends the original Order in Council for this trade (LABOUR GAZETTE, July, page 631, with amendment in December issue, page 1157) by the addition of certain other employers in Thetford Mines and Riviere du Loup, and by the extension of the territorial jurisdiction to include the town of Thetford Mines and within a radius of ten miles of its limits,

and the town of Rivière du Loup and within a radius of four miles of its limits.

For the town of Rivière du Loup and within a radius of ten miles of its limits, the minimum wage for journeymen is \$10 per week plus a commission of 50 per cent on the net receipts over \$20 per week for each journeyman.

For job work, a schedule of minimum rates is set for each piece of work in each of these two towns.

**BAKERS, MONTREAL.**—An Order in Council, approved December 20 and published in the *Quebec Official Gazette* December 28, amends the original Order in Council for this industry (*LABOUR GAZETTE*, August, page 731, with amendment in October issue, page 953), by limiting the territorial jurisdiction to the Island of Montreal and Ile Jésus. The Order in Council also governs bakers outside this territory who sell all or part of their production within the limits of this territory.

**GLOVE MAKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved December 20, and published in the *Quebec Official Gazette* December 28, amends the original Order in Council for this industry (*LABOUR GAZETTE*, May, page 421, with amendment in November issue, page 1065) by minor changes in the arrangement of operations in the piece work schedule.

**LONGSHOREMEN (INLAND NAVIGATION WORK) MONTREAL.**—An Order in Council, approved December 20, and published in the *Quebec Official Gazette* December 28, amends the original Order in Council for this work (*LABOUR GAZETTE* July, page 632, with amendment in August issue, page 733) by providing that the agreement be renewed automatically for the whole of any succeeding season of navigation unless one or the other contracting party gives notice of termination on or before February 1 of such year.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreements Recently Approved by Orders in Council

**THE** Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July issue of the *LABOUR GAZETTE*,

summaries are given in this article of the schedules which have thus been approved.

**PLUMBERS, WINDSOR.**—An Order in Council dated December 4 and published in *The Ontario Gazette* December 7 makes obligatory the terms of a schedule on all those engaged in the plumbing, steamfitting, hot water heating, gasfitting industry, and in the installation of pipe work and fittings but not including sprinkler fitting, in a zone which includes the city of Windsor and the surrounding district which is defined in the Order in Council.

The schedule is in effect from December 17, 1935, to November 18, 1936.

Hours: 8 per day, 5 days per week, a 40 hour week. In finishing up a repair job on regular working days, if to finish will not take more than one hour's time, it shall be done at the regular rate of wages. For night work or shift work after the time of the regular working day, 8 hours' pay for 7 hours' work.

Overtime: time and one-half; Saturdays, Sundays and holidays, double time, except emergency work; the setting of sleeves and inserts on Saturday morning, for which the Board may permit single time to be paid.

Minimum wages for journeymen \$1 per hour, for fifth year junior journeymen 65 cents. All work contracted for and accepted prior to November 18, 1935, of which due notice has been given to the Board on or before December 21, may be completed at a rate approved by the Board. The Board may set a lower wage rate for aged or handicapped workers.

One junior mechanic allowed on any job to each branch of the trade except when

there are more than five journeymen plumbers or five journeymen steamfitters employed when two junior mechanics allowed to six journeymen, three to eleven and four to sixteen journeymen.

All apprentices to be employed in accordance with the Ontario Apprenticeship Act.

**PLUMBERS, OTTAWA.**—In the October issue of the *LABOUR GAZETTE*, page 956, the statement was made, taken from *The Ontario Gazette* September 14, that the wage rate for journeymen was 75 cents and for junior mechanics 55 cents until December 1, 1935, and 80 cents for journeymen and 60 cents for junior mechanics thereafter. A copy of this schedule received from the Ontario Department of Labour shows that the correct date should have been December 31, and not December 1.

**CARPENTERS, BRANTFORD.**—An Order in Council dated December 4, and published in *The Ontario Gazette* December 7 makes obligatory

the terms of a schedule on all those engaged in the carpentry industry on building and construction work in the City of Brantford and the Township of Brantford with the exception of the town of Paris.

The schedule is in effect from December 17, 1935, to May 1, 1936.

Hours: 8 per day, 4 on Saturdays, a 44 hour week for regular hours; shift work 8 hours, 5 days, a 40 hour week.

Overtime from 5 p.m. to 10 p.m. on other days and from noon to 5 p.m. on Saturdays, time and one half; overtime after 10 p.m. on first five days of the week, double time; no overtime after 5 p.m. on Saturdays. Work on Sundays and holidays, time and one half.

Minimum wages for carpenters and joiners: 70 cents per hour. All work contracted for and accepted prior to November 25, 1935, of which due notice has been given to the Board on or before December 31, shall be completed at a rate set by the Board. A rate of wages may be set for aged or handicapped workers by the Board appointed for this agreement.

Apprentices to be governed by the Ontario Apprenticeship Act.

### Railway Accidents in Canada in 1934

The Board of Railway Commissioners for Canada has recently issued its thirtieth report covering the calendar year 1934. In a section dealing with accidents, it is shown that accidents to the number of 2,291 (resulting in 282 persons, being killed and 2,317 injured) were reported to the Board during the year, as compared with a total of 1,991 accidents in 1933, resulting in 256 fatalities and 2,037 persons injured. Five passengers were killed during the year 1933 and four during 1934. The number of passengers injured was 244 as compared with 284 in 1934.

In 1933 there were 44 employees killed and 1,272 injured as compared with 51 employees killed and 1,542 injured in 1934.

The report draws attention to the total accidents at highway crossings in the past four years. During that period there were 1,353 such accidents, resulting in 466 people killed and 1,769 injured.

At crossings protected by gates there were 21 persons killed and 72 injured; at bell-protected crossings there were 69 killed and 175 injured; at lightning flash signal crossings there were 10 killed and 9 injured; at crossings protected by watchmen there were 12 killed and 20 injured. Crossings unprotected accounted for 354 killed and 1,493 injured.

There have been 249 accidents at protected crossings (112 persons killed and 276 injured), and at unprotected crossings there have been 1,104 accidents (354 persons killed and 1,493 injured).

During the year 1934 there were 211 highway crossing accidents investigated, of which 49 occurred at protected crossings, leaving unprotected crossings to account for 162 accidents.

The fifth annual report of the Department of Labour and Industry, Queensland, Australia, for the year ended June 30, 1935, has recently been published. According to this report, the relative percentage of unemployment in the States of the Commonwealth of Australia are as follows: Queensland, 8.5; New South Wales, 19.1; Victoria, 14.8; South Australia, 16.3; Western Australia, 12.5; Tasmania, 16.7.

The *Alberta Gazette* of December 14, 1935, announces the establishment of a Bureau of Relief and Public Welfare. This body is headed by a commissioner who administers its activities relating to the collection, assortment, systemization and publication of information and statistics affecting relief and public welfare, as may be directed by the Minister.

Speaking on January 2, at the opening of the first Pan-American Congress of member nations of the International Labour Office at Geneva, Dr. Walter A. Riddell of Canada, chairman of the International Labour Office at Geneva, praised the social work of the new world and said 60 per cent of international working agreements had been ratified by Pan-American countries.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1935

### Cost of Living, Prices of Staple Articles and Index Numbers

THE weekly family budget in terms of retail prices continued to somewhat higher levels, due mainly to the higher cost of foods, while there was a fractional decrease in the Dominion Bureau of Statistics' index number of wholesale prices.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$8.14 at the beginning of December, 1935, as compared with \$8.04 for November; \$7.54 for December, 1934; \$6.67 for March, 1933 (the low point in recent years); \$11.83 for December, 1929; \$11 for December, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.96 for December, 1914. The largest advances occurred during the month in the cost of potatoes, butter and eggs which more than offset declines in beef, pork, bacon, evaporated apples and prunes. Including the cost of fuel and rent with that of foods the total budget was \$16.65 at the beginning of December, 1935, as compared with \$16.54 for November; \$16.02 for December, 1934; \$15.41 for June, 1933 (the low point in recent years); \$22.11 for December, 1929; \$21.49 for December, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.26 for December, 1914. Fuel was again somewhat higher owing to increases in the cost of coal. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was again fractionally lower, being 72.6 for December, 1935, as compared with 72.7 for November. Comparative figures for certain earlier dates are 71.1 for December, 1934; 63.5 for February, 1933 (the low point in recent years); 96.0 for December, 1929; 97.9 for December, 1926; 96.4 for December, 1921; 164.3 for May, 1920 (the post war peak); and 66.4 for May, 1914.

Consumers' goods were somewhat higher and producers' goods lower, the former being due in large part to higher prices in foods, chiefly milk and its products and vegetables, and the latter due mainly to lower prices for certain manufacturers' materials, chiefly those for the meat packing industry. The Vegetable Products group and the Non-Ferrous Metals group were lower, while the Wood and Wood Products group and the Non-Metallic Minerals group advanced.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal,

wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received,, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetables is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

(Continued on page 100)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

With the exception of veal and mutton which advanced in the average, meat prices continued to somewhat lower levels in December, sirloin steak being down as compared with November from 22·7 cents per pound to 22·5 cents, fresh pork roast from 22 cents per pound to 20·8 cents, breakfast bacon from 31·2 cents per pound to 30·0 cents and boiled ham from 52·3 cents per pound to 51·8 cents.

Egg prices averaged somewhat higher at 43·5 cents per dozen in December for fresh as compared with 41·5 cents in November. Decreases were numerous in Ontario and British Columbia but there were substantial advances in other localities, chiefly in the prairie provinces. The price of butter continued to higher levels, dairy being up from an average of 24·9 cents per pound in November to 26·6 cents in December, and creamery from 28·6 cents to 30·4 cents. Bread and flour were unchanged, the former averaging 6·1 cents per pound and the latter 3·5 cents. Potatoes were higher in many localities and the Dominion average price rose, from \$1.08 per ninety pounds to \$1.21. Prices in the prairie provinces were considerably lower than elsewhere. United States anthracite coal was again higher at \$14.83 per ton in December as compared with \$14.76 in November, seasonal increases being reported from several cities. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices in the average for December did not differ widely from those of the previous month but wheat was about 5 cents per bushel higher than in December, 1934, while oats, rye and barley were substantially lower. No. 1 Manitoba northern cash wheat averaged 84·7 cents per bushel in December, 1935, 85·7 cents in November and 79·2 cents in December, 1934. Western oats averaged 29·8 cents per bushel in December, 1935, 31·9 cents in November and 44·2 cents in December, 1934. Barley was 33·8 cents per bushel in December,

\*Prior to 1926 number of commodities was 236, and commencing in January 1934, the number is 567.

1935, 33.3 cents in November and 54.9 cents in December, 1934. Quotations for live stock were generally higher. Choice steers were up at Toronto from \$5.80 per hundred pounds in November to \$6.33 in December and at Winnipeg from \$4.74 per hundred pounds to \$4.88; bacon hogs at Toronto advanced from \$7.99 per hundred pounds to \$8.40 and at Winnipeg from \$7.16 per hundred pounds to \$7.42; and lambs at Toronto from \$7.74 per hundred pounds to \$8.77. Fresh eggs at Toronto were down from 42.5 cents per dozen in November to 40.1 cents in December and at Vancouver from 37.8 cents to 30.1 cents. Prices in December, 1934, were 35.3 cents per dozen in Toronto and 24 cents in Vancouver. Cold storage holdings of creamery butter at the beginning of December were materially lower than in the previous month. Prices, however, averaged only slightly higher, being 27.8 cents per pound in Montreal as compared with 27.4 cents in November. In textiles raw cotton at New York was unchanged at 12.1 cents per pound, while raw

silk was down from \$2.25 per pound to \$2.14. In non-ferrous metals electrolytic copper at Montreal was unchanged at \$9.41 per hundred pounds in November and December, 1935, as compared with \$7.43 in December, 1934. Silver averaged 58.4 cents per ounce in December, 1935, 66.1 cents in November and 53.7 cents in December, 1934.

"Employed Women under N.R.A. Codes," is the title of a bulletin recently issued by the U.S. Department of Labour (Women's Bureau). The report contains sections dealing with: Gains of employed women under the N.R.A.; general summary of situation of employed women under the N.R.A. codes; minimum wage levels for women as provided in the codes; maximum hours of work for women under the codes; and the groups of women that could be paid wages below the usual code minimum.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1935," which is a Supplement to this issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 91·2 for November, an increase of 0·1 per cent for the month. An increase of 0·9 per cent in industrial materials and manufactures was partly offset by a decrease in the food and tobacco section which was due to a fall of 5·1 per cent in prices of cereals.

The *Statist* index number, on the base 1867-1877=100, was 86·3 at the end of November, which is the highest figure reached since February, 1932. As compared with the previous month, prices at the end of November were 0·6 per cent higher due to advances in the textiles and minerals groups, although all groups of foodstuffs and sundries showed decreases.

**COST OF LIVING.**—The index number of the Ministry of Labour on the base July, 1914=100, was 147 at the end of November. Neither in the total nor in any of the groups did any change occur for the month.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base

1913=100, was 103·1 for November, an increase of 0·3 per cent for the month. The principal increases for the month were in rubber and hides and leather. All agricultural products also showed increases.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 122·9 for November, an increase of 0·1 per cent for the month, due to small advances in food, heat and light and sundries; rent was unchanged and clothing was slightly reduced.

### United States

**WHOLESALE PRICES.**—*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the sum total of the prices per pound of 96 commodities of common consumption, was \$10·4029 at the beginning of December, an increase of 1·2 per cent for the month, which is the highest figure reached since September, 1930. The increases for the month were in the livestock, provisions, textiles, metals and oils groups.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities in wholesale markets, was \$177·732 at the beginning of December, a fall of 0·5 per cent for the month. The decreases occurred in the breadstuffs and "other food" groups, while all other groups were higher than a month previous.

**COST OF LIVING.**—The National Industrial Conference Board index number, on the base 1923=100, was 84·3 for November, an advance of 0·5 per cent for the month. All groups showed increases except the sundries group, which was unchanged.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1936, but the losses were smaller than at the same date in earlier years of the record. The firms furnishing data laid off some 52,400 workers at the date under review, or about 90 per cent of the average for the years since 1920. Returns were tabulated by the Dominion Bureau of Statistics from 9,409 employers whose payrolls aggregated 933,107, as compared with 985,481 in the preceding month. The index (average 1926=100) stood at 99.1, compared with 104.6 at December 1 and 94.4 at January 1, 1935. The indexes for the beginning of January in the preceding years of the record are as follows: 1934, 88.6; 1933, 78.5; 1932, 91.6; 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8, and 1921, 88.8. The figures are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of January, 1936, the percentage of idleness reported to the Department of Labour by local trade unions throughout Canada stood at 14.6 as compared with 13.3 per cent of inactivity at the beginning of December, 1935, and 18.0 per cent at the beginning of January, 1935. The percentage for January was based on the reports compiled from 1,807 labour organizations with a total of 170,503 members.

Reports received from the offices of the Employment Service of Canada indicated a decline from November, 1935, and also from December a year ago in the volume of business transacted during December, 1935, as shown by the average daily placements effected. This contraction was largely due to fewer placements in construction and maintenance, in which group relief work provided by the federal and provincial governments had been considerably curtailed. Placements in farming, however, showed a fair gain, which was accounted for by the placing of workers under the Farm Labour Relief Plan. Vacancies in December,

1935, numbered 29,713, applications 51,983, and placements in regular and casual employment 28,144.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent at the beginning of January, 1936, was little changed at \$16.68 as compared with \$16.65 the previous month. The cost of foods was slightly higher, while fuel and rent were practically unchanged. Comparative figures for certain earlier dates are \$15.99 for January, 1935; \$15.41 for June, 1933 (the low point in recent years); \$22.17 for January, 1930; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.49 for January, 1914. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 72.7 for the week ended January 31, 1936, as compared with 72.9 for the previous two weeks and 71.8 for the week ended February 1, 1935. On a monthly basis this index number was 72.6 in December, 1935; 71.4 in January, 1935; and 63.5 in February, 1933, the low point in recent years.

The latest information available reflecting industrial conditions in Canada is given in the table on page 104. The index of the physical volume of business in December, 1935, declined about  $3\frac{1}{2}$  per cent from the level in November but was 13 per cent higher than in December, 1934. In the former comparison mineral production was considerably higher and there was also a small increase in trade employment. Manufacturing construction, electric power output, carloadings, imports and exports were lower. All of the above factors, except construction and imports, were higher in December, 1935, than in December, 1934, the most important increases being in mineral production, the index of which advanced 32 per cent, that for manufacturing 23 per cent, and electric power output 5 per cent. Information available for January, 1936, shows employment at a lower level than in December, 1935, the decrease, however, being less than usual for the period, while there was an advance as compared with January, 1935. Contracts awarded were much higher in January both as

\*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

†For the week ended January 31.

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending February 1, 1936 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending December 31, November 30 and January 26, 1935; December 31 and December 1, 1934.

(7) MacLean's Building Review.

compared with the previous month and with January, 1935. Little change occurred in the wholesale prices index for January.

During January there were on record four disputes, involving 205 workers and causing a time loss of 1,105 man working days as compared with eight disputes, 431 workers and 3,152 days in December, 1935, and ten disputes, 4,832 workers and 26,780 days in January, 1935. None of the disputes in January, 1936, involved many workers or were of considerable duration, and in the previous month only two disputes were of importance, those involving water transport workers at Vancouver, B.C., and other ports, which commenced in June, and these terminated early in the month. In January, 1935, four of the disputes were important, those involving coal miners at Springhill, N.S., and Corbin, B.C., and cloakmakers and dressmakers at Toronto, Ont. All of the four disputes recorded in January, 1936, terminated during the month, one resulting in favour of the workers involved, one in favour of the employer affected, one being partially successful while a compromise settlement was reached in one case. At the end of the month, therefore, there were no strikes or lockouts on record. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### Measures Forecast in Speech from Throne.

Featuring the Speech from the Throne at the opening of the Dominion Parliament on February 6 were references to measures designed to facilitate economic recovery. The paragraphs from the Speech indicating the trend of such proposed action are as follows:—

"Unemployment continues to be Canada's most urgent national problem. While there is an increase in the number of persons employed, the number of those on relief shows no abatement.

"As a means of dealing with present emergency conditions, you will be asked, with the approval of the Governments of all the Provinces of Canada, to make provision for the establishment of a representative National Commission, which will co-operate with the provinces and municipalities in an endeavour to provide work for the unemployed, and in the supervision of unemployment relief. The Commission, which will be assisted by a representative advisory committee, will aim at effecting nation-wide co-operative effort toward increasing opportunities of gainful employment.

"Transfer of the camps established for the care of single homeless men from the Department of National Defence to the Department of Labour is in process of being effected. Every effort will be made to close the camps altogether at as early a date as expanding employment opportunities permit."

Among other measures forecasted in the Speech were:—

Institution of an inquiry—"With a view to safeguarding the interests of consumers"—into representations "respecting monopolistic control of the importation and distribution of anthracite coal."

Inquiry by a Royal Commission into conditions in the textile industry.

Submission of legislation arising out of the Dominion-Provincial conference including a proposal for amending the British North America Act to provide for "certain financial arrangements between the Dominion and the provinces."

Effecting "such changes in the ownership and control of the Bank of Canada as may be necessary to give the Government a predominate interest in the ownership as well as effective control of the bank."

Reorganization and consolidation of government services.

#### Classification of Relief Recipients

The Hon. Norman McL. Rogers, Minister of Labour, announced recently that a special classification of those in receipt of direct relief from public authorities throughout Canada is now proceeding under the direction of the Department of Labour. At the Dominion-Provincial Conference in December the Provincial Governments agreed that it was necessary to have more details regarding persons who are being maintained through public relief. Consequently, the provinces and their municipalities, together with any interested federal departments, have been asked to report their figures for inclusion in a general tabulation.

It is expected that the classification will result in securing statistics showing the numbers on relief in the following categories: employable heads of families; employable individual cases; employable dependents; unemployable persons; and other dependents. Information is also sought on the length of time on relief; ages; occupations; the number required to work for relief; and the number receiving partial relief. Special surveys are being made in the cases of farmers' families and transients. The tabulation will be separate for men and women, and a special effort is being made to secure data on those

young persons who have never actually become established in any employment and who are now on relief. After the first return, similar figures will be collected each month.

"This survey," the Minister stated, "will provide much information for the proposed National Commission on Employment and Relief, and will make possible a preliminary study of the whole problem of relief by that body after its establishment. At the same time the question of a re-registration of all persons on relief, a matter also considered by the Dominion-Provincial Conference, will be gone into further by the Department of Labour."

#### **Personnel of Nova Scotia Economic Council**

Among the recommendations of the Royal Commission on Economic Inquiry of Nova Scotia (LABOUR GAZETTE, January, 1935, page 29) was one unging the establishment of an Economic Council. Subsequently the recommendation was embodied in legislation by an Act providing for a Council of fifteen members to advise on matters relative to the promotion and development of industry and trade in the province.

The *Royal Gazette* of Nova Scotia has announced the appointment of the following as "members of the Nova Scotia Economic Council": A. Stanley MacKenzie, Ph.D., D.C.L., LL.D., F.R.S.C., of the city of Halifax; A. Bunpee Balcom, Ph. D., of Wolfville, in the County of Kings, Professor of Economics; Francis William Gray, of the City of Sydney, Mining Engineer; Charles G. Hawkins, of Milford, in the County of Hants, Lumber Operator; Neil McAulay, of the City of Sydney, Steel Worker; Donald F. Macdonald, LL.D., of Antigonish, in the County of Antigonish, Associate Professor of Geology; Oswald F. MacKenzie, of the City of Halifax, Fish Merchant; Frank T. Stanfield, B. Com., of Truro, in the County of Colchester, Manufacturer; and Frederick Waldo Walsh, B.S.A., of the City of Halifax, Director of Marketing for Nova Scotia. Dr. MacKenzie is chairman of the Council.

#### **Minister of Labour on "Challenge of Unemployment."**

In an address before the Kingston Chamber of Commerce on January 30, the Hon. Norman McL. Rogers, Dominion Minister of Labour, dealt with the "challenge of unemployment" and the problem presented by "the increasing pressure of relief costs on the financial resources of governments under our federal system." Emphasizing that this challenge is not only directed to

governments, the Minister of Labour declared:—

"There is no greater fallacy than the current assumption that governments can end a depression by their own efforts. No government can escape its responsibility to give prudent and courageous leadership in a period of economic crisis. But it is well to remember that governments are not made of supermen. They are made of human stuff. They are neither all-wise nor all-powerful. In a period of crisis they may be likened to the general staff of an army. It is their duty to give coherence and direction to the scattered force of economic recovery. Final victory over the depression will not be won by a pitched battle. It can only be won by a carefully planned campaign in which the leadership of government is supplemented by the co-operative effort of industry and commerce throughout the entire Dominion. I mention this at the outset because I know of nothing more likely to undermine the foundation of self government than the belief that any group of men in this or any other country can work out a magic formula to end unemployment and restore prosperity by the traditional methods of legislation and taxation. And I emphasize it also because I want you to know that while the present government at Ottawa—like any other government—is ready to meet its responsibilities and accept your judgment of its record of leadership, it is determined at the same time to ask for the active co-operation and support of organized industry and private citizens in dealing with the crucial problem of unemployment.

"What is the first requisite in an approach to the problem of unemployment and relief? I think you will agree with me that our first duty is to get at the facts of the situation however unpalatable these facts may be. If as a government we are going to seek co-operation in meeting the problem, we must take the people of Canada into our confidence and place the facts squarely before them. It is much better in the long run to summon courage to attack a position which we know to be difficult than to generate a false optimism by underestimating the magnitude of the task that lies ahead of us."

#### **Co-operative Activities of St. Francis Xavier University**

The activities of St. Francis Xavier University in promoting co-operative principles among the industrial population of Nova Scotia, as well as extending adult education along economic and social lines (through its Extension Department), have been outlined from time to time in the LABOUR GAZETTE, the latest reference

being in the issue of February, 1935, page 98.

Recently the Co-operative League of New York, N.Y., has published a bulletin entitled "How St. Francis Xavier Educates for Action." The pamphlet reviews the methods of adult education which this department of the University has adopted.

A feature of the extensions department program has been the establishment of study clubs. The number of these increased from 173 in 1931 to 940 in 1935, while the membership in the clubs increased from 1,384 in 1931 to 8,460 in 1935.

Since the Department was opened many co-operative organizations of various types have been established and are now being successfully operated. A tabular summary of these co-operative enterprises indicates that during 1935 there were 45 credit unions with a membership of 9,000; 8 co-operative stores; 10 co-operative buying clubs; 5 co-operative fish plants; 2 community industries; and 14 lobster factories. The number of communities served by this enterprise in 1935 was 60.

The bulletin contains sections entitled as follows: The Technique of Democracy (Rev. J. J. Tompkins); St. Francis Xavier University's Extension Department (Rev. Malcolm MacLellan); The Men of Antigonish (Dr. Gustav Francis Beck); A Maritime Miracle (Prof. King Gordon); Universities Fail to Help Citizenry Solve its Problems (Evelyn S. Tufts); Why and How St. Francis Xavier University Promotes Co-operatives (Dr. M. M. Coady); Accomplishments of St. Francis Xavier University Extension Department from its Inception in 1930 to 1935.

#### **Establishment of National Labour Conference**

Two central labour bodies in Canada—The All-Canadian Congress of Labour and the Confederation of Catholic Workers—have recently become the first members of an assembly to be known as the National Labour Conference. In a statement outlining the steps culminating in the establishment of the new organization, the All-Canadian Congress executive referred to the fact that during the past six years there has been frequent co-operation between the Congress and the Confederation along certain parallel lines of policy. The statement adds that in 1932 the Confederation took part, along with other organizations, in a Labour Representation Conference of National Unions called by the Congress. Since then similar conferences held from time to time have brought the two organizations more regularly in contact and they have joined in making representations to the Federal Government on matters of common interest.

At the fourth Labour Representation Conference of National Unions, held at Ottawa in December, 1935, the two central bodies decided that a more permanent medium of consultation and collaboration was desirable.

Accordingly, there was instituted the National Labour Conference, which "will continue the round-table procedure of the earlier conferences at its periodical sessions," and to which unaffiliated organizations may be invited.

"Beginning with the questions of Labour policy on which there is complete agreement, the Congress and the Federation hope that in due time they will be able, through the National Labour Conference, to combine their efforts in many directions for the advancement of the national labour movement. As the first manifestation of the new accord, three officers of the Confederation of Catholic Workers of Canada accompanied the delegation of the All-Canadian Congress of Labour which submitted legislative representations to the Government at Ottawa on January 17."

#### **Representative Character of Employment Statistics**

The Dominion Bureau of Statistics has issued a bulletin entitled "Comparison of the Geographical and the Industrial Distribution of the Workers Included in the Monthly Employment Surveys Made by the Dominion Bureau of Statistics, with the Geographical and Industrial Distribution of the Workers Enumerated in the Census of June 1, 1931." This is designed to show the extent to which the monthly reports on employment received from employers are representative of employment in the industries covered throughout Canada and in the several economic areas and in the larger cities for which separate figures are given. Compilations and analyses of these figures are published in a bulletin issued each month by the Bureau and the figures are published also in the LABOUR GAZETTE each month. The reports are secured from firms with fifteen or more employees.

The bulletin analyzes the figures for all employees in all industries secured in the Census of 1931 and makes comparisons with the numbers of employees reported on each month. The Census figures showed 2,570,097 wage-earners in Canada on June 1, 1931, of whom 2,100,139 were at work. The 7,865 firms who made returns at that time reported 940,875 employees. For industries classified under agriculture, fishing and trapping, finance, and services (professional, public administration, recreational, custom and repair, business and personal), monthly reports are not secured

from employers and the number of employees in these industries on June 1, 1931, was 877,403, of whom 787,741 were at work. Deducting these figures from those for all industries and allowing for some differences in the classification of industries and occupations used for the Census, it is shown that the monthly employment reports comprised 71.3 per cent of the workers in the industries covered. Since June, 1931, the number of firms reporting monthly has increased, being 9,270 in June, 1935, so that a larger percentage of employees in these industries are covered in the monthly reports than in 1931. The comparisons by economic areas and large cities show similar results.

**Industrial  
Unionism  
endorsed by  
mine workers**

Reference was made in the December, 1935, issue of the *LABOUR GAZETTE* (page 1088) to the resignation of John L. Lewis from the vice-

presidency of the American Federation of Labour. Following the resignation of Mr. Lewis, the chief officers of eight international unions constituted a Committee for Industrial Organization, its announced objective being the promotion of industrial unionism in the mass production industries. (The chairman of this committee is John L. Lewis, who is the President of the United Mine Workers of America.)

During the week of January 20 the executive of the American Federation of Labour, meeting in Miami, declared that in its opinion "the Committee for Industrial Organization should be immediately dissolved, that it should cease to function as assembled reports, facts and information indicate, and that the officers of the several organizations which constitute the Committee for Industrial Organization co-operate fully with the executive council in the application and execution of the organization policies adopted by an overwhelming majority of the duly accredited delegates who were in attendance at the convention of the A. F. of L. in Atlantic City, N.J., from October 7 to 19, 1935."

The following week the United Mine Workers of America (the largest union in affiliation with the American Federation of Labour) held its annual convention at Washington where the delegates, endorsing the report of their officers, expressed unanimous agreement with the policy of industrial unionism. It was further recommended "that at any time in the judgment of the international executive board conditions and circumstances warrant they are hereby authorized to withhold payment of further tax to the American Federation of Labour."

The convention also instructed its president, John L. Lewis, "to deliver a series of radio

addresses on a nation-wide hook-up stressing the importance of this entire problem."

At one session the delegates were addressed by Mr. William Green, president of the American Federation of Labour, who made a strong plea for peace within the ranks of organized labour. Following Mr. Green's speech, President Lewis, of the United Mine Workers, put the matter of dissolving the Committee for Industrial Organization to an immediate vote. Two delegates, it is reported, voted in favour of such action, while the rest of the convention registered its opposition.

**Progress in  
limitation of  
working hours**

In a review of the activity of the International Labour Office during 1935, the Monthly Summary of the I.L.O. traces the progress of the reduced working week since the embodiment of the principle of the eight-hour day and the forty-eight hour week in the constitution given to the Organization in 1919.

In 1935 the General Conference of the International Labour Organization voted a Convention affirming the principle of the forty-hour week without any lowering of the standard of living of the workers. (*LABOUR GAZETTE*, July, 1935, page 652.)

The International Labour Office points out that this comparison between the objective of 1919 and the action of the 1935 conference, shows the rapid development of the problem of the reduction of hours of work, regarded both as a means of alleviating unemployment and as a consequence of the steady march of technical progress. It also shows the important advance achieved during the past year by the Organization in one of the vital spheres of its activity.

It definitely announces that "the forty-hour week is henceforth the goal of its efforts," and that after having realized the first application of this principle by the adoption of a Convention for a further branch of the glass-making industry, it is preparing similar draft Conventions to apply the reform internationally in public works, the building and construction industry, iron and steel, coal mines and the textile industries, respectively.

At its 1936 session, which opens on June 4 in Geneva, the International Labour Conference will decide on the application of the forty-hour week to these various industries. The questions of the reduction of hours of work in the printing and bookbinding industries and in the chemical industry have been held over for probable inclusion on the agenda of the 1937 session of the Conference. Although exact figures are not available for all countries for the glass-making, printing

and book-binding, textile, mining, iron and steel, building and contracting and public works industries, yet it is evident that they already include several tens of millions of workers directly affected by the action of the International Labour Organization in the field of the limitation of hours of work.

The Nova Scotia Mining Society recently held its semi-annual meeting with a representative attendance of delegates from the provincial mining field. There were papers and discussions on practically every phase of mining hazard, such as: Transportation accidents; falls of roof and coal; safety propaganda; blasting of coal; the necessity for discipline, etc.

As a result of a study of psychological conditions affecting the productivity of workers, the Industrial Health Research Board of the Medical Research Council (Great Britain) has recently issued a book entitled "Incentives, Some Experimental Studies." A former report of the Board dealt particularly with the effect of incentives in repetitive work as studied from day to day in a factory. The present report describes experiments of a more academic nature, which nevertheless have practical implications for industrial management. These relate to the standards of effort which may reasonably be expected of a worker during his working day, and how they may be attained so that comfort and efficiency are balanced and sufficient energy is left for the worker to enjoy the pursuits of leisure.

According to a bulletin recently published by the United States Department of Labour, the total business done by the 2,517 reporting Co-operative Societies during 1933 in the United States amounted to \$87,495,582. More than half of the total—\$46,899,929—was accounted for by the local consumers' societies. The business of the nine wholesale societies amounted to \$8,748,726 and the remainder was accounted for by the credit unions and the workers' productive societies.

Although many of the co-operative enterprises operated at a loss in 1933, net savings or "profits" of \$2,016,420 are shown for all of the reporting societies combined. Part of this net gain—\$1,361,909—was returned to the shareholders in the form of patronage refunds and a total of \$1,179,231 was paid as interest on the outstanding share capital. The total resources of the societies for which information was available amounted to \$60,277,004. Of the total resources, \$32,293,059 represented paid-in share capital and \$7,132,888 represented accumulated reserves.

The United States Department of Labour has issued a bulletin dealing with "Some Important Features of Occupational Disease Legislation," in which it is pointed out that reliable authorities have estimated that suits at common law, pending in the country to-day, on occupational disease, total \$500,000,000.

Notice of assessment rates under the Workmen's Compensation Act for the province of New Brunswick as published in the Royal Gazette (New Brunswick) indicate no change, either by way of a reduction or an increase, in any of the industrial ratings for 1936. The assessment is based on every \$100 of payroll in the province under the jurisdiction of the Act. The highest rating is based on tunnelling, rock work and blasting, and on steel bridge construction in which groups the assessment is \$8 per \$100 of payroll. Erection of steel buildings carries an assessment of \$7; quarrying, \$7; saw-mills, shingle mills, etc., \$6.50; logging, etc., \$6.50; coal mining, \$6; stevedoring, \$6; bridge construction, \$6. The lowest rating is for printing, manufacturing of plating gold, watch-making, lens manufacturing—at 20 cents per \$100 of payroll; and for the manufacturing of clothing, hats other than felt, shirts, corsets, furs, oil clothing, awnings, tents—also 20 cents.

A Royal Commission on safety in mines has recently been appointed in Great Britain. The terms of reference of the commission are "to inquire whether the safety and health of mine workers can be better ensured by extending or modifying the principles or general provisions of the Coal Mines Act, 1911, or the arrangements for its administration, having regard to the changes that have taken place in organization, methods of work, and equipment since it became law, and the experience gained, and to make recommendations."

The United States Federal Committee on Apprentice Training has recently issued two brochures dealing with apprenticeship. In Bulletin No. 1 "What the Federal State Apprentice Training Program Means to Employers," it is pointed out that "apprentices will be directed into those occupations in which there is need for additional skilled employees," but that "apprentices will not displace skilled workers now employed." The program, it is claimed, will result in better craftsmen in all occupations, and in additional skilled employees only if there is a genuine need for them. Bulletin No. 2 reviews the organization, administration and the objectives of the program of apprentice training.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**T**WO applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour during the month of January as follows:—

(1) From certain employees of the Algoma Steel Corporation, Ltd., being members of the Algoma Steel Workers' Union. The dispute related to the matter of wages, 1,727 employees being directly affected. The Chief Conciliation Officer of the Department visited Sault Ste. Marie, and, as a result of conferences which he held with the interested parties, the dispute was amicably adjusted.

(2) From certain employees of the Brazeau Collieries, Ltd., being members of the Nordegg Local Union of the Mine Workers' Union of Canada. Two hundred and twenty employees were stated to be directly affected by the dispute, which related to the interpretation of a certain clause of the existing agreement. Shortly after receipt of the application advice was received in the Department that the point at issue had been settled to the satisfaction of the employees, who accordingly withdrew their application.

The text of the report of the Board of Conciliation and Investigation which dealt with a dispute between the Winnipeg Electric Company and affiliated companies and certain of their employees was printed in the January issue of the *LABOUR GAZETTE*, page 6. The dispute related to the matter of wages and working conditions, approximately 100 employees, members of the Association of Substation and Hydro Plant Employees, being directly affected. The companies affiliated with the Winnipeg Electric Company are the Manitoba Power Company, Ltd., the Northwestern Power Company, Ltd., and the Winnipeg, Selkirk and Lake Winnipeg Railway Company. Mr. Robert Jacob, K.C., the Chairman of the Board, and Mr. C. A. Clendenning, the member nominated by the employers, recommended against any increase in salaries, while Mr. R. B. Russell, the employees' nominee on the Board, submitted a minority report expressing the view that the increases sought by the employees should be granted. Towards the end of January the Department was advised that the decision embodied in the majority findings regarding wages had been accepted by both parties concerned and an agreement had been signed effective to April 30, 1936, and thereafter until terminated upon 30 days' notice given by either party prior to April 30, 1936, or May 1st in any

subsequent year. The matter of hours and working conditions had been already agreed upon during the hearings of the Board.

Reference was made in the December issue of the *LABOUR GAZETTE* (page 1089) to the receipt in the Department of Labour on December 2 of an application from the Lakeside Coals, Ltd., for the establishment of a Board of Conciliation and Investigation to deal with a dispute involving 80 employees at Robb, Alberta, members of the United Mine Workers of America. The dispute arose in connection with the employees' request for a wage increase of 5 per cent to conform with the recent wage increase in the Drumheller coal field. The employees ceased work on December 3, and the officers of the company subsequently issued orders to close the bunk houses and cook house at the camp. On December 4 an agreement was entered into between the Foothills Collieries, Ltd., and its employees at Mile 50 in the Coalspur District. The management of the Lakeside Coals, Ltd., had previously agreed that, if the Foothills Collieries advanced their employees' wages 5 per cent, they would grant a similar increase. An agreement on this basis was consummated on December 11, and the miners returned to work. However, the date from which the increase should be made effective remained in dispute, and this point was referred for decision to an independent chairman as provided in the clause of the agreement relating to the "Settlement of Local and General Disputes."

Applications were received in the Department of Labour on July 19 and August 26 respectively from employees of the Corporation of the City of Winnipeg, being, (1) linemen, cablemen, linemen's helpers, troublemen and groundmen, members of the Civic Linemen's Association, and (2) power-house operators, substation operators and assistant operators, meter installers and instrument men, stove repair electricians, maintenance and electrical mechanics, tramway employees (engineers, firemen, etc.), central steam heating division (engineers and firemen, etc.), members of the Federation of Civic Employees of the City of Winnipeg and affiliated unions (*LABOUR GAZETTE*, August, 1935, page 716, and September, 1935, page 803). The Department was advised recently that in the case of each of these disputes the matters at issue had been amicably adjusted as a result of direct negotiations between the parties concerned. Board procedure will accordingly be unnecessary.

## STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES DURING THE YEAR 1935

THE number of disputes in Canada during 1935, the numbers of workers involved and the time loss incurred, showed considerable decreases from the figures for 1934, and, except in the number of workers involved, were also somewhat lower than in 1933. Most of the time loss occurred in coal mining, logging, clothing manufacturing and water transportation (longshoremen), but there was also substantial time loss in fishing, printing and in shoe and metal manufacturing. The more important disputes involved coal miners at Corbin, B.C., loggers in the Nipigon district in Ontario, longshoremen at Vancouver, also longshoremen, ship crews, etc., in British Columbia ports on strike in sympathy with the longshoremen at Vancouver, and longshoremen at Montreal, while there were several disputes in

clothing, woodworking and shoe factories, as well as two important disputes involving printing compositors. Demands for increases in wages were the chief causes of the disputes in fishing, logging, and in the manufacture of clothing and shoes, but in the disputes involving coal miners, longshoremen and woodworkers the chief causes were the relation of employers to unions and conditions affecting this or arising out of it. A small number of disputes resulted from demands for the eight hour day or for increases in hourly rates of wages when hours were reduced, but these were soon settled.

The accompanying table of strikes and lockouts in Canada from 1901 to 1934, inclusive, gives figures as to all disputes, as to coal mining separately, and for those in industries other

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1935

Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days
1901.....	97	99	285	24,089	737,808	2	1,760	7,040	97	22,329	730,768

\*In these totals figures for disputes extending over the end of a year are counted more than once.

than coal mining. For many of the years the figures for coal mining account for very large percentages of the numbers of employees involved and of the time loss incurred. It will be observed that since 1925 the figures for coal mines have been comparatively small.

### Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the *LABOUR GAZETTE* have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the *LABOUR GAZETTE*, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned

in the *LABOUR GAZETTE* at the time of their occurrence. During 1935 there were 16 such disputes, involving 583 employees, making a time loss of 79 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known and not replaced. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the number indirectly affected has been shown in footnotes to Table X.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes (previously recorded) as to which information has been received indicating that employment conditions are no longer affected, but which the unions or organizations concerned have not yet declared terminated.

Information is available as to the following disputes of this nature which were carried over from 1934 but were called off or lapsed during 1935: compositors, London, Ont., commenced March 1, 1934, two employers, called off by the union April 27, 1935; and shoe factory workers, Preston, Ont., commenced September 13, 1934, one employer, lapsed by the end of March, 1935. The following disputes of the same nature were still on record at the end of 1935: photo-engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., commenced May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., commenced July 11, 1932; and moulders, Peterborough, Ont., commenced February 27, 1934, one employer.

### Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910,

### LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-1935

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF  
EMPLOYEES INVOLVED EACH YEAR 1901-1935

NUMBER OF  
EMPLOYEES

1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932 and again in 1934, time loss was greater than since 1925. In 1919 the time loss due to general strikes is shown separately.

In Metal Manufacturing considerable time loss appeared in 1919 and 1920. In Construction considerable time loss appeared only in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in Clothing, etc. (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925 and 1926, with an appreciable amount in 1930, 1931, 1932, 1933 and 1934. The time loss in Other Manufacturing was large in 1901, due to a lock-out of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week. In 1931 and 1932 a number of disputes in sawmills caused appreciable time loss. Logging, included under Other Industries, showed considerable time loss in 1933, 1934 and 1935, as in 1919, 1920, 1926 and 1929.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933, 1934 and 1935, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

### Review of Disputes by Industries, 1935

**AGRICULTURE.**—From 1901 to 1934 only six strikes in this industry were reported to the Department, involving chiefly hop pickers in British Columbia, two in 1905, two in 1921, one in 1933 and one in 1934. One strike of hop pickers was reported in 1935, which lasted only one day, resulting from a demand for an increase in piece rates, and it was unsuccessful. Two strikes of cherry pickers occurred in Ontario in 1935 involving small numbers of workers for a day or less. Two strikes of sugar beet field workers occurred in Alberta and Ontario, respectively, one involving 800 men for a month and the other involving 90 men for sixteen working days. Three of these four were partially successful.

**LOGGING.**—The strike of 2,100 pulpwood cutters in the Nipigon district in northern Ontario from June 19 to July 18 was one of the most important disputes during the year. Increases in wages and improvements in camp conditions were demanded and some changes were made, agreements being reached between some of the employers and committees of workers. The only other dispute in this industry involved thirty-two tie cutters in one locality in British Columbia and resulted in wage increases after three days.

**FISHING AND TRAPPING.**—Four disputes involved fishermen in British Columbia, three of which resulted from demands for increases in rates of payment for fish and were partially successful. The other dispute arose over the interpretation of the agreement as to division of the proceeds from sale of the catch, the employer being successful.

**MINING.**—The most important dispute involved coal miners at Corbin, B.C., demanding reinstatement of a dismissed employee and improvements in hours and working conditions. Being unable to reach a satisfactory settlement with the workers, though practically all demands were conceded, and as operations at a surface mine, operated by steam shovels, were prevented by pickets, the employing company finally closed both mines permanently. A strike of gold miners in British Columbia for increased wages caused time loss of 7,500 days, being terminated by a compromise arranged by the provincial Deputy Minister of Labour pending reference to a Board under the Industrial Disputes Investigation Act. The Board approved the wage scale accepted tentatively. Coal miners in three mines in the Drumheller district of Alberta and in one mine at Robb, Alberta, ceased work to secure a five per cent increase in wages recommended by a Board under the Industrial Disputes Investigation Act and granted by other employers, and succeeded. Other stoppages involving coal miners resulted from local disputes and did not involve large numbers of employers for long periods in most cases.

**MANUFACTURING.**—The principal disputes involved cloakmakers, dressmakers and millinery workers at Toronto, Ont., and men's clothing workers (coats and suits), cloakmakers and millinery workers at Montreal, P.Q. Each of these disputes involved a large number of establishments, the cause being a demand for a union agreement, and all were successful as most of the important establishments had already negotiated and reached agreements on

most points. The other disputes in clothing factories involved individual establishments and were caused by demands for increased wages or union agreements. A strike of cotton factory workers at Three Rivers was settled in a short time by the mayor, the employer agreeing to deal with a committee of employees, but not the union, and to re-instate men with dependents, who had been replaced by girls.

Disputes in newspaper printing establishments in Winnipeg, Man., and Calgary, Alta., occurred as a result of a demand by the union for the forty-hour week, the employers making closed shop agreements with new unions providing for the forty-four hour week and the same wage rates as before, dismissing those refusing to join the new union. A strike against a ten per cent decrease in wages in one establishment in Calgary, Alta., was unsuccessful, the strikers being replaced.

**CONSTRUCTION.**—None of the disputes involved large numbers of workers or caused much time loss.

**TRANSPORTATION AND PUBLIC UTILITIES.**—A number of disputes occurred on the Pacific Coast in water transportation, some involving members of ship crews demanding union recognition or wage increases or both from individual employers, also boom log workers and longshoremen supporting them. The most important disputes, however, were a strike of longshoremen at Vancouver, B.C., refusing to handle cargo from Powell River, B.C., claimed to have been loaded by strike breakers, and a sympathetic strike of coastwise longshoremen, ship crews, boom log workers, etc., and longshoremen at other ports. These strikes lasted from June to December although the strikers were replaced to a great extent within a few weeks' time. The members of the Shipping Federation at Vancouver, B.C., cancelled the agreement with the union as a result of this and previous violations and reached agreements with unions composed of men who had left the longshoremen's union on strike, either before or after the strike, not supporting its policies. The dispute was investigated by a Commissioner appointed under the Inquiries Act in accordance with Section 65 of the Industrial Disputes Investigation Act, who reported that the strike was not justified (LABOUR GAZETTE, November, 1935, pages 982-995). As a result of disputes with the union, the Shipping Federation had already applied for a Board before the strike occurred. A riot occurred at Vancouver on June 18, a number of persons being injured. Several persons were sentenced to imprison-

ment as a result of this riot and of numerous individual attacks on workmen from time to time.

**TRADE.**—Strikes of dairy drivers occurred in Toronto, Ont., and Hamilton, Ont., each involving one establishment, in disputes as to conditions in agreements proposed. The strikers were successful at Toronto but not at Hamilton. A strike of rag sorters at Montreal, P.Q., was unsuccessful.

**SERVICE.**—Restaurant and hotel employees were involved in several disputes as to wages and union relations but none involved large numbers of employees for long periods.

### Analysis of Statistics, 1935

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903, 1929, and 1934. The approximate number of employers involved in all industries as well as the number of workers involved and the time loss is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II gives an analysis by numbers of workers involved and shows that twelve out of 120 disputes involved over 1,000 employees in each case and these disputes caused nearly one-half of the time loss for the year, while there were appreciable numbers of disputes involving between 100 and 1,000 employees and causing a considerable percentage of the time loss.

Table III gives an analysis by time loss and shows that none of the disputes caused over 50,000 days' time loss but there were six resulting in losses of over 10,000 days and 34 causing between 1,000 and 10,000 days' loss. Two-thirds of the disputes resulted in less than 1,000 days loss each, causing altogether only six and one-half per cent of the total for the year.

Table IV, an analysis by duration, indicates that only 19 disputes lasted 25 days or more but caused nearly one-half of the time

TABLE II.—STRIKES AND LOCKOUTS, 1935, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Number involved		Time loss	
	Number	Per cent of total	Workers	Per cent of total	Man-working days	Per cent of total
1,000 and over.....	12	10.0	19,150	57.6	136,050	47.0

Yukon Territory.....						
Interprovincial.....	1	0.8	150	0.5	25	0.0
Total.....	120	100.0	33,269	100.0	288,703	100.0

loss for the year while 81 disputes lasted less than ten days but involved two-thirds of the workers affected by all disputes and caused 26 per cent of the total time loss for the year.

Table V, an analysis by provinces, shows that the largest time loss of the year occurred in British Columbia where longshoremen and water transport workers in Vancouver and other ports were on strike from June to December, and where two important strikes of coal miners and one of gold miners occurred, as well as a number of less extensive disputes. Ontario, Quebec, Nova Scotia and Alberta also had considerable time loss, the largest number of disputes being recorded for Ontario. One interprovincial dispute involved lake and river steamships from Montreal, P.Q., to Fort William, Ont., but involved only 150 workers for a short time as there was very little response to the strike call.

Table VI, an analysis by industry, shows that most of the time loss was in manufacturing,

mining, transportation and logging, and that there were small numbers of disputes in most of the groups, many involving small numbers of workers and causing little time loss.

Table VII, an analysis by causes and results, shows that half of the disputes occurred over wages, chiefly for increases and related causes, while only three were caused by reductions. Twenty-eight of the disputes were caused by union questions, twelve being to secure union wages and conditions already in force in other establishments or to maintain them in the establishments affected. Forty-three disputes were terminated wholly or substantially in favour of the workers, thirty in favour of employers, and forty-two resulted in compromises or were partially successful. A relatively large percentage of workers were unsuccessful owing to the failure of strikes of waterfront workers at Vancouver and other ports, and coal miners at Cumberland and Corbin, B.C.

(Continued on page 131)

(Continued from page 118)

Table VIII, an analysis by industries and method of settlement, shows that approximately one-half of the disputes were settled by negotiations and these included nearly one-half of all the workers involved in disputes. A relatively large number of disputes were settled by conciliation and there was also conciliation in the three disputes followed by proceedings under the Industrial Disputes Investigation Act. Ten disputes involving nearly 5,000 workers were terminated by the return of workers on employers' terms and 17 disputes involving over 3,000 employees were terminated by the replacement of workers on strike or locked out. In several of these disputes both methods were factors and in this table the distinction is made in each case according to which method was the more important or determining factor. Of the three disputes shown under "indefinite or un-terminated" one was un-terminated and in the other two cases the establishments were closed down.

### Strikes and Lockouts in other Countries during 1935

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they are not parties; but exact information as to this point is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to

Table IX gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally occurs in May and that the greatest time loss generally occurs in July. Since 1930 May has not been the month in which the largest numbers of disputes occurred, partly because there have been comparatively few strikes in building trades in recent years. The months marked by large numbers of disputes and heavy time loss have, therefore, varied from year to year. In 1935 July showed the largest number of disputes, June the largest number of workers involved and August the greatest time loss. In November and December there was little time loss.

Table X gives the list of strikes and lockouts occurring during the year, with certain details as to causes, results, etc.

the method adopted by the country concerned.

For some countries, figures as to time loss, that is the number of "man working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

In the following notes as to some of the important disputes in various countries in the year 1935, the information is taken as far as possible from official sources, but where the information is not thus available, newspaper reports have been used.

#### Great Britain

The number of disputes occurring in the year 1935 was greater than for any year since 1925. The number of workers involved and the time loss was not, however, correspondingly high, as most of the disputes involved only small numbers of workers. Nearly 70 per cent of the total time loss for the year was in the coal mining industry. The chief disputes in this industry concerned union membership. In the first, 14,500 miners in South Wales and Monmouthshire were involved from September 30 to October 5 or October 9. A second coal mining dispute later in October in the same district involved 55,000 miners, but work was

resumed in all these collieries by October 25. In the fishing industry at Hull, nearly 5,000 workers were on strike from April 1 until April 20, when a compromise settlement was reached as to prices for fish oil.

### Belgium

A strike of 15,000 coal miners in the Chareloi district is reported to have been in effect from May 21 to May 27, when a compromise settlement was reached, providing for an increase in wages of 2½ per cent.

### Irish Free State

A strike of 3,000 tramway workers at Dublin lasted eleven weeks and was settled May 17 through government conciliation. The settlement provided for a wage increase.

### United States

A strike of 2,100 automobile manufacturing workers at one plant at Toledo, Ohio, began April 23 owing to a dispute over union questions and also over wages and other conditions. On April 30, a strike of automobile workers, employees of the same corporation, began at Cincinnati, Ohio; and at Cleveland, Ohio, and Atlanta, Georgia, sympathetic strikes were called. In these cities, 15,000 employees of the corporation were on strike and an additional 15,000 workers were indirectly involved in other plants due to a shortage of materials from the plants involved in the strike. With the assistance of Department of Labor conciliators the strike at Toledo and the sympathetic strikes at Cleveland and Atlanta were called off May 14 and the Cincinnati strike on May 28. The settlement reached provided that any future disputes be dealt with by the Department of Labor and not by the Automobile Labor Board, and also provided for a wage increase of 4 cents per hour, for time and one-half for all work over 48 hours per week and other concessions to the workers.

Strikes of workers in the lumbering industry in the states of Washington and Oregon began May 6. The demands were for increased wages, shorter hours and union recognition. Two unions and an independent strike committee were involved. By the first of June, 32,000 lumber workers were out on strike, these comprising the great majority of the workers employed in the lumbering industry in these states. The Federal Lumber Mediation Board appointed by the Secretary of Labor began negotiations in June and several companies resumed operations at a minimum wage rate of 50 cents per hour, which was an increase. The strike was continued with other companies, however, until the middle of August, by which time practically all mills were reopened, the settlements varying with the different employers, some granting union recognition.

A general strike, involving 26,000 workers, tied up all transportation and industry at Terre Haute, Indiana, for two days July 22 and July 23. It was called in protest against a metal manufacturing company bringing guards from another city in connection with a strike at that company's plant. The general strike was ended after two days, but no report of the result of the original strike has been noted. This is the third general strike which has taken place in the United States, the other two having occurred in Seattle in 1919 and in San Francisco in 1934.

At Camden, New Jersey, 4,000 employees of a shipbuilding corporation were on strike from May 13 to August 29. A settlement was finally reached through an arbitration board appointed by the President of the United States. The chief demands of the strikers had been for a 15 per cent increase in wages, the elimination of piecework and a preferential union shop. The settlement provided for a 5 per cent wage increase, the pay for piecework not to be less than the hourly pay, and for no discrimination between union and non-union members.

In the dress manufacturing industry in New York city, a strike of shipping clerks at the end of August was supported by a sympathetic strike of 10,000 dressmakers which terminated when a settlement was reached of the shipping clerks' strike on September 11.

The largest strike of the year was that in the bituminous coal mining industry in the Appalachian and outlying districts, which involved 400,000 workers. The general agreement had expired March 31, and had been extended for short periods several times at the request of the President of the United States, but finally, when no agreement could be reached, a strike was called September 23. The Assistant Secretary of Labor of the United States acted as mediator. An agreement was drawn up and the majority of the miners went back to work under it on October 1, but those in the Virginia district and Hazard County, Kentucky, only when the agreement was signed there a few days later, and the Southern Appalachian field when the agreement was signed there on October 31. The agreement reached provided for substantial gains for the miners, a 50 cent per day increase for day workers except for certain work for which a 70 cent per day increase was granted, 9 cents per ton increase in tonnage rates and a 10 per cent increase for yardage and deadwork. (No report of a settlement in the remaining district, Harlan County, Kentucky, has been noted.) Another strike involving 20,000 coal miners in Alabama, which also began on September 23, was settled November 16, with increases in wages of approximately half those granted under the Appalachian agreement.

(r) Since April, 1933, stoppages of work on account of industrial disputes have been forbidden by law.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on page 133 of this issue. Information as to particular disputes is obtained for the most part from newspaper reports.

## Great Britain

Preliminary figures for the year 1935 show 553 disputes beginning in the year, involving 271,000 workers, with a time loss of 1,920,000 working days for the year. Nearly 70 per cent of the total time loss for the year occurred in the coal mining industry. Of the 553 disputes beginning in the year, 84 were over demands for increases in wages, 42 over proposed reductions in wages, 124 over other wage questions, 11 over questions as to working hours, 152 over questions respecting the employment of particular classes or persons, 85 over other questions as to working arrangements, 36 over trade union questions, 16 were stoppages of work on account of sympathetic action and 3 were over other questions.

The number of disputes beginning in December, 1935, was 37 and 14 were still in progress from the previous month, making a total of 51 disputes in progress during the month, involving 22,000 workers with a time loss of 141,000 working days for the month. Of the 37 disputes beginning in the month, 3 were over demands for increases in wages, 2 over proposed wage reductions, 13 over other wage questions, 7 over questions as to the employment of particular classes or persons, 11 over other questions; one stoppage was due to sympathetic action. Settlements were reached in 29 disputes in December, of which 7 were in favour of workers, 12 in favour of employers, 10 were compromise settlements. In 5 other disputes work was resumed pending negotiations.

## United States

The number of disputes beginning in November was 106 and 120 were still in progress from the previous month, making a total of 226 disputes in progress during the month, involving 90,000 workers with a time loss of 1,169,000 working days for the month.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1936

THE following table shows the number of disputes, workers involved and time loss for January, 1936, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan., 1936 .....	4	205	1,105
Dec., 1935 .....	8	431	3,152
Jan., 1935 .....	10	4,832	26,780

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which came to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of disputes during January was the smallest on record for some time and none of them involved large numbers of employees or were of considerable duration. In December, two important disputes involving water transport workers at Vancouver, B.C., and other points were terminated early in the month. In January last year there were two important disputes involving coal miners at Springhill, N.S., and Corbin, B.C. also two strikes of cloakmakers and dressmakers at Toronto, Ont.

One dispute, involving fifty workers, was carried over from December and three disputes commenced during January. All four of these disputes terminated during the month, one resulting in favour of the workers involved, one in favour of the employer concerned, one being partially successful, while the result of one was recorded as a compromise. At the end of January, therefore, there were no strikes or lockouts on record.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available

as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involving five employees in one bakery at Toronto, Ont., for one day on December 23 has been reported recently. It is stated that the strikers demanded that the drivers should belong to the union and that this was conceded.

A cessation of work at Truro, N.S., on December 31 by twenty men engaged by the city authorities to clear snow has been reported recently. The men demanded the regular civic rate of pay instead of 20 cents per hour. As the work was done in order to provide employment, the demand was not conceded.

A strike of gold miners at Camborne, B.C., about the middle of January has been reported, but no particulars have been received except that the dispute has been terminated.

A cessation of work by coal miners in one colliery at Drumheller, Alta., for a few hours early in January has been reported but particulars have not been received.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**TRUCK DRIVERS, WINNIPEG, MAN.**—Drivers, most of whom are reported to have been operating their own trucks, had ceased work on December 30, 1935, demanding increases in the rates of pay for the delivery of coal and wood, from fuel dealers, some of whom had engaged them to supplement their own delivery service while others had no other means of delivery. A considerable number of the strikers had settled with the dealers on December 30 and December 31, but about fifty were still on strike at the beginning of January. From time to time various dealers signed agreements with the truck drivers' association and on January 15 the strike was called off, but about ten per cent of the strikers had been replaced. The agreement provided for substantial increases in rates and greater allowances according to distance.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1936\*

Industry, occupation and locality	Number of em- ployees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to January, 1936			
TRANSPORTATION— <i>Local—</i> Truck drivers, Winnipeg, Man.	50	250	Commenced Dec. 30, 1935; for increased piece rates and changes in conditions; terminated Jan. 15, 1936; partially successful.
(b) Strikes and Lockouts Commencing during January, 1936			
MINING, ETC.— Coal miners, Drumheller, Alta.	75	75	Commenced Jan. 8, 1936; against dismissal of worker; terminated Jan. 8, 1936; in favour of workers.
MANUFACTURING— <i>Boots and Shoes—</i> Shoe factory workers, Toronto, Ont.....	50	450	Commenced Jan. 7, 1936; against reduction in wages, piece rates; terminated Jan. 16, 1936; in favour of employer.
<i>Other Wood Products—</i> Shingle mill workers, Port Moody, B.C.....	30	330	Commenced Jan. 15, 1936; against dismissal of union workers and 10 per cent reduction in wages; terminated Jan. 27, 1936; compromise.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

COAL MINERS, DRUMHELLER, ALTA.—Employees in one colliery ceased work on January 8 demanding the reinstatement of a miner dismissed for loading "dirty" coal. The miners claimed that he had not been warned as required under the terms of the agreement. Work was resumed next day, the employer having reinstated the miner and agreed that in future men would be dismissed only after being warned twice.

SHOE FACTORY WORKERS, TORONTO, ONT.—Employees in one factory ceased work on January 7 against a reduction in piece rates,

claimed to be 20 per cent, for work on a new line of shoes. On January 17 work was resumed at rates reported to be reduced only fifteen per cent.

SHINGLE MILL WORKERS, PORT MOODY, B.C.—Employees in one establishment ceased work on January 15 against the dismissal of a union worker and a ten per cent wage reduction. The re-employment of union workers laid off some time previously was also demanded. Work was resumed on January 28 when the demands were conceded, except that a compromise was reached on the wage reduction.

The classification of occupational diseases is dealt with in an article by Dr. Emery R. Hayhurst, consultant in Occupational Diseases, State Department of Health, Columbia, Ohio, which appears in a recent issue of "Industrial Medicine." In his classification, the writer groups the health hazards which may produce a specific occupational disease. This grouping is analyzed under the following divisions: Poisons; mechanical irritants, friction, fatigue, infections, diseases following accidental injuries at work, illumination affliction, high temperature, noise and abnormal atmospheric pressures.

The Ontario Vocational Guidance Association has issued a series of bulletins dealing with various topics of vocational guidance, such as: Prediction of occupational trends; origin, aims and programs of the Ontario Vocational Guidance Association; the selection and guidance of college students; bibliography on vocational guidance; personnel problems in the packing industry; problems in the field of vocational guidance; and the choice of a secondary school course by the Ontario student.

Copies of these bulletins may be obtained from the Secretary, Ontario Vocational Guidance Association, 27 Albany Avenue, Toronto.

## SUPREME COURT HEARINGS RESPECTING VALIDITY OF SOCIAL LEGISLATION

REFERENCE was made in the *LABOUR GAZETTE* for November, 1935 (page 976), to the decision of the Dominion Government to refer to the Supreme Court of Canada certain measures (enacted during the 1935 session of Parliament) in order to secure a judicial determination as to whether the Acts in question are *ultra vires* of the Dominion Parliament.

Hearings were conducted before the Supreme Court of Canada between January 15 and February 5 of the arguments in respect of the validity of eight federal statutes which were adopted at the last parliamentary session as follows:—

Section 498a of the Criminal Code;  
Dominion Trade and Industry Commission Act;  
Employment and Social Insurance Act;  
Weekly Rest in Industrial Undertakings Act;  
Minimum Wages Act;  
Limitation of Hours of Work Act;  
Natural Products Marketing Act; and  
Farmers' Creditors Arrangement Act.

Facts were submitted in respect of all of these references on behalf of the Government of Canada and on behalf of each of the respective provinces. Counsel were present also on behalf of the Attorney-General of Canada and the Attorneys-General of the respective provinces.

The argument in support of the validity of the Weekly Rest in Industrial Undertakings Act, the Minimum Wages Act, the Limitation of Hours of Work Act and the Employment and Social Insurance Act was conducted on behalf of the Attorney-General of Canada by Hon. N. W. Rowell, K.C., Mr. L. S. St. Laurent, K.C., of Quebec, and Mr. C. P. Plaxton, K.C., of the Department of Justice.

In the factum submitted on behalf of the Attorney-General of Canada in respect of the Weekly Rest in Industrial Undertakings Act, the Minimum Wages Act, and the Limitation of Hours of Work Act, it was contended that these respective statutes are "in their entirety within the legislative powers of the Parliament of Canada" for the following reasons:—

1. In virtue of its exclusive legislative power under s. 132 of the British North America Act, 1867, or/and of its general power conferred by s. 91 of the said Act to make laws for the peace, order and good government of Canada, to perform the obligations of Canada under, and as a signatory of, the Treaty of Peace signed at

Versailles on June 28, 1919, and also under the several Draft Conventions ratified by Canada as a Member of the International Labour Organization as hereinbefore mentioned;

2. In virtue of its general power conferred by s. 91 of the British North America Act to make laws for the peace, order and good government of Canada, in relation to the subject matter of the said Acts;

3. In virtue of its exclusive legislative authority in relation to the regulation of trade and commerce; and

4. In virtue of its exclusive legislative authority in relation to the criminal law.

All of the provinces attacked these respective enactments on the ground that Parliament had no power to invade provincial rights on a pretext of implementing treaty obligations. Ontario, however, submitted various reasons which in their judgment probably might be held to justify these statutes as having been passed in the exercise of the power of the Dominion Parliament to make laws for the peace, order and good Government of Canada to deal with matters of national interest and importance.

In the factum submitted on behalf of the Attorney-General of Canada in respect of the validity of the Employment and Social Insurance Act, it was contended that this Act "in its entirety is within the legislative powers of the Parliament of Canada in virtue of (1) its residuary power to make laws for the peace, order and good government of Canada; and (2) its exclusive powers (a) to regulate trade and commerce; (b) to raise money by any mode or system of taxation; (c) to appropriate public money for any public purpose; (d) to provide for the collection of statistics; and incidentally, (e) to enact criminal laws."

The validity of this legislation was contested on behalf of all the provinces. Ontario, however, made the same admission with respect to this statute as in the case of the other three Acts mentioned in the preceding paragraph.

Judgment on all the eight references was reserved by the Court until a later date.

The New York State Employment Service (affiliated with the United States Employment Service) has recently issued a manual of placement procedure entitled "How Physically Handicapped People Find Work."

## INTERIM REPORT ON RELIEF CAMPS IN CANADA

### Recommendations of Special Committee Appointed to Investigate Conditions

THE special committee appointed to investigate the situation with respect to relief camps in Canada (LABOUR GAZETTE, December, 1935, page 1086) has submitted an interim report, following a comprehensive survey of conditions from close personal observation.

Comprising the Committee were: R. A. Rigg, Director of the Employment Service Branch, Department of Labour; Humphrey Mitchell, formerly Member of Parliament for East Hamilton; and E. W. Bradwin, Ph.D., of Toronto, Principal of the Frontier College.

At the end of last November the Committee was appointed to make a personal survey of the relief camp situation in Canada, with a view to the preparation of a report based thereon for submission to the Minister of Labour. This step was taken in view of the eventual transfer of such camps to the jurisdiction of the Department of Labour, except that such camps were to remain under the control of the Department of National Defence where engaged upon projects for the furtherance of the work of that Department. In a letter from the Minister of Labour to the members of the Committee, dated November 28, 1935, and referred to in the Interim Report, terms of reference were set out as follows:—

- (1) The desirability of continuing the Relief Camps on their present basis or in any other form;
- (2) The allowance or wage policy which should be followed in the Relief Camps during their continuance and the relation of any proposed change in allowance to other forms of Unemployment Relief and more particularly to existing schemes for farm placement carried out in co-operation with the provinces;
- (3) The adequacy of existing facilities for re-establishing men now in Relief Camps in industrial and agricultural employment;
- (4) The adequacy of existing facilities for a general education, occupational training and supervised recreation;
- (5) Any other matter in relation to the administration of Relief Camps which you deem to be of importance in the formulation of the policy of the Department of Labour in relation to these camps.

With the official release of the report, the Hon. Norman McL. Rogers, Minister of Labour, issued a prefatory statement as follows:—

"The members of the committee were selected for the task because of their special

knowledge in regard to the several aspects of the relief camp problem. They approached their investigation with a sympathetic understanding of the human factors in the problem and with a knowledge as well of the practical considerations which must also have their bearing on government policy. This report is being released because of the widespread interest in relief camps throughout the country. We propose to take the people into our confidence in regard to the whole matter. Wherever it is possible to do so, I think it is desirable to throw a clear light on a problem in order that the taxpayers and citizens generally may know the reason for the adoption of particular policies."

#### Interim Report of Committee

The following is the interim report of the committee:—

OTTAWA, January 31, 1936.

Hon. NORMAN McL. ROGERS,  
Minister of Labour,  
Ottawa, Ontario.

HONOURABLE SIR,—We, the members of the committee appointed to inspect Relief Camps and to report thereon in accordance with the instructions contained in your letter of reference dated November 28, 1935, beg to submit the following as an interim report:—

We arrived in Washington, D.C., on December 3, 1935, and interviewed several officials charged with the administration of C.C.C. Camps, and visited a few of the camps in the vicinity of Washington. Since these camps are operated on a vastly different basis to our Canadian Relief Camps, the points of comparison are few, and of rather minor significance. We are, therefore, refraining from submitting at this time a detailed report upon them, but will do so when making our final report.

On December 5, we had a lengthy interview with Mr. Charles H. Alspach, Director of Transient Camps, and his assistant, Mr. Richter. These officials have charge of the administration of three hundred and fifty camps which house about fifty thousand non-family men. The cost of food, clothing, shelter and administration, but not including capital expenditures, is about seventy cents per diem per man. Until quite recently the men in these camps received a money payment of \$1 per week. The camps have now been put upon a work and wages basis, with satisfactory results

in the form of improved morale amongst the men and a better disposition to work. Monthly wages paid are—unskilled \$15, semi-skilled \$20, and skilled \$25. Food and shelter are provided but men are required to purchase their own clothing. Local, State and Federal Government Officials prepare the projects data, plans and specifications of which are forwarded to Washington for approval, amendment or rejection. State agencies are required to provide some form of assistance either in the form of cost of administration, materials, machinery, etc. Local advisory bodies are formed to assist in the rehabilitation of the enrollees back into industry. A close tie-up exists between the camps and the public employment offices to further facilitate the re-establishment of the men in industrial employment. Camp teachers are generally selected from persons on relief. While the C.C.C. Camps are under the direct control of army reserve officers, who wear full military uniforms and demand military recognition from the men, it has been found that the transient type resents military administration. Very little trouble has been experienced from Communists, but agitators are summarily dismissed from the camps.

We returned to Canada, arriving at Winnipeg on December 8, 1935. Since that date we have inspected some fifty camps, extending from Valcartier in the East to those on Vancouver Island in the West. Members of Parliament, Officers Commanding Military Districts and many of their Staff Officers, Provincial Cabinet Ministers, mayors and other civic representatives, and provincial and civic officials have been interviewed, in addition to which innumerable personal interviews were had with men of all ages and occupations in the camps.

We beg to report specifically on the five phases of our inquiry, set forth in the Minister's letter of reference, as follows:—

1. The evidence we have accumulated compels us to advise that continuance of the camps for a temporary period is necessary. The facilities for employment in private industry and agriculture are insufficient to absorb any considerable number of those in the camps at the present time. Representations have been made to us by a few of the camp workers whom we have interviewed that the camps should be abolished, but when asked what alternative they had to suggest, the invariable reply was "Give us real employment."

Relief camp workers may be classified under four broad types:—

(a) There is a goodly percentage of young men who still retain an eager desire to occupy a useful place in society and to devote their energies and abilities to industrial, commercial or agricultural employment.

(b) The majority of the relief camp workers consists of that body of men of more mature age, who, while not so keenly ambitious as the younger element, are, nevertheless, yearning for the opportunity to independently maintain themselves through the medium of normal, remunerative, private or public employment.

(c) There is a group of young men whose ages range from eighteen to twenty-five years, many of whom have never had other than occasional, casual employment and who, therefore, have not acquired the habit of working or the sense of individual responsibility to society. These young fellows have suffered through thwarted ambitions and the lack of visible grounds of hope for the future, and have become an easy prey to the subversive influences of Communistic or Anarchistic philosophy, sedulously propagated by experienced agitators. Most of these young men are gifted with average intelligence and if they had grown up surrounded by the influences of a normal environment, which included useful work, they would no doubt have given a good account of themselves. Under the influences among which they have lived during the past few years, however, they constitute a real menace to the maintenance of our existing institutions. They are viciously rebellious against, and defiant to authority; they shirk work and are determined to continue to do so; they assert that society owes them a living and are oblivious of the obligations they owe to society; they are acquiring undesirable habits, especially by moving from camp to camp, often under assumed names, staying in each camp long enough to secure a complete issue of clothing and then leaving camp, selling the issued clothing and shoes, and donning ordinary cheap, mufti clothing; they disturb and irritate more reasonable and stable-minded men, and are a constant source of trouble to camp authorities.

(d) This group comprises a quite substantial number of older men who through age, coupled with the deteriorating influence of several years of dependence upon public charity, will never again be able to successfully compete for steady jobs in the open labour market.

It is of the most pressing importance that very determined efforts should be made to explore the resources of Canada, both public and private, for the purpose of developing fields of industrial employment in order that the men included in the types A, B and C might be absorbed as speedily as possible in useful work at current rates of wages and thus become self-sustaining. In other words, it is eminently desirable that the camps, whether operating on the present basis or on any other relief basis, should be closed as soon

as possible in the best interest of the State and for the sound, healthy development of the majority of the men now in the camps.

Camps have played a notable part in the development of Canada in the past and will continue to do so for many years to come. Under normal conditions they attract for certain seasons of each year from 80,000 to 120,000 men who have chosen lumbering, mining and railroad construction work in preference to other avenues of employment. It should, however, be borne in mind that many of the men in relief camps to-day are unsuited by background, training and adaptability for regular camp life and are merely awaiting, with varying degrees of patience, the first opportunity that may be presented to return to avocations more suited to their temperament and upbringing. Apart from those who may be classed as unemployable in the broad meaning of that term, relief camp conditions cannot be regarded other than as exercising a baneful mental and moral influence.

The idea should not be entertained that relief camps are a permanent governmental activity, but rather they should be regarded as a temporary expedient for meeting an emergency situation. At present, due to the prolongation of their existence, they constitute a serious danger, since the tendency must inevitably be that they will be accepted as a fixed, national institution akin to the Poor Law Work Houses of Europe, if their existence is long perpetuated.

Your investigators are definitely convinced that the size of camps should be limited to accommodate a maximum of not more than about one hundred and forty men. The efficient exercise of reasonable and necessary disciplinary authority varies inversely with the increase of the relief camp population beyond about that number. Our experiences and observations at the Dundurn Camp satisfied us conclusively that large camps are most undesirable. The concentration of such a large and virile body of men, few of whom are, or could reasonably be expected to be satisfied with their lot, affords the most suitable opportunity for the successful propagation of subversive ideas and the stimulation of the spirit of rebelliousness, and increases the difficulties of administration and the exercise of authority to a maximum degree. We desire to emphasize these two points. Firstly, Communist agitators, that is the agents of the Workers Unity League and its subsidiaries, are expert in the art of inoculating the minds of relief camp workers, particularly the younger element, with the virus of discontent. The policy is not necessarily to teach the doctrines of

Communism openly, but rather to suggest them covertly and as being of secondary importance. The principal and direct object sought is to fan to flame the sense of injustice which is felt by these men and especially to incite the young fellows to disobedience. These young men become trouble makers. They refuse or shirk work and break regulations indiscriminately. In the meantime, the promoters of this state of affairs are doing their work industriously and are faithfully observing the camp regulations. The ostensible cause of the Dundurn strike was that young men—mere youths—were being discharged in winter time without money or means to go anywhere with any prospect of being cared for. The effective agent in starting the strike was a fine young fellow named Bracken, who was elected chairman of the strike committee. Bracken's presentation of the men's case to us did credit both to his intelligence and his sympathies. He desired that these young men be restored to the camp strength in the hope that they would mend their ways. If this were done, so far as he was concerned, the strike would be called off. When we offered to meet this condition, Bracken was true to his word. He resigned from the chairmanship of the strike committee, returned to work and started the movement which resulted in the reduction of the number of strikers until only the die-hards were left—about one hundred at January 11 out of a total working force of about sixteen hundred. To-day none of the men remain on strike.

The important fact, however, is that immediately these terms were offered, the real fomenters of the trouble came to the fore. They realized that their object of perpetuating the strike, together with the hope that the example of Dundurn might be followed in other camps, was being thwarted. No concession that could be made, short of handing over the control of the camp to them would have been acceptable. So far as the observance of camp regulations is concerned the records of these men are spotless, apart from their participation in the strike. The congregating of such a large number of men in one camp afforded the most favourable conditions that could be desired, both for the concentration of agitators and the practice of their subtle methods of propaganda. Secondly, from the foregoing facts, it is apparent that large camps increase enormously the difficulties of administration and the exercise of discipline. The teachers of doctrines subversive to discipline have their most susceptible pupils gathered together en masse, and excellent coverage is provided for their protection from

discovery. Had these sixteen hundred men been scattered in ten or twelve camps, either the concentration of agitators would have been avoided or their field of concerted effort restricted to a small area.

Moreover, no police authority is vested in the camp administrators. Dundurn Camp represents an adult male population equivalent to that of a good-sized city, utterly without authority to enforce law. The menace of such a situation is too obvious to need further comment.

2. Irrespective of the source of enquiry, the decided opinion was expressed that a work and wages policy would be infinitely more satisfactory than the present method of supplying food, shelter, medical care and clothing, combined with an allowance of 20c per day. Under such a system the men to all intents and purposes are wards of the State, creating a condition that is in direct contradiction to established Canadian practices and in opposition to the mental make-up of the Canadian people. It is inevitable that such a policy in its practical application would bring into being difficulties of a grave and insurmountable character.

It must be borne in mind, however, that through the violent and prolonged intensity of the depression, both in its national and international character, policies had to be improvised to meet a very pressing need, which, in turn, had to be hammered out on the anvil of practical experience.

*The present camp policy has the following serious objections:—*

(a) A strong body of public opinion exists that is opposed to the principle of the allowance of 20c per day for work performed over a nominal period of eight hours. It might be emphasized that the fact is lost sight of that in addition to food, shelter, clothing and medical attention, tobacco is provided along with canteen supplies at a cost below that paid by the general public outside the camp, and recreation facilities varying in degree according to the size and location of the camp.

(b) It has been stated on numerous occasions during our investigations that many men perform a normal day's work. There is, however, noticed a general slowing up of work on the part of the great majority at an estimated efficiency of not more than 35 per cent of the normal standards.

(c) There are instances of the lack of authority, particularly in the larger camps. The men feel that they are being imposed upon in having to work for an allowance of 20c per day alongside keymen paid a much

higher rate by the Provincial Governments. It was noticed in different camps that men on the 20c per day allowance stayed in the bunkhouses because of adverse weather conditions, whilst the keymen carried out their usual duties.

(d) An adequate supply of warm and serviceable clothing is supplied to each man at an estimated wholesale cost of \$40 per year. The men, moreover, object to being dressed alike. It tends to submerge their individuality, and the opinion was widely expressed that it acted as a deterrent in obtaining employment upon leaving the camps. In this connection it is frankly admitted that glaring abuses exist in the destruction of clothing, particularly by the younger men in camp. A condition has also grown up in which the younger men frequently shift from camp to camp in order to collect new issues of clothing, and in turn, sell them to outside parties. In this matter those in charge are in a wellnigh helpless condition to check the abuse, in view of the necessity of warm clothing for the newly arrived men to go to work. As a means of overcoming the somewhat justifiable objections of the men in this regard and at the same time correcting the obvious abuses that prevail, it is strongly urged that a policy should be adopted that would permit and require the men to purchase their own clothes.

### **The Advantage of a Work and Wages Policy**

(a) The creation of self-respect and the spirit of initiative and individualism among the men of the camps.

(b) The reversal of public opinion towards camps.

(c) The men could meet their day to day obligations in the payment of board, transportation, medical attention, and clothing, which, in the latter case would automatically correct the admitted abuses that now exist.

(d) More work would be accomplished and the undertakings could be run on a sounder economic basis. It should be clearly understood that the tax payers of the Dominion are entitled to value for money expended under a work and wages policy.

We suggest that consideration should be given, if a work and wages policy is inaugurated, to limiting the length of the work period in camps by others than keymen, to a period not exceeding six months in any twelve consecutive months, and the deferment of a specified sum of money from the monthly pay cheque which would be paid to the men on discharge. Such a policy would tend in the first place to permit

the men to seek employment outside of the camps, and the deferred pay would make it possible for them to be self-supporting, at least for some time, providing ordinary caution was used.

The name "Emergency Work Camp" should be substituted for that of Relief Camp. It is admitted that the term "Relief Camp" has a bad psychological effect, and a condition should be created where those engaged in any undertaking might look with some pride upon a constructive effort that has for its purpose the completion of useful public works in an effort by the people of Canada to meet an abnormal unemployment situation.

The policy now in vogue in Alberta, Saskatchewan and Manitoba of placing men in farm work for which a nominal bonus is paid, should be commended. Considered opinion has been expressed that the scheme in its broadest sense is working smoothly. It should be viewed as a constructive approach to a serious problem in the light of practical conditions confronting Western agriculture at the moment. Besides assisting the farmer, it gives those employed the opportunity of gaining a knowledge of the basic industry of the Prairie Provinces, and at the same time supplies the very distinct advantage of home surroundings that is lacking in camp life.

Should a work and wages policy be adopted, due regard should be given to the regulations of camp conditions so that the normal requirements of industry and agriculture may be adequately met.

3. The offices of the Employment Service of Canada afford adequate provision for the re-establishment of relief camp workers in industrial and agricultural employment as opportunity to do so arises. The testimony of the Officers Commanding and Engineers in Military Districts, together with that of camp superintendents and Provincial Officers of the Employment Service of Canada, is that close liaison relations exist between the two services and that willing co-operation is exercised on both sides.

The offices of the Employment Service of Canada fill a real need and perform a worthwhile function in the selection of eligible men for the relief camps, on requisitions from the proper authorities. Moreover, as opportunity affords, the Employment Service offices requisition men from the camps to fill suitable vacancies listed with the offices by employers. The number of men in the various camps is very materially reduced during the spring, summer and fall months. In many camps the strength is reduced until in the summer and early fall very few except the camp staffs and men who are regarded as incapable of doing sustained manual work are left. This result is

very materially aided through the co-operation afforded by the Employment Service. As illustrative of the eagerness of these men to engage in real work, it may be pointed out that many have left camps for farm and lumber camp employment when the remuneration offered was no greater than that provided at the relief camp.

Unfortunately, the requirements of industry for steadily employed labour are inadequate to meet the situation. In the cities and towns, many employers have waiting lists of applicants and do not require the services of public offices except on rare occasions. When vacancies do develop, church, fraternal or individual influence has quite commendably been exerted to secure the hiring of unemployed friends. Consequently, as the records of the Employment Service Branch of the department show, a much smaller proportion of steady industrial placements are now made than under normal conditions. Where such openings do occur, preference is given to heads of families.

The employment conditions which presently prevail militate against any considerable number of relief camp workers being drafted into industrial or agricultural employment except during the periods of peak demand. It is suggested that in the agreements with the Provincial Governments, which no doubt will be entered into in connection with the continuance of the relief camps, a clause might be included which would more definitely tie up, perhaps on a quota basis, the activities of the Employment Service with the available, suitable men in the camps.

4. Having in mind the camps visited during the past several weeks, the members of your committee wish to point out that with few, if any, exceptions, a very definite effort has been made to meet the needs of men in relief camps for education and recreation.

Invariably the recreation hut, usually a large and commodious building, occupies a prominent place at the camp. Roomy, well supplied with tables and benches, equipped with the camp radio, and often housing the canteen in one end, the recreation hall is the rendezvous of the men for periods of relaxation. The supply of used magazines is large and daily papers are provided as well as cards and other games of various kinds. A well-assorted library of two hundred to three hundred and fifty books is invariably in evidence. These books are generally supplied either from local organizations in nearby towns who have interested themselves in the campmen, or more usually are obtained as travelling libraries from the Provincial Departments of Education.

When it is kept in mind that the recreation hall not uncommonly faces on a playing-field with goal posts in evidence, and is often a

close neighbour to the large wash-house having an abundance of hot and cold water, and generally containing from four to six shower baths, we believe that the relief camps as conducted throughout the Dominion show a commendable attempt to promote the social amenities and comforts of camp life. The provisions made in this way will bear favourable comparison with similar conditions found in any camp conducted along regular lines of work.

Indoor recreation is provided and where the physical contour permits open-air sports have been promoted in all the relief camps; hockey and football with teams sometimes playing inter-camp games, have particularly created interest in this direction. It may be questioned if in the smaller sized camps it is necessary to have a man appointed simply to direct athletics or promote recreation. Usually the canteen man, the camp teacher or better still, a committee composed of a few of the men, can arrange satisfactorily for indoor games and open-air activities. A sports committee comprised of camp workers has the further advantage that it provides an outlet to men already in camp who are anxious to promote sports and various games. In the occasional camp, however, where several hundred men are employed, some consideration might be shown toward the appointment of a man who would devote his time exclusively toward the promotion of recreation.

In the matter of education, the Provincial Governments have made a forward move by instituting Correspondence Courses, and in some cases appointing resident teachers, to assist the men in camps who desire to pursue definite courses of study. The necessary text books and the required stationery are provided by the respective provinces. Examination papers duly filled out are forwarded to officials in the Provincial Department of Education to be corrected and returned to the men at the camp. In this way the camp worker may carry on studies in English, arithmetic, book-keeping and even foreign languages.

It is apparent in several camps of British Columbia that while a considerable number of campmen had taken advantage of these courses last winter, there is a very considerable indifference at the present time. This delinquency has been attributed by various camp officials to prevailing rumours and attendant uncertainty as to the immediate future of the relief camps, but another factor, and one not to be overlooked, is that the Department of Education has expressed the intention of assisting all who had already undertaken correspondence courses, while not encouraging additional enrolment of new men.

Speaking of the general standard of education among campmen it should be pointed out that while, naturally, differences prevail as to the individual attainments of the men, yet quite a considerable number of them have attained a fair standard in school studies. Our questions and observations have convinced the members of your committee that a very considerable proportion of the camp workers have at least attained Entrance Standing or Grade VIII.

Not infrequently young men of this standing express the desire to take up electrical work, radio, diesel engineering or even surveying. In view, however, of their lack of the necessary preparation, combined with the fact that unless the camp has several hundred workers these particular groupings will have but few numbers, it is practically impossible to meet such requests. But classes in bookkeeping and study groups in prospecting, particularly where a collection of minerals has been provided, can be conducted without undue pre-requisites.

Neither should it be overlooked that with campmen, possessing a Grade VIII qualification or its equivalent, there is always opportunity to build up six-week courses, calling for definite application and aiming at a fixed goal. Particularly does this apply to instructions covering measurements, excavations, areas of circles, triangles and other problems in mensuration. In classes of this nature care should be taken to apply the problems assigned in a practical way to the local work at the camp. Business College arithmetic also, with practice in the application and use of bank forms, will always provide material for six-week courses of study.

The older men in the camps are not easily enrolled as students—much of life already lies behind them! Too often, also, the older man at a camp is sensitive and not prone to admit any deficiency in his schooling, particularly among youths. Many men, however, of this group, can be interested in general discussions, or informative talks if presented in a practical way—science in some form, events in world history, biography, or the dramatization of a selected passage from literature, will attract and hold interested listeners among the older men.

In common with other camps in Canada, the relief camps are composed of various nationals. Not infrequently seven and eight distinct ethnic groupings will be found in a relief camp of from ninety to one hundred and twenty-five men. These nationals range from English-speaking, French-speaking and Nordic races to the various people of Slavic extraction

A large room is not required for class purposes at a camp. Speaking generally, the recreation room is not a suitable place for a study group. As might be expected, there is, of an evening, much noise and talk among those who go to the recreation hall; the camp radio will be operating and there is always the accompanying shout of those engaged in games. This precludes the necessary quiet for those who wish to study.

The ideal place for those who desire to study in a camp is a small hut, or failing that, a space  $14 \times 18$  feet, partitioned from one of the camp buildings. A room of this size will accommodate fifteen to twenty-two students and provide ample wall space for the blackboard and maps. Above all, it ensures that necessary quiet may be had.

We wish, as already mentioned, to commend heartily the place and the work of the Correspondence Courses. These have proven helpful to men doing more advanced work. But education for the campmen, whether employed at regular work or in relief camps, involves more than the provision of opportunity for study. Some workers in camps with a sense of suspicion look upon schools as simply another agency, in collusion with officials, seeking to keep them docile and submerged.

The failure of campmen to eagerly avail themselves of the facilities for study, so generously provided, may be accounted for in another way. Campmen, whether from the isolation of their work or from whatever reason, are as a class proud and sensitive; they feel frequently a sense of neglect. They will respond, however, to the companionship and counsel of the teacher who is a labourer with them. Camp education can never be limited solely to teaching. The campman will give heed to the man who works alongside him, sharing the common tasks in all kinds of weather, rather than to the man with a staff appointment who does not partake in his work and activities.

It is our observation that such men as we have observed working in this way, call them labourer-teachers, or by any other name, seem to find a response from campmen that is otherwise lacking. To be successful, such a man, ranging in age between twenty-two and thirty years, and a graduate, should enter on his work not simply as a teacher, but as a fashioner of sound and healthy thought among his fellow workers.

In the face of the fact that so many men, many of them young and impressionable, are forced each year to follow the drab life of relief camps, it should be the duty of men, with a University background, to associate

with camp workers, labouring with them in common toil. Such educators, drawn from the various Provinces and employed in a national task, acquire firsthand a truer knowledge of Canadian problems. By their work and effort they not only help to conserve the morale of campmen, but create a healthier relation between the University man himself and the worker.

### General Camp Conditions

5. (a) The meals served in the relief camps are plain, but clean and wholesome. No discrimination is shown in the quality of food provided for the administrative staff. It is the general practice to plan the menu on a weekly basis, which is posted on the wall of the kitchen, and in some cases, displayed for general information in the camp. Cooks in charge of the kitchen staff were found to be generally men of wide experience in camp cooking, and without exception, the kitchens and the dining halls were spotlessly clean. Breakfast consists of cereal, hot cakes, toast or bread and butter, with jam or sauce. Dinner has a fuller course, with soup meat (roasted or stewed), potatoes and one other vegetable, bread and butter, with a pudding or pie for dessert. Tea or coffee is served at all meals. The evening meal is composed generally of warm potatoes, cold meats, fish, bread and butter, cookies or cakes, and stewed fruit for dessert. Cold cabbage, onions, and pickled beets are provided as relishes. Fish is generally served on Friday of each week. Little objection was raised to the food. In some instances, complaint was made on the basis of lack of variety. This is to be expected. It must be remembered that a camp table which necessitates the buying in quantity, precludes the change that can easily be made for a limited group in a family kitchen.

(b) Sleeping accommodation is good. Ample blankets are supplied and sheets and pillow cases are changed weekly. The bunkhouses are clean, warm and comfortable, although improvement might be made in some instances by the insertion of extra windows to permit more light. The coal oil lamps in use at most camps yield a very indifferent light, and it is suggested that consideration might be given to the question of the practicability of installing the Delco or similar lighting system. A departure is being made of erecting the camp buildings in sections so that camps can be moved with less trouble and not much added expense. This also is to be commended and adds to the mobility of the camps as the works are completed, and results in a saving in building materials, it having been found

that the losses are high in the moving of camps of ordinary construction. This, combined with the added time necessary in pulling down and rebuilding on the new site, reflects a decided advantage in favour of the sectional type of hutment.

(c) Facilities for washing clothes are ample, and an adequate supply of hot water is available for this purpose and for the showers used for bathing.

(d) The provisions for medical service are of a satisfactory standard in all camps visited, no complaints being made. There is a ward equipped with necessary emergency medical supplies in every camp with from two to four beds in charge of a certificated first-aid man. In the larger camps a doctor is in residence. In the smaller camps the doctor is always within call and makes two regular visits weekly. Provision is made for hospitalization, and your committee visited some of the men in hospital in a remote district where it was found that they received excellent treatment and attention and were completely satisfied.

(e) A canteen exists in every camp, in which the stock is sold below the cost charged in the stores to the general public. The canteen statements are audited monthly and the profits are used to purchase radios and facilities for recreation. In the larger camps, talking pictures are shown, using up-to-date equipment. In some cases a nominal admission charge of seven cents is made, while in others admission is free. The recreation facilities in these camps are more diversified than in the smaller camps, the men being provided with a large gymnasium. They also have successful teams in local football, hockey, baseball and curling leagues.

(f) The segregation of men according to ages was investigated. Opinions were sought from all sources including Provincial Governments, administration officials and the men themselves. The universal opinion was expressed in opposition to any proposal of segregation upon the basis of age. Experiments have been tried in Alberta and British Columbia by the Provincial Governments along these lines, but were decidedly unsuccessful. It must be remembered that a good cross section of single men representing all ages and temperaments are in the camps. It is also fair to observe that most of the trouble in the camps springs from the younger men, and it has been found from practical experience that the young men work better alongside the older men, who show a steadying effect resulting from the experience that usually only

comes from maturity. Order is essential even in the most elementary associations. The wanton disregard of simple regulations and the interference with the normal life of the older men offers no excuse because of comparative youthfulness.

(g) The Department of National Defence has built up an organization that has been fair to the men under its charge, and efficient in the administration of the various activities in the management of the camps. The work is being carried on in addition to the ordinary departmental duties, assisted by a small civilian staff, reflecting a decided saving to the Exchequer. It should be pointed out that the staff officials of the Department of National Defence, are by training eminently suited to the task of organization work of this character, and in this regard have rendered a distinct service during a most trying time. To brand the camps as military establishments is unfair. In our inspection not the slightest trace of the general conception of military discipline was in evidence. In fact, the officers of the Department of National Defence have leaned backwards in this regard. Not one man was seen in military uniform. Those in the Service whose duties carried them into the camp wore civilian clothes. As far as we could observe, the administration is of a non-political character, a factor of vital importance in an undertaking requiring the utmost discretion if serious trouble is to be avoided. In this connection, if it is thought desirable that some change should be made, consideration might be given to the suggestion that the services of those branches of the Department of National Defence peculiarly suited to camp activities be retained.

(h) There is ample work to be done of a constructive character should financial conditions warrant. Work, however, should be planned on a sound, economic basis in the light of modern practices. One of the most pertinent observations made, arising out of practical experience in camps both in the United States and Canada, was that the men are more contented when machinery is used, and that the progress of the work moves forward in a much more satisfactory manner under these conditions.

All of which is respectfully submitted by your Committee.

(Sgd.) R. A. Rigg

(Sgd.) Humphrey Mitchell

(Sgd.) E. W. Bradwin.

## REVISION OF ONTARIO RELIEF ROLLS

## Statements From Provincial and Federal Ministers Respecting Relief "Check-Up"

EFFECTIVE from January 1, 1936, the Ontario Government has increased its contribution to relief costs from 66½ to 75 per cent, according to a recent announcement by the Hon. David A. Croll, Minister of Welfare and Municipal Affairs.

This action closely followed the decision of the Dominion Government in increasing the Federal monthly relief grant to the province from \$600,000 to \$1,050,000, and is contingent upon the renewal of the Dominion arrangement which extends to March 31, 1936.

The present scale of monthly relief grants made by the Dominion to the provinces is as follows:

Prince Edward Island, \$3,718.75; Nova Scotia, \$70,000; New Brunswick, \$43,750; Quebec, \$875,000; Ontario, \$1,050,000; Manitoba, \$236,250; Saskatchewan \$350,000; Alberta, \$175,000; British Columbia, \$262,500.

In giving notice to the provincial municipalities to revise their relief rolls, the Ontario Minister of Welfare emphasized that the number of relief recipients must be cut to the "legitimate minimum", and, in commenting on the relief situation, declared that: "fraud, laxity and exploitation—the three foes of efficient administration—have been revealed to an extent that demands immediate and decisive action."

Following upon the announcement of the Ontario Minister, the Hon. Norman McL. Rogers, Federal Minister of Labour, issued a statement expressing "very definite satisfaction" at the effort of Ontario's Minister of Public Welfare "to correct grave and regrettable abuses which have developed in the administration of relief by many municipalities in the Province of Ontario", and asserting that "the Dominion will strongly support every constructive effort of the Provinces and municipalities to eliminate every abuse and to insure that not one single dollar of the taxpayers' money is spent on any other than perfectly legitimate cases of need."

The text of the Hon. Mr. Roger's statement is as follows:

"It is gratifying and encouraging to see that the Province of Ontario is making a start in the task of correcting some of the major abuses which have developed in the administration of relief. Mr. Croll has served notice on the municipalities in clear and definite terms that relief rolls must be 'purged of cheaters and exploiters' and the

number of relief recipients reduced to the legitimate minimum. To quote Mr. Croll, municipalities are required 'to slash the cheaters from the roll and defeat the exploiter by refusing partial relief for full-time, underpaid workers.'

"The Dominion Government is wholeheartedly behind Mr. Croll in his effort to correct the regrettable abuses which it has been common knowledge many municipalities have permitted to develop in the administration of relief. The Dominion has for a long time been pressing the provinces to take the necessary measures to have municipalities correct the very evident abuses and unwarranted disparities in their methods of dispensing relief. In this connection it will be recalled that directly following the Dominion-Provincial Conference in December last this Government issued a questionnaire to be forwarded by the provinces to municipalities to show a detailed classification of those on relief rolls. One of the objects sought to be obtained by this classification was the elimination from the rolls of those improperly thereon. Ontario's action is a very definite and laudable effort to co-operate with the Dominion in its desire to see that public money is devoted only to the purposes for which it has been levied. It is to be hoped that all provinces will lose no time in following Ontario's deserving example and in vigorously prosecuting similar measures.

"It is understandable that municipalities, having in mind only the dollar which they collected for relief from their taxpayers, looked upon the two dollars they were receiving from province and Dominion as 'found money', and in some cases have dispensed relief without insuring the safeguards which their responsibility to the public demanded. It is most essential now, when a greater portion of the cost of relief is being assumed by the Provinces and the Dominion, that the strictest care must be exercised by the municipal authorities in the discharge of their responsibilities and Mr. Croll's action is most timely indeed.

"Regarding the action of some employers in using relief assistance as an excuse for underpaying their employees, too strong terms of condemnation cannot be used. Canada has no room for this class of anti-social employer who will so exploit his workers and pervert the taxpayers' money to an end which constitutes a form of unfair competi-

tion,—amounting in a final analysis to unfair governmentally subsidized competition,—with those employers who are endeavouring to conduct their business along ethical lines and to pay their employees fair and reasonable wages in accordance with the laws and practices of this country. To permit such unethical practices to continue would ultimately result in the fair employer either being forced out of business or compelled to adopt

the same reprehensible tactics. All public-minded citizens will welcome any measure which will make such practices impossible.

"It cannot be urged too strongly that those who are receiving relief without justification are bringing discredit upon relief administration generally and are doing great injury to those who are entitled to relief on the basis of unemployment and need in a period of economic dislocation."

## REPORT OF DEPARTMENT OF PENSIONS AND NATIONAL HEALTH, 1934-35

THE Department of Pensions and National Health recently issued its report for the year ending March 31, 1935, giving details of the work of the Pensions Division (dealing with the administration of war pensions, etc.) and of the National Health Division (dealing with the inspection and analysis of food and drugs, the prevention of illegal traffic in narcotics, the supervision of proprietary medicine, public health engineering, etc.).

The records of the Pension Division indicate that at March 31, 1935, the number of disability pensions in force, of all ranks totalled 78,404.

During the fiscal year 1934-1935, the admissions to hospital were 10,150 as against 9,172 in the previous year. The total number who received in-patient treatment was 12,560, as against 11,718 in 1933-34, 13,342 in 1932-33, 14,267 in 1931-32, and 15,519 in 1930-31. Treatments under the out-patients department were 196,951, an increase of 3,563 over the previous year and 13,316 over the year 1932-33.

Of the actual number in hospital on March 31, 1935, 1,617 were in departmental hospitals and 799 were in civil institutions, making a total of 2,416 as against 2,400 in the year previous.

The number of pensioners who have been granted relief was 11,541. Comparison with the three previous fiscal years shows 12,735 in 1933-34, 14,368 in 1932-33, and 12,303 in 1931-32. The orders issued amounted to \$2,042,354, as compared with \$1,912,563 in 1933-34, \$1,978,284 in 1932-33, and \$2,082,052 in 1931-32.

In the Vetract Shops 7 men were admitted and 65 struck off. The number employed on March 31, 1935, was 129.

During the year an arrangement was entered into whereby members of the staffs of the Royal Canadian Mounted Police, and the Department of National Defence are hospitalized by the Pensions Section.

*Pensioners' Workmen's Compensation.*—The provisions under which the department as-

sumes responsibility in respect of accidents sustained by pensioners of 25 per cent and upward while engaged in industry, have been continued by Order in Council to March 31, 1936. During the fiscal year under review, the number of claims was 222, being 42 more than during the previous year. The expenditure, however, was \$23,103, as against \$36,419 during the previous year. In 1932-33 the expenditure was \$17,641, and the number of claims was 179.

*National Health Division.*—The report of the National Health Division gives a comprehensive account of the work involved in analysis of food and drug products. Tabular summaries are given of the results of the examination of the more important foods and the ultimate disposal of imports of food shipments examined.

The Narcotic Branch reports that there has been a marked improvement in the illicit narcotic situation in Canada during 1934. For years past the number of drug addicts has been estimated to approximate 8,000. In last year's report this figure was referred to as being the maximum, with a material reduction during the latter part of 1933. With every regard for caution in relation to excessive claims, it was stated that in all parts of the country, and particularly in the large centres of urban population, there has been a most decided decrease in the number of those addicted to either heroin, morphine or cocaine.

The National Health Division report also reviewed the work of the Public Health Engineering Service (engaged in the protection of the health of tourists and the travelling public) and also the activities of the Marine Hospital Service for sick and injured mariners. During the year this service (administered in conformity with the Canada Shipping Act) collected dues from 2,845 vessels and treatment was given to 7,064 mariners.

## REPORT OF HEALTH INSURANCE COMMITTEE OF BRITISH COLUMBIA

THE report of the Hearings Committee on Health Insurance for British Columbia has been submitted recently to the Provincial Secretary, Hon. G. M. Weir, who appointed this body on July 27, 1935. This Committee's major purpose was "to obtain from interested individuals and organizations their criticism and suggestions" regarding the draft Bill (which had been prepared as a basis of discussion), and to suggest amendments to the proposed enactment "which would make it economically and socially sound and acceptable to the majority of the electorate."

In 1932 the Royal Commission on State Health Insurance and Maternity Benefits—appointed on April 16, 1929, to explore this form of social insurance and its operation in other countries, and investigate the possibility of its introduction into the province—made its final report and recommendations to the Lieutenant-Governor in Council (*LABOUR GAZETTE*, May, 1932, page 521). In this final report, the Commission re-affirmed its belief in the advantages that would result from such a system, emphasizing the importance of maintaining public health by means of a public sickness-prevention service.

The next development was the publication, early in 1935, of a booklet entitled "A Plan of Health Insurance for British Columbia," included in which was the draft Bill, with an explanatory memorandum, for submission to members of the Legislature.

Then, as already mentioned, a Hearings Committee was appointed on July 27, 1935, by the Provincial Secretary to hold public hearings on the proposed health insurance measure. Meetings were held at eighteen different points throughout the province and briefs were presented by 139 interested organizations and individuals. The report of the Committee stated that "with very few exceptions all those appearing favoured the principle of health insurance," with the recommendation that the bill be extended to include all employees, or to include every one in the province.

Representations were also made to the Committee that the cost of the financial burden was too high, while some considered that action should be deferred pending any Dominion study of the problem or until business recovery had made further progress.

On the basis of the representations made, the Committee felt that "there is a basic demand for the early introduction of health insurance," but was of the opinion that the

full plan as outlined in the draft proposal was "too comprehensive and costly for introduction at the present time and should be modified."

Certain amendments to the draft Bill were recommended by the Committee. One of the major modifications was that the compulsory features of the plan should apply to all employees and their dependents with annual incomes of less than \$1,800 a year except agricultural employees. (In the draft bill the compulsory insurance clause applied to all employees with annual incomes under \$2,400). A similar salary maximum is also recommended in respect to voluntarily insured persons. Provision for the medical care of non-contributory persons (indigents) was considered to be the financial responsibility of the province, and the half pay clause (for indigents) was deleted in the revised bill. The report further stated "the principle of free choice of physicians, so far as non-contributory persons (indigents) are concerned must be modified with respect to hospitalization."

*Benefits.*—The Committee recommended that "cash benefits should not be included as a beginning benefit," but that they should be limited to essential medical services as follows:

- (1) The services of physicians.
- (2) Hospital ward care for a minimum of three weeks without charge to the patient or for a longer period if financially feasible.
- (3) Essential diagnostic X-ray and laboratory aids.
- (4) Essential drugs, with the understanding that the Committee approves the payment of more than 25 per cent of the cost by the insured person, if the Health Insurance Commission finds this necessary.
- (5) Such preventive health services, additional to those granted by existing provincial and municipal services, as may be financially practicable, notably periodic health examinations.

Other recommendations under this heading were: that the services of osteopaths and chiropractors should not be included; that benefits should be granted to insured persons one month after contributions are assessed against them; and that existing services of the Provincial Board of Health, such as tuberculosis and venereal disease clinics, should not be interfered with under health insurance. "Nor should the Health Insurance Commission pay out funds for such services as are at

present being provided under governmental auspices, provincial or municipal (except with regard to indigent or non-contributory persons)."

*Method of Assessment.*—The Committee recommended that a flat rate be assessed on all employees receiving less than \$1,000 a year (or \$800 if it is financially feasible), and that employers should be assessed on a flat-rate basis for their employees receiving less than \$1,000 a year (or \$800). For employees receiving in excess of \$800 or \$1,000 a year and less than \$1,800 a year, the Committee recommended that such be assessed at the rate of 2 per cent of their wages and employers at the rate of 1 per cent of their pay-roll for this group.

*Finances.*—With respect to financing, the recommendations of the Committee were:

- (a) The limit of the financial responsibility of the Provincial Government should not be specified in the revised bill.
- (b) The British Columbia Hospital Act should be revised in the light of the changed financial picture of the hospitals resulting from the inauguration of health insurance. The ultimate responsibility of the Province and municipalities for the continued operation of hospitals must be recognized.
- (c) The principle as stated in the present bill of adequate remuneration to physicians and other agents providing services should be fully recognized.

*Care of Children.*—The Committee's attitude with regard to the care of children was expressed as follows:

"The Committee wants to go on record as being strongly in favour of adequate preventive and curative medical care for children. They consider this position is sound not only on humanitarian grounds, but sound on business grounds. Adequate medical care for children will save heavy expenses in later years. They regret that health insurance, particularly if it is not applied to rural communities, will not provide for the treatment of all children in the Province. Accordingly, they recommend that provision be made through the Provincial Board of Health for the care of all children not eligible for health insurance benefits."

*Administration.*—It was recommended that the Commission (administering the Act) be composed preferably of three members, and not more than five, including one representative each of the employers and employees, respectively, with a small technical advisory council, not exceeding six members, one of whom shall be a woman.

In the event of private sickness benefit plans being brought under the jurisdiction of the Commission, the Committee recommended that the income restriction of \$1,800 per year should not apply, but that all members of the private system should be given the opportunity of coming under the provincial plan irrespective of their incomes.

## STATISTICS OF STEAM AND ELECTRIC RAILWAYS IN CANADA, 1934

THE Dominion Bureau of Statistics has recently issued its annual reports on Statistics of Steam Railways of Canada\* and Statistics of Electric Railways of Canada,† both of which cover the year ending December 31, 1934.

### Steam Railways

The report on Statistics of Steam Railways indicates that during 1934 gross revenues of Canadian railways were greater each month than in 1933, and for the year amounted to \$300,837,816, as against \$270,278,276 for 1933; the latter was the low point since 1916. Operating expenses also showed an upward turn, increasing from \$233,133,108 in 1933 to \$251,999,667, and net operating revenues increased from \$37,145,168 in 1933 to \$48,838,149. The balance to the profit and loss account was a debit of \$100,714,746 as against a debit of \$117,339,379 in the preceding year. These include all interest, dividend, and sinking fund charges.

The tonnage of revenue freight increased by 18.6 per cent, including mine products at 28.7 per cent, with bituminous coal at 21 per cent, and ore other than iron and copper at 116 per cent; forest products at nearly 25 per cent;

manufactures, etc., at 22 per cent. Agricultural products showed very little increase. Passenger traffic increased by ten per cent.

"The number of employees increased from 121,923 for 1933, which was the smallest number employed since 1908, to 127,326, or by 4.4 per cent, and the pay roll was increased from \$158,326,445 to \$163,336,635, or by 3.2 per cent. The average wage for those on an hourly basis was 53.1 cents, ranging from 26.3 cents for maintenance of way and structures labourers to \$1.387 for road passenger engineers. Employees on daily, weekly, monthly or annual salaries averaged \$5.216 per day, ranging from \$18.127 for executives, general officers and assistants to \$2.254 for janitors and cleaners and \$2.234 for office boys, messengers, attendants and miscellaneous trades workers. The average number of employees is the average of monthly counts, but the hours worked and the salaries and wages are the totals taken from the pay rolls. Consequently the averages computed from these data are the average wages of full time positions and not the average wages earned by

\* Price 50 cents. † Price 25 cents.

all employees for each class. Thus two men working six months would be shown as one man working one year and the total wages would be divided by one and not by two."

The report contains a table showing by classes of employees the average number employed during the year, the total hours or days on duty, total salaries and wages paid, the average number of hours or days worked per employee in each class or occupation, the average earnings per hour or per day and per year.

The figures as to numbers of employees in each class on hourly or equivalent rates, the average time worked and average earnings per hour and per year were included in the supplement to the January issue of the *LABOUR GAZETTE* on Wages and Hours of Labour in Canada, 1929, 1934 and 1935, Appendix B.

Accidents to passengers included 16 killed and 417 injured. Accidents at highway crossings showed reductions in both the number of killed and injured, 74 and 227 respectively, most of them being motorists.

Fatal accidents to employees numbered 43, affecting 23 trainmen, 9 trackmen, 3 stationmen, 7 shopmen and 1 unclassified. Of these 43 fatalities, 2 were involved in coupling or uncoupling, 3 in collisions, 6 in derailments, 3 in falling from trains or cars, 4 in getting off trains or cars, 17 in being struck by trains, and 8 by unclassified causes.

Non-fatal accidents to employees were 1,119 in number, affecting 938 trainmen, 87 trackmen, 10 switch tenders, etc., 14 stationmen, 31 shopmen, 15 telegraph employees, and 24 employees unclassified. Classified by causes there were 45 due to coupling or uncoupling, 23 to collisions, 34 to derailments, 7 to parting of trains, 2 to locomotives or cars breaking down, 82 to falling from trains or cars, 216 to getting on or off trains or cars, 39 to being struck by trains, etc., 1 to overhead obstructions, with 670 unclassified.

The time absent from work by employees injured increased from 34,539 days in 1933 to 37,437 days in 1934 for injuries received in train accidents and from 86,803 days in 1933 to 110,197 days in 1934 for injuries received in non-train accidents. The average time absent from work for those injured in train accidents was 33 days and for those injured in non-train accidents was 27 days.

The report contains figures for each railway as to capital, receipts, and expenditure, track, equipment, traffic, etc.

### Electric Railways

The annual report on Statistics of Electric Railways of Canada (which included figures for motor buses operated by electric railways) showed an increase in numbers of passengers

carried, the first since 1929, the total being 595,143,903 as against 585,385,094 in 1933. The traffic was still below that for 1932 or for any year since 1913. The changes in the larger cities were as follows: The Montreal system, which carried one-third of the total, showed an increase of less than one per cent, Toronto 2.3 per cent, the British Columbia system (Vancouver, Victoria, New Westminster, etc.) 2.4 per cent, Ottawa 4.5 per cent, Hamilton 4.3 per cent and Edmonton, 6.6 per cent. The decreases in traffic were: Winnipeg 0.6 per cent, Quebec 1.3 per cent, and Calgary 4.9 per cent. The decreases, however, were less than in 1933. Gross revenues showed an improvement for the first time in five years, namely, from \$39,383,965 in 1933 to \$40,048,136 in 1934. Operating expenses increased by only \$119,488 or 0.4 per cent. Only seven railways failed to earn operating expenses as against thirteen in 1933.

The number of employees was 14,544 in 1934 as against 14,883 in 1933, there being 7,808 conductors, motormen and bus operators in 1934 as against 8,098 in 1933. Total salaries and wages were \$18,546,749.55 in 1934 as against \$18,692,236.43 in 1933. Statistics respecting the numbers and wages of various classes of wage earners are shown as follows:—

Maintenance of way, etc.—trackmen, linemen, etc., 1,742, with total wages of \$1,839,856.12.

Maintenance of electric cars—electricians, 73, wages \$96,212.10; other employees, 1,745, wages \$2,103,440.06.

Maintenance of motor bus—coach and truck—motor mechanics, 82, wages \$114,565.03; other employees, 176, wages \$233,902.24.

Motormen, conductors and conductor-motormen, 7,233, wages \$9,072,844.48.

Substation employees, 213, wages \$315,359.43; other power-house employees, 582, wages \$805,389.50.

Motor bus, coach and truck drivers and conductors, 575, wages \$811,378.42.

Accidents to employees were two fatal and 279 non-fatal; to passengers, four fatal and 1,666 non-fatal; to others 49 fatal and 734 non-fatal.

Passenger cars, closed, in service were as follows: two men, 1,683 in 1934 as against 1,715 in 1933 and 2,188 in 1929; one man, 1,543 in 1934 as against 1,472 in 1933 and 1,150 in 1929; either two or one man, 213 in 1934 as against 229 in 1933 and 332 in 1929. All passenger cars were 3,748 in 1934 as against 3,773 in 1933 and 4,183 in 1929. There were 537 buses in 1934 as against 531 in 1933 and 484 in 1929.

Figures are given for each electric railway as to capital, receipts and expenditure, trackage, equipment, traffic, employees, accidents, etc.

## LEGISLATIVE PROPOSALS SUBMITTED BY LABOUR ORGANIZATIONS TO DOMINION GOVERNMENT

**D**URING the past month, the executives of the three central labour bodies representative of the workers of Canada, submitted their proposals for legislative action before the Dominion Government. The Trades and Labour Congress of Canada had its annual hearing before the Dominion Cabinet on January 15, while two days later

the All-Canadian Congress of Labour presented its program. The Confederation of Catholic Workers of Canada held its conference in the office of the Minister of Labour on January 14. The legislative recommendations of all three bodies are presented in summarized form below.

### Trades and Labour Congress of Canada

The memorandum of legislation proposed by the Trades and Labour Congress was presented by President P. M. Draper and supported by approximately 50 delegates. Receiving the delegation were Rt. Hon. W. L. Mackenzie King, Prime Minister; Hon. Norman McL. Rogers, Minister of Labour; Hon. Ernest Lapointe, Minister of Justice; Hon. C. A. Dunning, Minister of Finance; Hon. J. C. Elliott, Postmaster General; Hon. J. P. A. Cardin, Minister of Public Works; Hon. T. A. Crerar, Minister of Mines, Immigration & Colonization, Interior & Indian Affairs; Hon. W. D. Euler, Minister of Trade & Commerce; Hon. Ian Mackenzie, Minister of National Defence; Hon. Fernand Rinfret, Secretary of State; Hon. C. G. Power, Minister of Pensions and National Health; Hon. C. D. Howe, Minister of Railways and Canals and Marine; Hon. J. L. Isley, Minister of National Revenue; Hon. J. E. Michaud, Minister of Fisheries.

#### Unemployment and Relief

The inter-related problems of unemployment and relief were the first to be dealt with in the memorandum. Emphasizing the acuteness of this problem because "about one tenth of our people are dependent upon governments for material support," the Trades and Labour Congress advanced several suggestions for a "broader provision of work." In this respect, a greater financial provision for public works was advocated, particularly in renovation of public buildings, new buildings, and the elimination of level railway crossings. It was important that "where possible the morale of our people should be kept up by giving them an aim in life such as is provided by the sense that their services are entering into the building up of our nation, rather than being allowed to rust out."

**Housing.**—Another factor that was regarded as important in stimulating employment was housing. It was urged that the Housing Act

should be broadened to give more incentive to individuals to own their own homes. "If this were done many jobs would be provided in the construction and allied industries, at little or no cost to the public treasury, while at the same time the number of home owners would be increased, a desirable condition in any country." Supplementary to housing, a slum clearance program, with public assistance, was also advocated.

**Reforestation.**—Attention was drawn to the "national need" for reforestation, and also as a further measure in providing a livelihood for some of the unemployed.

**Relief Camps.**—It was hoped that the recent investigations into relief camps would result in improved conditions, and it was suggested "that the only satisfactory solution of the relief camp problem is to replace these with work schemes at fair rates of pay."

**Hours of Work.**—On the general question of hours, the Congress was convinced that "modern methods of production make possible and necessary a much shorter working day than is now the custom."

It looked "forward hopefully to a maximum working week of thirty hours," and suggested that the government give a lead in this regard by establishing the thirty hour week on public works. In such a reduction of working hours, it was held that the increasing of purchasing power required that there be no reduction in wage levels.

**Unemployed Youth.**—Completion of the training of apprentices whose training had been interrupted was advocated as well as occupational training of youths who had not become established. In this respect the memorandum referred to the "need for technical education grants to be paid under the Vocational Educational Act of 1931, not yet put into operation."

**Transportation of Workers.**—Provision for the transportation of workers to and from

employment at a distance (arranged through public employment offices) was advanced as a factor in lessening the illegal travelling of unemployed and in reducing the number of accidents to transients.

*Relief for the Unemployed.*—Under this heading, the memorandum stated:—"Without knowing fully the duties of the proposed Commission on Employment and Unemployment Relief, we cannot comment intelligently on what may be proposed. We trust that the Commission may be a material aid in advancing ways and means of reabsorbing the unemployed into useful, gainful occupations. We trust, also, that the Commission may standardize relief and so supervise its administration that none in need may be overlooked. However, we are consistently of opinion that, since unemployment is national, relief likewise should be national, and that the Federal Authority should administer all relief."

*Social Insurance.*—In view of the reference to the Supreme Court of the Employment and Social Insurance Act, the Congress confined its observations on the subject to a reiteration of its policy in favour of a national contributory unemployment insurance plan as a modern necessity. It also urged Dominion support to a national system of health insurance. As regards old age pensions, it was suggested that the age limit be reduced to 60 years with retirement of those in industry at 60 years of age.

*Wage Policy.*—It was recommended that the government restore the wages and salaries of its employees to their former levels, and, "as a matter of standing policy, encourage a betterment of wage levels generally in order to increase consumption, build up living standards and eradicate partial relief."

### **British North America Act**

The memorandum again invited consideration of the following suggested amendments to the British North America Act.

1. Ensure full competence of the Federal Government to enact any social and labour legislation affecting Canada as a whole, and particularly that included in the draft conventions and recommendations emanating from the regular and special sessions of the International Labor Office (League of Nations).

2. Permit of control over industrial and commercial activities essential to ensuring observance of proper labour standards and eliminate unfair competition between provinces.

3. To empower the Federal authorities to effectively regulate highway transport and thus eliminate unsafe standards of operation and unfair competition with other established methods of transportation.

4. Restrict powers of the Senate to veto any bill passed at three separate sessions of the House of Commons, which practice is in harmony with that of the British Parliament.

5. Abolish appeals to the Privy Council.

### **Banking and Finance**

Referring to matters in the sphere of banking and finance, the Trades and Labour Congress made the following major recommendations: Control of the Bank of Canada by the Federal Government "to ensure that credit policy may be administered in the interests of the public"; enactment of legislation requiring "that company dividends be permitted only on money actually used as capital"; further preference for wage claims under the Bankruptcy Act; protection of the "right of organization among bank employees under the Industrial Disputes Investigation Act"; further reduction on interest rates, exemption from income tax of sums paid into trade union funds for relief of distressed members.

### **International Peace**

Unqualified support of the League of Nations in the interests of world peace and disarmament was again expressed. In this respect, the Government was also asked to support proposals to secure the nationalization of the manufacture, import or export of war materials.

### **Civil Liberty**

Affirming "its steadfast faith in democracy as a system of government," the Congress deplored dictatorships in other countries, and asked the Government "to take necessary steps to prevent their growth if at any time any faction seeks to implant such political principles in Canada." In "strongly urging" repeal of Section 98 of the Criminal Code, the Congress regarded it "as a threat to the civil liberty which Canadian citizens have inherited as their birthright, and until the Criminal Code is amended to remove those features of this section which curtail freedom of speech and assembly, the liberty of the people of Canada will be subject to the disposition of those enforcing the law." "Definite limits" upon the use of armed force in industrial disputes was also recommended.

### Human Safety

A number of recommendations were presented in regard to safety and accident prevention. Elimination of level crossings was considered the only effective remedy for curtailing motor accidents at such points, but the enactment of a Dominion law compelling motor vehicles to stop at open railway tracks was also urged. Control of commercial motor traffic was again advocated as was also legislation to protect building workers from hot rivets. Enforcement of safety standards at ocean ports, and installation of sprinkler systems in public buildings were other measures advanced.

### Miscellaneous Requests

Among other recommendations were:

Labour representation, chosen in agreement with the Trades and Labour Congress, on all appointed bodies dealing with matters affecting the interests of wage earners.

Proclamation of the amended Canada Shipping Act.

Extension of Fair Wages and Hours of Labour Act to cover crews of ships having contracts with, or subsidized by, the Dominion Government.

Continued strict enforcement of the Immigration Act and regulations respecting contract labour.

Amending the Election Act to provide that ballot papers indicate the political affiliation of the candidates.

Appointment of a Fair Wage Officer for the Maritime provinces.

Favourable consideration of the claims of the blind for pensions.

Extension of Superannuation Act to prevailing rate employees including marine engineers in government service.

Amendment of the Copyright Act prohibiting printing from type not set and plates not made in Canada.

Sales Tax Amendment repealing exemptions given to printing establishments whose annual business does not exceed \$3,000.

Requiring all food containers to be of standard weight and measure.

Revision of Alien Labour Act and its administration placed with a Minister of the Government.

Legalizing of the conducting of sweepstakes under government supervision and control.

Labelling of poisonous materials injurious to the health of workers.

Abolition of all grants for cadet training in Schools.

## All-Canadian Congress of Labour

The All-Canadian Congress of Labour, headed by its President, Mr. A. R. Mosher, and approximately 35 members of its Executive Board, presented its program of proposed legislation to the Dominion Cabinet on January 17. Included in the delegation were three representatives of the Confederation of Catholic Workers associated in certain joint representations with the All-Canadian Congress. The members of the Cabinet who received the delegation were: Rt. Hon. W. L. Mackenzie King, Prime Minister; Hon. T. A. Crerar; Hon. Ernest Lapointe; Hon. Norman McL. Rogers; Hon. C. A. Dunning; Hon. J. C. Elliott; Hon. Fernand Rinfret; Hon. Ian Mackenzie; Hon. C. G. Power; Hon. J. E. Michaud.

In its preface, the memorandum "welcomed the government's assurance" in regarding the solution of the problem of unemployment and distress as the supreme and immediate task. It also considered as "encouraging indications" the government's "declaration against amalgamation of transportation and communication services," and the expressed intention to demilitarize the control of relief camps and to repeal Section 98 of the Criminal Code.

Continuing, the memorandum stated: "In view of the explanations that have been made

respecting the suspension of the various measures of social reform placed on the statutes by Parliament last year, the Congress accepts the Government's assurance that the attitude taken is not a negative one, and it trusts that should an opinion be expressed by the Supreme Court that any of these laws are *ultra vires* of the Dominion Parliament, steps will be taken immediately so to amend the British North America Act as to confer full authority upon the Dominion in matters of this nature." In any event, the All-Canadian Congress hoped that reforms promised to Canadian workers in the various enactments (referred to the Supreme Court) would be secured.

*Diminution of Unemployment.*—The views of the All-Canadian Congress on the unemployment problem were as follows:

"The Congress submits that, while questions concerning the relief of the unemployed may be advantageously considered by the advisory commission which the Government proposes to establish, the problem of liquidating unemployment, as distinguished from the administration of relief, should be the immediate concern of the Government itself. It is convinced that, though industrial recovery may

result in a marked diminution in the number of jobless workers, the attainment of the level of production of the decade preceding 1930 will not raise employment to the level of those times. The continuance of technical development during the slump has, in the view of competent economists and statisticians, by increasing the productive capacity of industry, lessened the need for labour, and the margin of permanently displaced workers is steadily widening. Many workers were unemployed in the peak years 1928 and 1929. Believing that there will still be unemployment when all the contemplated conventional reforms have been carried out, the All-Canadian Congress of Labour is of the opinion that every plan for the rehabilitation of the unemployed and for the ultimate liquidation of unemployment should look to the provision of the necessities and comforts of life by the labour of those who need them. The labour and the materials being available, the problem of producing and distributing food, clothing, and shelter would appear to be mainly one of organization."

*Housing and Public Works.*—Among alternative measures for the relief of unemployment the All-Canadian Congress recommended house building and slum clearance "on a much more extensive scale than has yet been attempted." It believed, that, if the acquisition of a new and modern dwelling were made economically possible for the citizen of average income, work would be provided in almost every industry for a vast number of unemployed. In addition to the adoption of a housing and slum-clearance scheme the Government was urged to continue and to extend its program of public works. The Congress was "convinced that building construction and slum clearance should be undertaken on a national scale both to relieve unemployment and to remedy a building deficit which has become a reproach to a progressive country."

*Hours and Wages.*—The progressive reduction of working hours in industry was also recommended as a measure to reduce unemployment. The Congress hoped that means would be found to implement the ratification of the International Convention for the 48-Hour Week and that this step would lead to a limitation of working hours "more consistent with recent developments in the productivity of industry and universally applicable." It was also urged that reduction of working hours should contain a proviso that no such reduction should operate to reduce the weekly earnings of the workers.

The Congress further recommended that, as soon as the authority of Parliament in matters of social legislation is established, a

minimum wage law applicable throughout the Dominion be enacted, and "should be based upon the cost of an adequate standard of living, and above that standard there should be established minimum rates for the various occupations, with due regard to the nature of the work in each". Similarly, the general maximum working week "should allow ample leisure for all workers, and hours should be progressively shortened, below that maximum, according to the ability of industries to increase their payrolls by absorbing more workers".

*The Labour Market.*—Under this heading, the memorandum devoted particular attention to what was considered as "one of the greatest causes of distress among the workers of Canada", viz.—"inequality of bargaining power between the workers and the employers in the labour market, an inequality which has been increased by factors other than those of a strictly economic nature and which are in a great degree artificial and removable." The memorandum, referring to the report of the Royal Commission on Price Spreads, declared that "every employer is in the position of a mass buyer in dealing with workers" whereas "the workers have to sell their labour in a glutted market." It was regarded as "imperative" that this "disadvantage" of the worker should be reduced by statutory action.

*Freedom of Association.*—While recognizing that the workers "in their fight for the right to organize and bargain collectively" had received some legislative assistance through the Trade Unions Act, the Conciliation and Labour Act, and the Industrial Disputes Investigation Act, yet it was submitted "that the right to join a labour organization should be definitely established by legislation, and that penalties should be provided for interference with the exercise of that right."

*Industrial Disputes Investigation Act.*—The Congress reiterated its request for the repeal of clause 2 of Section 17, of the Industrial Disputes Investigation Act. Inserted in 1920, this Clause is regarded by the All-Canadian Congress as "permitting the imposition of closed shop conditions under an open shop agreement".

*Labour Representation.*—The memorandum, quoting a ruling of the Permanent Court of International Justice, urged that the appointment of Canadian workers' delegates and advisers to the International Labour Conference be made in conformity with Article 389 of the Treaty of Versailles; and also that "no workers' delegate or adviser shall be selected

without prior consultation with the All-Canadian Congress of Labour and such other organizations as are deemed qualified under the Treaty."

The Government was also requested to "consult the Canadian unions in making appointments to such boards, commissions, and delegations as usually include representatives of the workers." (The Confederation of Catholic Workers of Canada associated itself with the All-Canadian Congress of Labour in this part of the memorandum.)

Among other recommendations contained in the memorandum were:

Rescinding alleged "special privileges" enjoyed by "foreign-controlled organizations" under the Foreign Insurance Companies Act.

Amendment of Section 501 of the Criminal Code to prevent picketing where no industrial

dispute exists. (It was claimed that "a new form of intimidation" had developed, involving "the picketing by members of one union of premises in which members of another union are engaged".)

Restoring effective registration of union labels by amendment to the Copyright Act.

Putting into effect the 1933 and 1934 amendments to the Canada Shipping Act, and developing the shipping industry by a further amendment restricting the coast-wise trade of Canada to British ships of Canadian registry.

Restoration of the civil service salary deduction.

Endorsation of recommendations of Committee on Transport at Dominion-Provincial Conference.

Enactment of legislation providing for pensions for the blind.

### Confederation of Catholic Workers of Canada

The Honourable Norman McL. Rogers, Minister of Labour, received in the Department of Labour on Tuesday, January 14th, a delegation from the Confederation of Catholic Workers of Canada, Incorporated, who presented a number of proposals relative to labour and social matters for the consideration of the Government. The Minister of Labour was accompanied by Hon. Ernest Lapointe, Minister of Justice; Hon. P. J. A. Cardin, Minister of Public Works; Honourable Fernand Rinfret, Secretary of State; and Hon. C. G. Power, Minister of Pensions and National Health.

Among those in the delegation from the Confederation of Catholic Workers of Canada were: Mr. Alfred Charpentier of Montreal, President of the Confederation; Mr. Henri Quevillon of Hull, 1st Vice-President; Mr. Emile Tellier of Three Rivers, 2nd Vice-President; Mr. Gerard Picard of Quebec City, General Secretary for Quebec Province; Mr. J. T. Robitaille of Quebec, Director; Mr. Alphonse Bourdon of Montreal, Director; Mr. Maurice Doran of Hull, Business Agent; Father Georges Cote of Quebec, General Chaplain; Rev. Father Leo Paul Gratton, O.M.I., Chaplain for the Syndicate of Hull; Mr. Jean Yves Boulay, General Secretary of the Hull syndicates; Mr. Osias Filion of Montreal, President of the Building Trades; and Mr. Charles Paquet of Montreal, President of the Federation of Printers.

The Minister of Labour, on behalf of the Government, extended a welcome to the delegation and at the close intimated that sympathetic consideration would be given by the Government to the representations which had been submitted.

In commencing, the memorandum of the Confederation of Catholic workers of Canada dealt with certain phases of the Report of the Royal Commission on Price Spreads, drawing attention particularly to the recommendation urging more adequate recognition of trade unions, both by the Government and employers, and the right of employees to organize without interference, and collective negotiations of wage contracts.

The memorandum also referred to the Price Spreads Commission's recommendation for increased penalties for violation of minimum wages Acts, and the abolition of "exceptional conditions."

Reviewing the social legislation of the last parliamentary session, the Confederation approved the principles of the social measures adopted and which have since been referred to the Supreme Court.

The Confederation acknowledged the good results of the Dominion-Provincial Conference and particularly commended the establishment of a Dominion Commission on Unemployment and Relief.

Among the other recommendations of the Confederation were the following:—

Counter-action against communistic propaganda by the strict enforcement of section 98 of the Criminal Code of Canada, and by the adoption of fair labour laws.

Enactment of legislation to protect those formerly unemployed against seizure of their property immediately upon securing employment.

Prohibiting tourists from any commercial activities under the Reciprocity Treaty.

Special protection to shoe manufacturers paying reasonable wages and insistence upon the union label on shoes supplied under Government contract.

Permitting those in concentration camps to exercise their franchise at their respective centres.

Continuance of the tariff on imported gloves in order to protect employees in the industry.

Assisting the Canadian printing industry by the prohibition of the importation of mats and electros.

Restoring the half-cent postage rate on circulars.

Imposing of heavy penalties in cases of illegal bankruptcy and the prevention in such cases of the resumption of business activity withing a certain period.

Abolition of night work in the baking industry.

Establishing a licensing system through the Dominion Trade and Industry Commission for all industries.

Publication of more complete cost of living statistics.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Labour Conference of North and South American States

A CONFERENCE of American states which are members of the International Labour Organization—the first of its kind since the foundation of the International Labour Organization—was held in Santiago de Chile from January 2 to 14, 1936, on the invitation of the Government of Chile, in order to meet a wish which had frequently been expressed in the International Labour Conference that, without detracting from the universal character and scope of the Organization, arrangements should be made whereby problems of special interest in certain parts of the world might be studied in the light of conditions prevailing in those regions.

The special labour conditions in Latin American countries and the great interest which these countries had recently shown in labour legislation made it fitting that the first regional conference of the I.L.O. should be held in the New World. During the last two years, of the 109 ratifications of Conventions registered at Geneva from all over the world, 73 (or almost 70 per cent) have come from the Americas.

Not only was the Conference the first at which representatives of Governments, employers and workers of the American continent had met to consider their social and labour problems, but it was the first occasion on which all the States of the New World had met together in any conference.

All of the countries of America belonging to the International Labour Organization were invited to send representatives on behalf of their governments and also on behalf of employers and workpeople. Delegations were present from the following countries: Argentina, Bolivia, Brazil, Canada, Colombia, Chile, Cuba, the Dominican Republic, Ecuador, Haiti, Mexico, Nicaragua, Panama, Paraguay, Peru, the United States, Uruguay and Venezuela. An observer was present from Costa Rica, which is not a member of the International Labour Organization.

Canada was represented by Dr. W. A. Riddell, Canadian Advisory Officer to the League of Nations, Geneva (who also represented the Governing Body of the I.L.O.), and by Mr. M. J. Vechsler, Canadian Trade Commissioner at Lima, Peru.

The Agenda of the Conference was divided into two parts. The first consisted of the examination of the question of the ratification and application of Conventions and Recommendations, more especially those dealing with social insurance and women and children. The second part contained a list of items which had been submitted to the Governing Body by the American States. These included the questions of nutrition, minimum wages, living and working conditions of agricultural workers, labour inspection of the textile industry, and the age of admission of children to employment. A number of resolutions were adopted covering these subjects, with special reference to American conditions. These resolutions will be submitted to the Governing Body, which will decide on the appropriate action to be taken in connection with each. Some of the questions dealt with will eventually be placed on the Agenda of the International Labour Conference.

Fifteen resolutions in all were submitted by delegates in attendance at the Conference, including one proposing the adoption of a draft convention or recommendation containing principles to govern migration and colonization from Europe to America (proposed by Argentina), another on indigenous populations (proposed by Peru), another on unemployment and placing (Argentina), another on freedom of association (the Workers' Group), another on the truck system (Argentina), and others on the relations between the International Labour Office and America.

Resolutions were adopted with special reference to the ratification and application of draft conventions by American states and the establishment in each country of technical research

bodies and administrative machinery. The resolution regarding migration as approved asked that special enquiries should be made with regard to migration from Europe to America and that this subject should be inscribed on the agenda of the International Labour Conference at an early date. Other resolutions adopted proposed the holding of periodical conferences in the future on the lines of the meeting in Santiago, increased representation for American States on the technical committees of the International Labour Organization and on the staff of the International Labour Office, enquiries by the I. L. O. into problems of special interest in American countries, and the international regulation of social insurance.

The Foreign Minister of Chile, in welcoming the delegates, particularly mentioned the delegation from Canada. He made special reference to the fact that Canada was for the first time taking part in a meeting of Pan-American scope, and said: "The peoples of America base their highest hopes on Canada's co-operation and welcome her delegation to this family gathering." Dr. Riddell, as Chairman of the Governing Body of the International Labour Organization and head of the Canadian Delegation thanked the Foreign Minister for his kind words in reference to Canada and her participation, along with other States Members of the International Labour Organization, in the first regional labour conference to be held in the New World.

A splendid welcome was also extended by President Sarrino, Chilean Minister of Labour, to the Canadian delegation at the conference and a letter in the terms following has been received by His Excellency the Governor General of Canada since the conclusion of the Conference:—

"The Labour Conference of American States which are Members of the International Labour Organization, consisting of Delegates of Governments, Employers and Workers, has decided to send, in a spirit of American Fraternity, cordial greetings to the Heads of the various States of America, and, through them, to all the people of the Continent.

"As President of the Labour Conference of American States which are members of the International Labour Organization, I have the honour to convey to you these greetings, which are animated by a profound feeling of solidarity, and I venture to request you to communicate them to the entire people of your country."

### Labour Statistics

The Committee of Statistical Experts of the International Labour Office recently met at Geneva, and considered two important ques-

tions: (a) the methods which should be employed in the compilation of statistics designed to indicate the relative levels of rents in different towns and countries; and (b) the possibility of including in the agenda of the 1937 session of the International Labour Conference a draft Convention relating to labour statistics.

With respect to the first question, that of rents, the Committee recommended that in collecting statistics for use as a basis of comparison, information should be obtained which would allow the chief types of dwellings in each town to be classified both according to the general standard of their accommodation and also according to the number and size of the rooms, and that index numbers should be compiled showing the relative levels of rents, both per room and per square metre, for each of these types of dwellings in the various towns.

With regard to improving the comparability of labour statistics, the Committee of Experts recommended that the Governing Body of the International Labour Office should place the question of the adoption of an international Convention on the subject on the agenda of the 1937 Session of the International Labour Conference. The Committee considered that, as a first step, proposals for a draft Convention should be restricted to statistics of wages and hours of work.

The Committee made a number of suggestions as to the points which might advantageously be included in a Convention of this nature, and recommended that the preliminary draft prepared with a view to such a Convention should be referred for consideration to an international conference of labour statisticians before coming up for discussion at the International Labour Conference.

The annual report of the Canadian National Institute for the Blind, recently published, covers the activities of that body during the year ended March 31, 1935. The report of the managing director, Capt. E. A. Baker, O.B.E., was a comprehensive review of the problems of the blind in their relationship to the state and industry with particular reference to the question of parliamentary action on pensions. Legislation providing some form of state aid for blind Canadians was anticipated in 1936. The report of the placement department indicated that 176 persons found employment through this department during the year, with total earnings of approximately \$113,933.09.

## ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1935

THE Dominion Bureau of Statistics recently issued an Annual Review of Building Permits issued by 58\* cities in Canada in 1935, with comparative data for the years 1920-1934. The report, containing charts and numerous tables, presents full information as to the extent of building activities throughout the Dominion, statistics being shown for building activities by provinces and cities and by types of buildings. Some paragraphs from the report are as follows:

The moderate recovery in building activity indicated by the value of building authorizations in leading cities during 1934 continued in evidence during 1935, when the improvement over the preceding year was generally more pronounced than that noted in 1934 as compared with 1933, however, construction work generally continued at a low level as compared with most years of the record. The permits for construction taken out in 1935 represented building valued at \$46,560,623, an increase of \$19,103,099 or 69.6 per cent over the 1934 total of \$27,457,524, while as compared with 1933 and 1932 there were increases of 113.8 per cent and 10.0 per cent, respectively. In 1935, the program of public works construction undertaken by the government was a factor of importance in stimulating building activity, but other classes of construction also reported improvement as compared with 1934.

Although the value of building authorized by leading cities last year was higher than in 1934, 1933 or 1932, the 1935 aggregate was considerably lower than in any of the years 1920-1931. On the average, the value of the building permits issued in the preceding fifteen years for which data are available was \$128,-824,652, of which the 1935 authorizations constituted only 36 per cent. The wholesale prices of building materials during 1935 averaged practically the same as in 1934; though the average was slightly higher than in the years 1933-31, it was decidedly lower than in any other year since 1920. The average index number of wholesale prices of construction materials, as compiled in the Internal Trade Branch of the Bureau on the 1926 average as 100, stood at 82.2 in 1935, compared with 82.6 in 1934, but with an average of 100.0 in the years 1920-1934. Labour costs showed an in-

crease in 1935, according to the Labour Department's index of wage rates in the building trades, based on the 1913 average as 100. This index was 159.8 for the year under review, compared with 154.8 in 1934, 158.0 in 1933, 178.2 in 1932, 195.7 in 1931 and 203.2 in 1930, the maximum in the sixteen years for which building permit figures are available for the 58 centres.

The MacLean Building Review makes a monthly tabulation of the value of construction contracts awarded throughout the Dominion; during 1935, these totalled \$160,-305,000, compared with \$125,811,500 in 1934, \$97,289,800 in 1933, \$132,872,400 in 1932, \$315,-482,000 in 1931, \$456,999,600 in 1930, \$576,651,-800 in 1929, \$472,032,600 in 1928, \$418,951,600 in 1927, \$372,947,900 in 1926 and \$297,973,000 in 1925. There was, therefore, an increase of 27.4 per cent in 1935 as compared with the preceding year, while the 1935 total was also higher than that for 1933 or 1932. The value of the building permits issued in the 58 cities in 1935 constituted 29.0 per cent of the total value of construction contracts awarded throughout the Dominion, while in 1934 this proportion was 21.8 per cent and in 1933, 22.4 per cent. The percentages in these three years were lower than in any other of the sixteen years for which figures for the 58 cities are available. In 1921, when these cities reported their highest proportion of total building work in the country, the percentage was 48.6, while the average ratio in the years 1920-1935 was 40.8 per cent.

Cities in each of the nine provinces, with the exception of New Brunswick, showed increases in the value of the building permits issued as compared with 1934; the largest gain was in Ontario, where the 1935 authorizations were higher by \$9,496,156 or 66.2 per cent. The greatest proportionate increase was in Manitoba, where authorizations were taken out for building valued at \$2,945,175, as compared with \$833,048 in 1934. In New Brunswick, the permits issued declined in value from \$1,277,333 in 1934, to \$265,115 in 1935 or by 79.2 per cent.

Some 53 cities furnished detailed statements showing that they had issued nearly 3,600 permits for dwellings estimated to cost about \$10,911,000 and approximately 15,000 permits for other buildings at a proposed cost of almost \$30,000,000, while engineering projects valued at about \$506,000 were also reported during 1935. The average estimated cost per dwelling was therefore approximately \$3,039, while the average for other buildings

\* The amalgamation of East Windsor, Sandwich, and Walkerville with Windsor in 1935 reduced the number of cities covered in the report from 61 to 58 without affecting the area included therein.

was about \$2,000. The former category includes houses and apartments, and in many but not all cases, repairs and alterations. Permits for garages usually constitute a large proportion of the total number of buildings other than residential, but in most cases have a low valuation. During 1934, nearly 2,580 permits were granted for dwellings at a proposed cost of \$8,590,000, an average of \$3,334; some 13,700 permits were also issued for other buildings valued at \$14,407,000, giving a mean of not quite \$1,051 per building. There were also engineering projects undertaken, valued at about \$555,000.

The value of the residential building authorized in Charlottetown, Halifax, Sydney, Saint John, Quebec, Montreal, Shawinigan Falls, Sherbrooke, Brantford, Fort William, Galt,

Guelph, Hamilton, Kingston, Kitchener, Niagara Falls, Oshawa, Ottawa, Peterborough, Port Arthur, St. Catharines, Sarnia, Sault Ste. Marie, Toronto, York, and East York Townships, Windsor, Woodstock, Winnipeg, Moose Jaw, Regina, Saskatoon, Lethbridge, Nanaimo, New Westminster, Prince Rupert, and Vancouver was higher in 1935 than in the preceding year.

Work was also undertaken during 1935 in some cities in connection with roads, sewers, etc., for the relief of unemployment, in addition to that carried on in the ordinary routine of city maintenance and improvement. Such projects in most cases do not require a permit, and their value is therefore not included in this record.

## UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1935

THE Department of Labour receives each month reports from local trade unions throughout Canada recording their membership on the last day of the month, and also the number of members without work, a compilation of these returns affording an index for unemployment among organized workers from month to month. On an average during the year 1935 there were 1,748 labour organizations forwarding reports to the Department each month, embracing an average monthly membership of 164,909 persons, 15.4 per cent of whom were on an average unemployed. This percentage for 1935 was the lowest which has been registered in any year of our records since 1930.

Labour conditions in Canada took a more definite turn for the better during the year 1935, furthering the employment recovery of 1934 and the latter part of 1933. The month of September, with 13.0 per cent of idleness recorded, marked the peak of activity for the year and the best situation which has obtained in any month since October, 1930. Unemployment was at its greatest prevalence in February when 18.2 per cent of the members indicated were without work. In each month throughout the year, however, the situation remained more favourable than in the corresponding month in 1934, 1933 or 1932.

The manufacturing industries, with the exception of the months of May and August, reported a higher level of employment each month than in 1934, the drop in activity in these two months being very slight and caused to a considerable extent by dullness in clothing establishments. Employment in the garment trades fluctuated considerably during

1935, January, May and August showing the greatest increases in slackness over the corresponding months of 1934, though in February, March and June also, activity was retarded. In April, however, there was some pick-up in available work, July, in addition also showing noteworthy gains, while from September to the close of the year there was an appreciable betterment in the situation from the same period in 1934. In the iron and steel trades steady and unbroken employment advancement was reflected throughout the year when compared with 1934, the situation in November showing the most pronounced improvement. Activity in the pulp and paper industry was, for the most part, maintained at a higher level during 1935 than in the previous year, April and May being the only months to show a slowing up in available work, while in the other months the gains noted were considerable. In the wood products division curtailment of employment was evident in the first four months of the year, followed by a period of marked expansion which extended to the close of October, while in November the situation was more depressed than in the corresponding month of 1934. The favourable movement, however, was resumed in December to a quite pronounced degree. Recovery of substantial proportions was apparent in the building and construction trades during 1935, all months showing a greater employment prevalence than in 1934, which was more particularly evident from early summer onward. In transportation, also, a better level of activity was manifest throughout the year, navigation workers showing retarded activity in several months, though on the whole they were con-

siderably better engaged, while in steam railway operation consistent expansion was noted. The mining situation was rather better than in 1934, February, August and December being the only months to record curtailment in employment afforded, and this was slight. Retail trade showed a less favourable employment tendency in the early months of the year when compared with 1934, but from September the situation improved steadily to the close of December. Communication workers were afforded a greater volume of employment each month than in the corresponding month of 1934. Services indicated varying conditions during the year, the first and last quarters particularly showing increased employment. Fishermen who suffered large declines in activity during the first four months of the year showed sharp recovery during May, and this improvement continued to the close of the year, the situation being considerably better from August onward. Conditions for lumber workers and loggers showed some fluctuation during 1935, the first part of the year reflecting marked increases in slackness, with varying trends during the early spring and summer, while from August to the end of the year large increases in available work were reflected.

The level of activity during January and February of the year under survey remained much the same as at the close of December, 1934, what nominal change was noted being in an unfavourable direction. Retarded activity

in coal mining and in the building and construction trades during these two months which was about counteracted by the improvement evident in the majority of trades accounted for this tendency toward reduced activity. In March employment was in somewhat greater volume than in February, the manufacturing industries, particularly the garment trades, and building and construction operations affording a considerably better volume of work. Contrary to the improvement recorded during March activity again tended downward in April though the change was slight, coal mining in Alberta, and the pulp and paper industry in New Brunswick showing slacker conditions while the gains reported elsewhere, though not outstanding, when combined largely offset these recessions. From May, however, there was continued and general improvement manifest month by month until the close of September. A slight tendency toward retarded activity was indicated during October from the preceding month, and in November the situation remained unchanged from October, minor increases and decreases in employment in the various groups of industries offsetting each other. Due to seasonal influences unemployment during December showed some increase over the previous month, a number of firms at the close of the year taking advantage of the lull following the holiday period for stock-taking and inventory purposes.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1935

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1935, was less in volume than during the corresponding quarter of 1934, as there was shown a decrease of 6 per cent both in vacancies offered and placements effected. An analysis of the different industries showed declines were registered in both instances in construction and maintenance where considerably less relief work had been carried on by the federal and provincial governments, and in logging, transportation and mining. Gains under each comparison were registered in services, farming, manufacturing and trade, a number of placements in farming being those made under the Farm Labour Relief Scheme. Provincially, Manitoba, Quebec, Alberta and New Brunswick recorded increased vacancies and placements, but the remaining provinces reported declines, Manitoba showing the

highest gain and Ontario the greatest loss.

From the chart which accompanies the article on the work of the Employment Service for the month of December it will be seen that the curves of vacancies and placements in relation to applications pursued a downward trend until the middle of November. From then on to the end of the quarter the course followed was upward, although at the close of December, 1935, the levels attained were over 11 points lower than those shown at the end of December, 1934. During the period October to December, 1935, there was a ratio of 53.4 vacancies and 50.9 placements for each 100 applications for employment as compared with 60.9 vacancies and 57.8 placements during the corresponding period of 1934.

The average number of positions offered daily during the quarter under review was 1,282, of applications registered 2,399 and of

placements effected 1,220, in contrast with a daily average of 1,350 vacancies, 2,218 applications and 1,283 placements in regular and casual employment during the last quarter of 1934.

During the three months October to December, 1935, the offices reported that they had made 97,510 references of persons to

positions and had effected a total of 92,716 placements, of which 63,016 were in regular employment and 29,700 in casual work. Of the placements in regular employment 50,007 were of men and 13,009 of women, while casual work was found for 20,079 men and 9,621 women. Comparison with the same period in 1934 showed that 98,754 placements

## VACANCIES AND PLACEMENTS OF THE EMPLOYMENT

were then made, of which 54,834 were in regular employment and 43,920 in casual work. Applications for employment during the period under review were received from 141,765 men and 40,551 women, a total of 182,316, in contrast with the registration of 170,734 persons during the same period of 1934. Employers notified the Service during

October to December, 1935, of 97,373 vacancies, of which 70,855 were for men and 26,518 for women, as compared with 103,928 opportunities for work during the corresponding period of 1934. A report in detail of the transactions of the Employment Service for the month of December, 1935, will be found on page 180.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1936

### Reports of Superintendents of the Employment Service of Canada

The employment situation at the end of January, 1936, was reported by the superintendents of the Employment Service to be as follows:—

Farming and logging both were quiet in the Maritime Provinces, but fishing was reported as showing some increase over that of the previous weeks. Coal mines in the New Glasgow area operated from two to five days per week, while those in Cape Breton and vicinity also worked the same length of time, except for one mine which was idle all week. Manufacturing showed little variation, with no likelihood of any increase in the volume of business until spring activities commence. No idleness was reported in the iron and steel groups. Trade was fair. Requests for housemaids and charworkers were numerous in the Women's Division, with applicants plentiful.

Little activity was shown in farming in the Province of Quebec, except in the vicinity of Sherbrooke, where a number of farm hands had been sent to the Department of Colonization. Curtailment in the placement of workers in the logging camps was reported from all centres, as the cutting period was practically over. Mining was quiet. Manufacturing showed some decline, especially at Hull, with conditions only fair throughout the province. In spite of unfavourable weather building construction showed improvement at Hull. In localities where there were few vacancies for building labourers, large numbers of men found employment in snow removal. Transportation was satisfactory, but trade was less active. Many orders for domestics were received in the Women's Division and a large number of placements was made.

The demand for farm help continued, light in Ontario, few men applying for this kind of work. As cutting was almost completed, many logging operators had reduced their staffs, present activity in the camps being almost solely confined to hauling. Some requests had been received for teamsters, and these were easily met. Mining was quiet, except at Timmins, where the industry remained steady. The general outlook in manufacturing continued encouraging, with improvement maintained in production and staff levels. Although there was still a large number of unemployed, the registration in several centres was gradually decreasing, and slackness, which prevailed in a few lines, was seasonal only

while more employees expected to be recalled soon. Other than alterations, repair jobs and Dominion Government work, little building construction was in evidence. Highway construction also had been slack, owing to winter conditions, but maintenance work on roads, streets and railways provided employment for many men as snow shovellers. Relief work on civic improvements also continued in some districts. There was a fair number of orders for household service in the Women's Division, but nearly all employers were seeking experienced help, and were offering rather low wages, thus it was somewhat difficult to fill these positions. Very little work was available for industrial or clerical female workers.

Severe weather conditions had lessened the call for farm hands in the Prairie Provinces. Logging was dull, except at Edmonton, where the demand for bushmen was good, due to the fact that many of the operators were paying a straight wage, with fares advanced. Mines at Estevan and Edmonton were busy, but, elsewhere, somewhat quiet. Manufacturing at Winnipeg was active, but in other centres no improvement was noted. Building construction was slack, nearly all work in progress being confined to relief undertakings. Trade was quieter, with collections slow. Fewer orders were received in the Women's Division, while applicants were more numerous.

Farming showed practically no change in British Columbia and little help was asked for in the orchards, owing to the wet weather. Packing houses were still busy, however, packing and shipping. Logging was active, but with no demand for additional labour. Saw and shingle mills were operating fairly steadily. Mining reports varied:—at Prince Rupert, the outlook for the coming year was very good and at Nanaimo, local mines worked full time, while at Kamloops, Penticton and Vancouver, conditions were not so favourable. Fair catches of spring salmon and herring were made in the harbour at Prince Rupert. Construction was quiet except for relief projects. Drydock and shipyards were quite active at Prince Rupert and Victoria, but waterfront work was slack at Prince Rupert, fair at Vancouver and good at Victoria. Trade showed little change. A decrease was shown in requests for women domestics, with sufficient applicants listed, although many of these were handicapped by lack of experience.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1 was 9,409, the employees on their payrolls numbering 933,107 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,807, having an aggregate membership of 170,503 persons, 14.6 per cent

of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of January, 1936, as Reported by the Employers

Data tabulated by the Dominion Bureau of Statistics show that industrial activity in the last fifteen years has invariably declined at the first of January, there being an average decrease of about seven points in the crude index of employment from December 1 to January 1 in the years 1921-1935. The customary contraction was indicated at the opening of the present year, but on the whole this involved a smaller-than-average number of workers. The persons released from the staffs of the 9,409 firms co-operating at January 1, 1936, numbered 52,374, or about 90 per cent of the average for the years since 1920; the reported payrolls were reduced from 985,481 at December 1, 1935, to 933,107 at the date under review, or by 5.3 per cent. This decline, however, exceeded that recorded at January 1 last year, when there had been a falling off of 4.4 per cent from the preceding month.

The crude index for January 1, 1936 (based on the 1926 average as 100), stood at 99.1, as compared with 104.6 in the preceding month, and 94.4 at the same date in 1935; in consequence of the less-than-normal reduction at the latest date, the seasonally corrected index rose to 106.1, a gain of nearly four points over the similarly adjusted figure of 102.4 for December 1, 1935.

The following shows the unadjusted indexes as at January 1 in the sixteen years for which data are available: 1936, 99.1; 1935, 94.4; 1934, 88.6; 1933, 78.5; 1932, 91.6; 1931, 101.7;

1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8, and 1921, 88.8.

As is customary at the time of year, the contraction in many instances resulted from shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The experience of the last fifteen years shows that usually (though not invariably), there is on February 1 a partial recovery from the general losses recorded at the beginning of January.

The most pronounced curtailment at the date under review was in construction and manufacturing. The loss in the former, involving nearly 25,000 persons, was unusually large, having only twice been exceeded at January 1 in the last fifteen years, viz., at the opening of 1930 and 1932. The reverse was the case in factory employment, from which some 23,300 men and women were released, or little more than two-thirds of the average reduction in personnel at the beginning of January in the years since 1920; however, this shrinkage was greater than that noted at January 1, 1935, which was the smallest on record. The decline in manufacturing operations at the latest date constituted 44.5 per cent of the total decrease in all industries, as compared with an average proportion of 58.6 per cent in the years since 1920. The recession in manufacturing at the beginning of January in other years of the record has always been followed

by a revival during the month, although in no case has the recovery indicated at February 1 equalled the shrinkage noted in the preceding report. Within the manufacturing group, the largest losses at January 1 occurred in food, textile, lumber, iron and steel, leather, and pulp and paper factories.

Among the non-manufacturing industries, there were pronounced seasonal decreases in construction, as already mentioned, while there were reductions on a smaller scale in mining, communications, wholesale trade and transportation. Logging showed practically no general change. Hotels and restaurants and retail trade reported decided improvement; the in-

economic areas was distinctly better than at the beginning of January last year, being also more favourable in all but the Maritimes than at the same date in 1934, 1933 or 1932.

*Maritime Provinces.*—There was an increase in employment in the Maritime Provinces on January 1; this occurred chiefly in transportation, and was seasonal in character. On the other hand, manufacturing, mining, construction and trade showed curtailment; within the group of factory employment, there were considerable losses in food, clay, glass and stone and iron and steel plants. Statements were received from 654 firms employing 77,185 persons, compared with 76,762 at the beginning

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

crease in retail stores was greater than at the beginning of January in any other year for which statistics are available except 1935.

A fuller analysis of the situation in the various industries appears below.

#### Employment by Economic Areas

Four of the five economic areas recorded seasonally reduced activity, only the Maritime Provinces showing improvement. As is usual at the time of year, firms in Quebec and Ontario laid off the greatest number of workers, mainly owing to the concentration of manufacturing operations within their borders. The situation in each of the five

of December. Large reductions had been noted at January 1, 1935, when the index was over nine points lower. The advance at the date under review is contra-seasonal, employment having declined at the beginning of January in ten of the fifteen preceding years, so that the average change in the years, 1921-1935, is a decrease of nearly two points.

*Quebec.*—The contraction in Quebec was decidedly larger than that which took place at the same date of last year, and was also greater than the average decline at January 1 in the years since 1920. The index at 95.5 at the latest date, was over four points higher than at the beginning of 1935. Manufacturing

(notably in iron and steel, pulp and paper, textile, food, leather, lumber and electric light and power plants), transportation and construction reported the most pronounced losses, but the tendency was also downward in communications and wholesale trade. On the other hand, noteworthy improvement took place in logging, and retail trade and services were also busier. In many cases, operations will have been resumed early in the New Year in the establishments closed down over the holiday season and for purposes of inventory. The labour forces of the 2,231 co-operating employers aggregated 263,589 workers, as against 286,477 at December 1, 1935.

*Ontario.*—Manufacturing showed considerable curtailment in Ontario, that in food, textile, lumber and iron and steel factories being most noteworthy, although there were also important losses in leather, pulp and paper, electrical apparatus, clay, glass and stone, rubber, tobacco and beverage, and some other

groups. In the non-manufacturing industries, there were large contractions in transportation and building and highway construction, while mining and wholesale trade also showed a falling-off. Retail trade and railway construction and maintenance, on the other hand, recorded heightened activity, the gains in the former being substantial. A combined payroll of 393,917 persons was employed by the 4,169 firms whose returns were received, and who had 410,402 employees at December 1. The contraction, though larger than that noted at January 1 of last year, was decidedly smaller than the average loss recorded at that date in the preceding fifteen years; the index, at 102.7 was nearly five points higher than at January 1, 1935, and was also higher than at the beginning of January in the years, 1934-1931.

*Prairie Provinces.*—Declines on a much larger scale than at the opening of 1935, were noted in the Prairie Provinces. Statistics were tabulated from 1,374 employers of 120,-

Relative Weight of Employment by Economic Areas as at Jan. 1, 1936.....	100.0	8.3	28.2	42.2	12.9	8.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

252 workers, or 7,837 fewer than on December 1. This decline approximated the average loss experienced at the beginning of January in the years since 1920. The index at January 1, 1936, stood at 95.1, as compared with 91.2 at the same date in 1935. Construction reported the most marked losses at the date under review, but manufacturing, transportation and trade also showed curtailment. On the other hand, improvement occurred in logging and mining.

*British Columbia.*—The recession in British Columbia involved more workers than that indicated at January 1 of last year, when the index, at 88.8, was lower than that of 92.4 at the date under review. The 981 firms furnishing data reported 78,164 employees on January 1, 1936, as against 83,751 in the preceding month. Lumber mills, logging, mining, transportation, construction and trade recorded curtailment, that in the lumbering industries being most pronounced. Services and com-

munications, however, showed moderate improvement.

### Employment by Cities

There were contractions in each of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver reporting reduced employment. The situation in these cities was better than at the opening of last year.

*Montreal.*—The reduction in Montreal involved a much larger number of workers than that indicated at January 1, 1935, but was less than the average decline in the years since 1920; the index, at 86.4, was slightly higher than at the beginning of January in 1935. Statements for the latest month were received from 1,293 establishments with 129,755 employees, as compared with 138,142 in the preceding month. Particularly marked curtailment was shown in shipping and stevedoring

Relative Weight of Employment by Cit- ies as at Jan. 1, 1936..	13.9	1.3	13.2	1.4	3.3	1.7	4.2	3.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

and in manufacturing, especially in food, textile, leather and iron and steel plants. On the other hand, retail trade was busier.

*Quebec.*—Transportation reported a considerable seasonal loss, and manufacturing and construction also afforded less employment, while services and trade showed some improvement; the 167 co-operating employers in Quebec City reduced their staffs from 13,145 persons at December 1, to 12,383 at the beginning of January. This decline was much larger than that noted at January 1 of last year, but the index was then between four and five points lower.

*Toronto.*—Toronto firms showed a decidedly smaller seasonal contraction than at January 1 in 1935, or in fact, than at the same date in any other year for which data are available. The index, at 100.6, compared favourably with that of 95.8, at the opening of last year. There were important losses in manufac-

turing, the most noteworthy being in the textile, food, and pulp and paper groups; construction and transportation were also slacker, while retail stores reported very pronounced improvement. Returns were tabulated from 1,416 employers with 122,795 workers, compared with 123,197 in their last report.

*Ottawa.*—Manufacturing registered moderate seasonal curtailment; trade on the other hand, was rather more active, while the remaining industries showed little general change. The result was a small decrease in general employment in the city, according to the 175 reporting establishments, whose staffs aggregated 13,338 persons, as compared with 13,405 in the preceding month. An advance had been recorded on the same date of last year, when the index was a few points lower.

*Hamilton.*—Data were received from 275 firms in Hamilton employing 30,701 workers, as against 32,251 at December 1. Manufacturing and transportation showed reduced

Relative Weight of Employment by Industries as at Jan. 1, 1936.....	100.0	52.2	5.5	6.4	2.3	10.0	9.4	2.7	11.5

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

activity, while the fluctuations in other industries were slight. The falling-off noted at January 1, 1935, involved the release of a smaller number of workers, but the index was then between twelve and thirteen points lower.

*Windsor.*—There was a decrease in the number employed in Windsor at January 1, 1936, this taking place almost wholly in manufacturing and construction, while trade showed improvement. Returns were compiled from 172 establishments with 15,777 persons in their employ, as compared with 16,058 in the preceding month. Activity was decidedly greater than at January 1, 1935, although a gain on the whole had then been reported.

*Winnipeg.*—Employment in manufacturing and construction declined in Winnipeg, while other groups showed only slight changes. The 454 co-operating firms reported 39,284 employees, compared with 40,212 in the preceding month. This contraction involved

rather fewer workers than have been laid off on the average at January 1 in the last fifteen years, though it exceeded the loss at the same date in 1935. Employment then, however, was in smaller volume than at the opening of the present year.

*Vancouver.*—Reduced activity was indicated in Vancouver, according to returns from 417 employers of 31,125 persons, as compared with 32,086 at December 1. A small decrease had occurred at the corresponding date of last year, when the index was decidedly lower. There were losses at January 1, 1936 in manufacturing, notably of vegetable food and lumber products, and trade was also slacker than in the preceding month.

### Employment by Manufacturing Industries

As already stated, the recession in employment in manufacturing was substantially less than the average indicated at January 1 in the last fifteen years, 23,330 operatives having

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

been released from the staffs of the co-operating establishments, as compared with an average loss of some 34,200 in the period, 1921-1935. The general reduction in manufacturing at January 1, 1936, was one of the smallest on record, only those at January 1 in 1935 and 1934 having involved fewer workers, while the greatest decrease yet indicated by the employers furnishing statistics was that of over 72,000 at the commencement of 1921. The contraction at the date under review, as in other years, was partly due to comparatively brief shutdowns for inventory and over the holiday season. In each of the fifteen years for which data are now available, employment has shown partial recovery in the weeks succeeding January 1; on the average, this has amounted, up to the date of the next report (viz., February 1), to between 51 and 52 per cent of the decline noted at the opening of the year.

The manufacturers making returns for January 1, 1936, numbered 5,551, and their payrolls aggregated 487,147, compared with 510,477 on December 1. The index declined from 101.4 in the preceding month to 96.8 at the date under review, but as compared with 87.4 at January 1, 1935, showed an improvement of 9.4 points on the year. After adjustment for seasonal influences, the index at the latest date was 104.9, or 2.5 points higher than at December 1.

The most extensive reductions on the date under review were in food, textile, lumber, iron and steel, leather and pulp and paper, but the fur, rubber, tobacco and beverage, chemical, clay, glass and stone, electric light and power, electrical apparatus, non-ferrous metal, non-metallic mineral and miscellaneous manufacturing industries also recorded important curtailment. In the iron and steel and textile divisions, the declines were smaller than usual at the time of year according to the experience of the years since 1920. Activity in the various groups of factory employment was greater than on January 1, 1935.

The index numbers at January 1 in the years for which statistics are available are as follows: 1936, 96.8; 1935, 87.4, 1934, 80.0; 1933, 74.4; 1932, 83.9; 1931, 93.7; 1930, 106.5; 1929, 107.3; 1928, 97.9; 1927, 94.7; 1926, 90.0; 1925, 81.7; 1924, 86.7; 1923, 84.5; 1922, 74.4 and 1921, 84.8.

*Animal Products, Edible.*—Large reductions were reported in this division, mainly in meat and fish-preserving plants. Statements were received from 266 manufacturers with 20,911 workers, as compared with 21,975 at the beginning of December. This loss was larger than that recorded at January 1, 1935, but the index number was then nearly five points

lower. All five economic areas reported reduced employment, the heaviest contractions being in the Maritime Provinces and Ontario.

*Leather Products.*—There was a seasonal decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved a decidedly greater number of employees than that noted at the corresponding date last year; the index then, however, was lower. A combined working force of 19,548 persons was registered by the 279 firms making returns, as compared with 21,093 in the preceding month. Most of the loss occurred in Quebec and Ontario.

*Lumber Products.*—Seasonal contractions on a smaller scale than at January 1, 1935, were noted in lumber mills, 809 of which reduced their payrolls from 36,622 at December 1 to 33,314 workers at the beginning of January. Employment was in decidedly better volume than at the corresponding date of last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, vehicle, container and other wood-using industries. There were especially marked reductions in Ontario and British Columbia, although employment generally declined.

*Musical Instruments.*—Thirty-five manufacturers of musical instruments reported a combined staff of 1,472, practically the same number as in the preceding month. A large recession had been noted at January 1 a year ago, and the index number was much lower.

*Plant Products, Edible.*—There were seasonal reductions in employment in practically all branches of the vegetable food group, the greatest being in canning, sugar and syrup, flour and cereal, bakery, chocolate and confectionery factories. The working forces of the 446 co-operating employers totalled 28,158 persons, as compared with 33,137 in their last report. The contractions in Ontario were most pronounced; the movement, however, was generally unfavourable. The declines noted at the beginning of January last year were decidedly smaller, but the index number then was some five points lower than at the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1936, was slightly less than that noted at the same date in 1935, when employment was in smaller volume. Statistics were received from 595 firms, whose staffs aggregated 58,724 workers, or 1,232 fewer than in their last report. There were considerable losses in Quebec and Ontario. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper

goods, while no general change occurred in printing and publishing establishments.

*Rubber Products.*—Rubber factories showed a decrease, which exceeded that noted at January 1, 1935; 52 plants had 11,722 employees at the date under review, as against 12,522 at the beginning of December. Most of the loss took place in Ontario. The index number, at 92.0, compared favourably with that of 89.8 at the same date of last year.

*Textile Products.*—The 982 textile firms furnishing data released a smaller proportion of their total operatives than was the case among the establishments making returns at the beginning of January, 1935; the index then was nearly eleven points lower than at the date under review, when it stood at 113.3. The reported payrolls included 96,953 persons at January 1, 1936, as against 100,287 in the last report. Quebec and Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment and personal furnishing divisions.

*Tobacco, Distilled and Malt Liquors.*—There was a falling-off in employment at the beginning of January in the tobacco group, while beverages and other classes under this heading showed little change on the whole. Statements were tabulated from 172 manufacturers in this group, employing 18,287 workers, or 605 fewer than at December 1. Most of the decline took place in Ontario.

*Chemical Products.*—Employment in chemical and allied product plants showed a contraction at January 1 as compared with the preceding month, 344 persons having been released from the labour forces of the 201 reporting establishments, which had 10,771 employees. Rather smaller declines were noted at the corresponding date a year ago, but the index number then was lower.

*Clay, Glass and Stone Products.*—Further seasonal recessions in employment occurred in the production of these goods; 194 works reported an aggregate staff of 7,442, as compared with 8,341 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone plants recorded important declines; on the whole, these were on a larger scale than those of January 1, 1935, when employment was generally in less volume.

*Electric Light and Power.*—Employment in electric current plants again declined, according to statistics from 99 producers, employing 14,076 workers, or 591 fewer than at December 1. Quebec firms reported the greatest

curtailment. A rather smaller reduction had been noted at the beginning of January of last year, when the index was slightly lower.

*Electrical Apparatus.*—A decline in personnel was registered by the 111 co-operating electrical apparatus factories, whose labour forces aggregated 13,206 persons at January 1, as compared with 13,664 in the preceding month. Employment was more active than at the same date of 1935, when a greater falling-off had been noted.

*Iron and Steel Products.*—Crude, rolled and forged, heating appliance, shipbuilding, structural iron and steel, and some other works in this group reported considerable curtailment, while improvement was shown in agricultural implement and vehicle factories, that in the former being pronounced. The payrolls of the 846 firms furnishing data in the iron and steel industry totalled 111,868, against 114,554 employees at December 1. This contraction (which occurred largely in Ontario) greatly exceeded that noted at the same date in 1935, but was less than the average decline recorded in the years since 1920. The index was higher than at January 1 in 1935, 1934, 1933 or 1932.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products involved a smaller number of workers than that indicated at the same date in 1935, when the index was many points lower. Returns were compiled from 156 employers of 19,370 persons, as compared with 19,941 at the commencement of December. Most of the reductions were in Quebec, Ontario and British Columbia. An analysis of the data by industries shows that lead, tin, zinc and copper plants released most of the workers who were laid off, although the tendency was also downward in the precious metal group.

*Mineral Products.*—Decreased activity was noted in this group, in which little general change had occurred at the beginning of last year. A combined working force of 13,666 persons was employed by the 135 establishments whose returns were received, and who had 13,978 employees at December 1. The index was higher than at January 1, 1935, standing at 134.6 at the latest date, as against 132.3 in the same month of last year.

### Logging

Bush operations on the whole showed little change at January 1. The experience of the years since 1920 shows that there is customarily an exodus from logging camps over the holiday season, but the general movement in the present year was not so pronounced as usual,

only British Columbia reporting a large decline; this was offset by advances in Quebec and the Prairie Provinces. Employment was decidedly more active than in January of any other year since 1920, with the exception of 1930; the index stood at 183.4, compared with 183.5 at December 1, 1935, and 181.3 at January 1, 1935. A combined working force of 51,384 was reported by the 316 co-operating firms, who had 51,398 in the preceding month.

### Mining

*Coal.*—There was an increase in coal mines, 103 of which enlarged their payrolls from 25,378 persons at December 1 to 25,646 at the beginning of January. There were losses in the eastern, but gains in the western coal-fields. The index number at January 1, 1935, was slightly lower, employment having then shown a decline as compared with the preceding month.

*Metallic Ores.*—A moderate decrease was noted in metallic ore mines, according to data from 157 firms who employed 27,172 persons at the beginning of January, as compared with 27,535 in their last report. The index was decidedly higher than at the same date of last year, when a greater loss had occurred.

*Non-Metallic Minerals (Other than Coal).*—The trend of employment in this division continued seasonally downward; the reductions were on a smaller scale than at January 1 a year ago, but the index was then some twenty-one points lower. Statements were received from 77 firms employing 6,772 workers, as compared with 7,145 in the preceding month. The largest decline was in Ontario.

### Communications

Further losses took place on telephones and telegraphs; the situation was practically the same as that indicated at the same date in 1935, when decreases were also noted. The payrolls of the companies and branches furnishing data declined from 21,445 at December 1 to 20,990 employees at the beginning of January.

### Transportation

*Street Railways and Cartage.*—Employment in local transportation showed a seasonal contraction, involving many more workers than that noted at January 1, 1935, when the index number was lower by two points. A combined staff of 24,965 persons was reported by the 213 co-operating firms, who had 25,672 employees in the preceding month. The largest reductions were in Quebec and Ontario.

*Steam Railways.*—Steam railway operation showed a pronounced decline, improvement

in the Maritime Provinces being more than offset by contractions elsewhere. The payrolls of the 100 companies and divisional superintendents furnishing returns aggregated 57,032 persons, as against 58,117 in their last report. A rather greater decline had been recorded at the same date last year, when the index was 2.1 points lower than that of 71.7 at January 1, 1936.

*Shipping and Stevedoring.*—There was a large seasonal reduction in employment in water transportation, chiefly in Quebec and Ontario, while an important increase, also seasonal in character, was noted in the Maritime Provinces. The decline exceeded that indicated at January 1, 1935, when the index was practically the same. Returns for the date under review were compiled from 106 employers of 11,424 men, compared with 17,000 in the preceding month.

### Construction and Maintenance

*Building.*—Continued seasonal curtailment of operations was shown in building construction; 693 contractors reduced their staffs from 27,264 at the beginning of December to 22,712 at January 1. The most pronounced declines were in Quebec and Ontario, although there were losses in all five economic areas. Smaller decreases had been indicated at January 1 last year, but the index was then between ten and eleven points lower.

*Highway.*—Statements were received from 336 firms employing 44,191 workers, or 19,205 fewer than at December 1. Important losses occurred in all provinces. Road construction generally afforded less employment than in the winter of 1934-1935.

*Railway.*—A downward movement was shown in this division, in which 32 employers reported 20,896 persons on their payroll, as compared with 22,033 in the preceding month. The index was lower than at January 1 of a year ago, when large gains had been noted, due chiefly to snow-clearing operations. The Prairie Provinces recorded the most pronounced decreases at the date under review.

### Services

Improvement occurred in services, in which 453 firms employed 25,440 persons, or 370 more than in the preceding month. There was an increase in hotels and restaurants, while the fluctuations in the other divisions of the group were slight. Little general change had taken place at the beginning of January, 1935, when the index was lower.

### Trade

Trade afforded considerably more employment than at December 1, the improvement on the whole being much greater than at

the beginning of any other January for which statistics are available, except in 1935. There were moderate seasonal losses in wholesale establishments, but the additions to staffs in retail stores were exceptionally large. The 1,187 co-operating employers had 107,336 persons on their staffs, compared with 103,551 in their last report. The index stood at 135.9, as compared with 131.1 in the preceding month, and 130.6 at January 1, 1935.

## (2) Unemployment in Trade Unions at the Close of December, 1935

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades or who are idle due to illness are not considered as unemployed while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation for local trade union members declined slightly at the close of December, 1935, from the previous month, reflecting losses incidental to the holiday and inventory period in many lines of business. This was manifest from the December reports forwarded to the Department by 1,807 labour organizations involving a total of 170,503 members, 24,868 or 14.6 per cent of whom were out of work on the last day of the month, in contrast with a percentage of 13.3 in November. Employment recovery was apparent from December, 1934, when 18.0 per cent of the members reported were idle. New Brunswick and Quebec unions indicated a slightly better trend of activity than in November, while in the remaining provinces there was a general lowering in the volume of work available. Nova Scotia unions, with a drop in employment of nearly 4 per cent, showed the most noteworthy recessions, due in substantial measure to quietness in coal mining, though the tendency in the majority of trades was less favourable. In Ontario, Manitoba and British Columbia activity was curtailed by over 2 per cent. Saskatchewan unions showing losses on a slightly smaller scale, while in Alberta the change was fractional though adverse. In comparing with the returns for December, 1934, British Columbia members were afforded a considerably better volume of work during the month reviewed, the navigation and fishing industries particularly showing gains, and in Ontario the building trades, and lumber and logging indus-

## Tables

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

tries, were a large factor in the noteworthy improvement reported from that province. Quebec and Manitoba unions registered increases in employment of somewhat lesser degree; and in Saskatchewan activity advanced slightly. On the contrary, moderate losses in employment were noted by Nova Scotia members, while New Brunswick and Alberta unions showed curtailment of less than one per cent.

A separate compilation is made each month of unemployment affecting local trade union members in the largest city in each province with the exception of Prince Edward Island. There was a substantial rise in activity noted in Saint John during December from the previous month, and in Regina and Edmonton gains, on a more moderate scale, were registered. The situation in Montreal also tended favourably though the change from November was rather slight. On the other hand, Halifax, Toronto, Winnipeg and Vancouver unions indicated some falling off in activity which was not especially pronounced in any one city. Contrasted with conditions in December, 1934, Vancouver members were much more busily engaged during the month reviewed, and in Toronto also, the improvement recorded was pronounced. Advances of noteworthy proportions were registered by Regina unions, while in Montreal and Winnipeg lesser gains occurred. Extensive curtailment, however, was evident in Saint John from December a year ago, Halifax showing moderate recessions and Edmonton fractional losses only.

The chart which appears with this article shows the curve of unemployment by months from January, 1929, to date. During January and February, 1935, there was little variation in the level of the curve from the close of 1934, though the tendency was less favourable. In March, however, the projection was slightly downward from February, a manifestation of a greater volume of available work. This improvement, however, was not sustained throughout April, the curve attaining a slightly higher level than in March. In May a period of diminishing unemployment set in which continued until the close of September, as in-

dictated by the steadily lowering trend of the curve. The tendency for October was but nominally upward from the previous month, and the level at the close of November remained identical with that of October. During December seasonal curtailment due to the holiday period and customary closing for stock-taking and repairs caused the curve to trace a slightly upward course, though conditions as reflected by the chart were more favourable than at the end of 1934. Employment for the year just past reached its peak in September when 13.0 per cent of idleness was recorded, while the percentage of 18.2 shown at the close of February represented the unemployment maximum for the year.

the contrary, showed a large increase in slackness, and unemployment among general labourers and metal polishers was considerably more prevalent. Glass and garment workers indicated curtailment of more moderate proportions and iron and steel workers, printing tradesmen, and papermakers small declines in activity. Among brewery and jewellery workers the situation remained unchanged from that of November. When a comparison is made with the returns for December, 1934, wood workers, as in the previous comparison, showed employment expansion, on a large scale, during the month reviewed, and the gains recorded by metal polishers and general labourers were substantial. Noteworthy ad-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

From unions in the manufacturing industries 491 reports were received for December, combining a membership of 52,757 persons, 7,981 or 15.1 per cent of whom were idle on the last day of the month contrasted with percentages of 13.6 in November and 17.8 in December, 1934. Decidedly better conditions were reflected by wood workers during December than in the previous month, and among bakers and confectioners, textile and carpet, and cigar and tobacco workers marked improvement was noted. The tendency for leather and hat and cap workers was also toward heightened activity, though the change from November was slight. Fur workers, on

vancement was also apparent among iron and steel, and garment workers from December, 1934, papermakers, and cigar and tobacco workers showing moderate increases and hat and cap workers, and printing tradesmen but nominal improvement. Employment for leather and fur workers, on the contrary, showed a large falling off from December a year ago, and declines, on a small scale, occurred among glass, jewellery, textile and carpet, and brewery workers, and bakers and confectioners.

Minor contractions in activity were evident in the coal mining industry during December from the preceding month, the 53 unions

making returns with a total of 16,012 members showing that 1,015 or a percentage of 6.3 were without work at the end of the month in contrast with 4.6 per cent in November. Quieter conditions prevailed also than in December, 1934, when 3.9 per cent of inactivity was

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

registered. Retarded activity in the Nova Scotia coal mines was the determining factor in the less favourable situation noted in the industry as a whole, though contributory losses on a small scale were reflected from British Columbia. In Alberta there was little change in the level of activity from November though the tendency was toward increased employment. Nova Scotia, Albert and British Columbia unions all shared in the retrogressive movement shown in coal mining from December 1934, but the recessions were not of particular significance in any one province.

The building and construction trades showed some slackening in available work during December from the previous month, though the situation was considerably improved from December, 1934. This was apparent from the returns forwarded by 198 associations of these tradesmen, with an aggregate of 19,696 members, 8,891 or 45.1 per cent of whom were idle on the last day of the month contrasted with 42.5 per cent in November and 58.6 per cent in December, 1934. Electrical workers, and building labourers and hod carriers were much busier than in November, and among tile layers, lathers and roofers, granite and stonecutters, and painters, decorators and paperhangers improvement of lesser degree was noted. Of the recessions which more than offset these gains, the most important was registered by bricklayers, masons and plasterers who suffered heavy losses in available work. Steam shovelmen, whose membership was quite small, indicated a large percentage increase in slackness. Activity for bridge and structural iron workers was also substantially curtailed from November, and among carpenters and joiners, and plumbers and steamfitters the situation declined moderately. Contrasted with the returns for December, 1934, bricklayers, masons and plasterers, carpenters and joiners, electrical workers, granite and stonecutters, tile layers, lathers and roofers, and bridge and structural iron workers all indicated decided betterment of conditions during the month reviewed while the tendency for plumbers and steamfitters was favourable though the variation from December a year ago was quite slight. Unemployment for hod carriers and building labourers, however, was in considerably greater prevalence than in December, 1934. Among painters, decorators and paperhangers also, there was some falling off in activity during the month reviewed. Steam shovelmen indicated recessions in employment on a small scale.

Slight curtailment in work afforded was manifest in the transportation industries during December from the preceding month, unemployment standing at 8.7 per cent as com-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

pared with a percentage of 7.5 in November. The percentage for December was based on the reports received from 811 organizations of transportation workers, involving 57,740 members, 5,013 of whom were unemployed on the last day of the month. Improvement in conditions was reflected from December, 1934, when 11.3 per cent of idleness was recorded. Among steam railway employees, whose returns constituted over 78 per cent of the entire group membership reported, there was some lessening in employment afforded when compared with November which was a large factor in the unfavourable trend noted for the group as a whole. Navigation workers showed little variation in the employment level from November though the tendency was also toward retarded activity. Among street and electric railway employees the same percentage of idleness was recorded in both months. Teamsters and chauffeurs, on the other hand, were more busily engaged during the month surveyed. Navigation workers, steam and street and electric railway employees all shared in the employment advancement reflected from December, 1934, navigation workers particularly showing recovery on a large scale. Nominal recessions in employment only, were manifest by teamsters and chauffeurs.

The 5 associations of retail shop clerks furnishing reports at the close of December, with 1,723 members indicated an unemployment percentage of 3.7 in contrast with percentages of 1.8 in November and 7.8 in December, 1934.

Activity for civic employees subsided slightly during December from the previous month, as shown by the returns compiled from 75 associations with a membership numbering 8,223 persons. Of these, 264 or 3.2 per cent were idle at the close of the month compared with an unemployment percentage of 2.0 in November. The situation varied but slightly from December, 1934, though the trend was favourable, unemployment for that month standing at 3.8 per cent.

In the miscellaneous group of trades during December employment conditions remained substantially the same as in the preceding

month, the 126 local unions forwarding reports with an aggregate of 5,011 members showing an unemployment percentage of 10.4 on the last day of the month compared with 10.6 per cent in November. Hotel and restaurant employees, and stationary engineers and firemen were afforded a somewhat greater volume of work than in November which was mostly counteracted by the declines in activity evident among theatre and stage employees, barbers and unclassified workers. Improvement on a rather noteworthy scale was recorded from December, 1934, in the miscellaneous group of trades when 15.4 per cent of inactivity was recorded, stationary engineers and firemen showing the most pronounced gains, though better conditions also prevailed among theatre and stage employees, and unclassified workers. Activity for hotel and restaurant employees, and barbers, however, was slightly retarded from December, 1934.

Employment for fishermen showed a small decline during December from the previous month, but the situation was decidedly more favourable than in December, 1934. This was apparent from the returns compiled from 4 unions of these workers, with a total of 569 members, 204 or 35.9 per cent of whom were unemployed at the close of the month in comparison with percentages of 31.6 in November and 88.8 in December a year ago.

Reports were received at the close of December from 4 unions of lumber workers and loggers, involving 517 members, 15.1 per cent of whom were without work contrasted with a percentage of 12.1 at the end of November. Employment recovery on a large scale was noted from December, 1934, when 50.6 per cent of the members recorded were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1935 inclusive and also the percentage of unemployment by provinces for December of each year from 1919 to 1932 inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for December, 1935

The records of the Employment Service of Canada for the month of December, 1935, when compared with those of November and also December a year ago showed decreases of nearly 9 per cent and 8 per cent, respectively, in the average daily placements recorded. Under both comparisons the group largely responsible for the adverse change was construction and maintenance, in which relief work sponsored by the Dominion and Pro-

vincial Governments had been considerably curtailed. Quite heavy losses from November were also recorded in services, logging, manufacturing and transportation, with a smaller one in mining. Farming and trade, only, showed gains, the former being fairly large, due to the placement of workers under the Farm Labour Relief Plan. While construction and maintenance, as mentioned above, registered a very heavy decline in placements from

those of December, 1934, this was offset, in part, by a marked gain in farming and services. Losses in transportation and mining were also counterbalanced by gains in manufacturing and logging. Trade showed a small increase.

The accompanying chart shows the trend of employment since January, 1933, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications followed

1935, was 1,189, as compared with 1,288 during the preceding month and with 1,287 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,080, in comparison with 2,602 in November and with 1,910 in December, 1934.

The average number of placements made daily by the offices of the Service during December, 1935, was 1,126, of which 735 were in regular employment and 391 in work of one week's duration or less, as compared with a total daily average of 1,234 during the preceding month. Placements in December a

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

an upward trend throughout December, but at the close of the year were still over 11 points below the levels attained at the end of the corresponding period in 1934. The ratio of vacancies to each 100 applications was 53.4 and 61.2 during the first and the second half of December, 1935, in comparison with ratios of 62.7 and 72.9 during the corresponding periods of 1934. The ratios of placements to each 100 applications during the periods under review were 50.2 and 58.3, as compared with 59.1 and 69.6 during the corresponding month of 1934.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December,

year ago averaged 1,221 daily, consisting of 585 placements in regular and 636 in casual employment.

During the month of December, 1935, the offices of the Service referred 29,269 persons to vacancies and effected a total of 28,144 placements. Of these, the placements in regular employment were 18,375, of which 14,727 were of men and 3,648 were of women, while the placements in casual work totalled 9,769. The number of vacancies reported by employers was 21,559 for men and 8,154 for women, a total of 29,713, while applications for work numbered 51,983, of which 41,380 were from men and 10,603 from women. Reports for November, 1935, showed 32,196 positions avail-

able, 65,033 applications made and 30,835 placements effected, while in December, 1934, there were recorded 32,165 vacancies, 47,746 applications for work and 30,513 placements in regular and casual employment.

During the year 1935 the offices of the Service throughout Canada reported 376,574 vacancies, 656,421 applications and 353,802 placements in regular and casual employment. These totals were somewhat lower than those for the year 1934, when there were listed 427,792 vacancies, 724,365 applications for work and 406,091 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1925 to date:

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935.....	226,345	127,457	353,802

#### NOVA SCOTIA

Employment opportunities as indicated by orders received at employment offices in Nova Scotia during December were nearly one per cent less favourable than in the preceding month, and nearly 16 per cent below the corresponding month of 1934. Placements also were nearly 2 per cent less than in November and over 15 per cent less than during December a year ago. Placements on relief projects were considerably less than during December, 1934, and accounted for the decline under this comparison, as small losses in services and trade were more than offset by increased bush placements. Placements under construction and maintenance numbered 456, and in services 285. Of the latter 206 were of household workers. During the month 200 men and 63 women were placed in regular employment.

#### NEW BRUNSWICK

During the month of December, positions offered through employment offices in New Brunswick were nearly 4 per cent higher than in the preceding month and nearly 21 per cent above the corresponding month of 1934.

There was a gain of nearly 3 per cent in placements when compared with November and of nearly 19 per cent in comparison with December a year ago. The gain over December, 1934, was due to increased placements in construction and maintenance and services, there being positions found for 225 workers in the former industrial group and 549 in the latter. Of the 549 placements in services 440 were of household workers. Placements in regular employment numbered 181 of men and 84 of women.

#### QUEBEC

There was a decline of nearly 9 per cent in the number of positions offered through employment offices in the Province of Quebec during December when compared with the preceding month, but a gain of 16 per cent in comparison with the corresponding month of 1934. Placements were over 12 per cent less than in November, but nearly 20 per cent above December, 1934. Placements in logging, construction and maintenance and services were considerably high than during December a year ago and accounted for the increase under this comparison. The changes in all other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were manufacturing 72; logging 1,326; construction and maintenance 853; trade 96; and services 1,811, of which 1,684 were of household workers. There were 2,360 men and 1,237 women placed in regular employment during the month.

#### ONTARIO

The demand for workers, as indicated by orders received at employment offices in Ontario during December, was nearly 9 per cent less than in the preceding month and over 31 per cent below the corresponding month of 1934. Placements also declined nearly 11 per cent when compared with November and nearly 33 per cent in comparison with December a year ago. There was a large decrease in the number of placements on relief work in comparison with December, 1934, which accounted for the large decline under this comparison. Small losses were also reported in transportation, manufacturing and logging, but these declines were partly offset by gains in services, farming and trade. Placements by industrial divisions included manufacturing, 378; logging, 626; farming, 381; construction and maintenance, 3,647; trade, 341; and services, 3,786, of which 2,055 were of household workers. Placements in regular employment numbered 2,405 men and 1,127 women.

## MANITOBA

During December, 1935, employment offices in Manitoba received orders for over 8 per cent less workers than in the preceding month, but over 28 per cent more than during the corresponding month of the previous year. There was a decline of over 8 per cent in placements when compared with November but a gain of nearly 27 per cent in comparison with December, 1934. An increase under construction and maintenance, made up largely of relief placements, was responsible for the gain over December a year ago. This improvement was offset in part by declines in farming, logging and services. Placements by industrial divisions included logging, 130; farming, 1,674; construction and maintenance, 1,794; and services, 688, of which 592 were of household workers. There were 3,634 men and 400 women placed in regular employment during the month.

## SASKATCHEWAN

Orders received at employment offices in Saskatchewan during December called for nearly 32 per cent more workers than in the preceding month and 16 per cent more than during the corresponding month of 1934. There was a gain also in placements of nearly 37 per cent when compared with November and of nearly 21 per cent in comparison with December, 1934. A substantial increase in farm placements under the Farm Labour Relief scheme was responsible for the gain over December a year ago. There was also a small gain under manufacturing. Losses were reported in all other groups, the largest being in construction and maintenance. Industrial divisions in which most of the placements were effected during the month were manufacturing 63; farming, 2,202; construction and maintenance, 76; and services, 566, of which 462 were of household workers. During the month 2,303 men and 316 women were placed in regular employment.

## ALBERTA

Opportunities for employment, as indicated by orders received at employment offices in Alberta during December, were nearly 27 per cent less than in the preceding month, but over 6 per cent above the corresponding month of 1934. Placements were nearly 27 per cent less than in November, but 9 per cent above December a year ago. When comparing placements by industrial divisions with December, 1934, the most important gains were in farming, construction and maintenance and mining, and the largest decline in logging. A small increase in manufacturing was offset by a loss in trade. Placements by industrial divisions included logging, 73; farming, 895; mining, 90; construction and main-

tenance, 1,291; and services, 368, of which 293 were of household workers. There were 2,194 men and 235 women placed in regular employment.

## BRITISH COLUMBIA

Orders received at employment offices in British Columbia called for over 12 per cent less workers than in the preceding month and nearly 7 per cent less than during the corresponding month of 1934. Similar percentages of loss were reported in placements under both comparisons. The only decline of importance in placements from December a year ago was in construction and maintenance, and was due to a reduction in placements on relief projects. This loss was partly offset by gains in manufacturing and trade. The changes in other groups were unimportant. Placements by industrial divisions included manufacturing 72; construction and maintenance, 2,136; and services, 662, of which 417 were of household workers. During the month 1,450 men and 186 women were placed in regular employment.

## Movement of Labour

During the month of December, 1935, the offices of the Employment Service of Canada effected 18,375 placements in regular employment, 9,773 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 589 were granted the Employment Service reduced transportation rate, 544 going to centres within the same province as the despatching office and 45 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during December three certificates for reduced transportation were issued at the Hull office to bush workers bound for employment in the Pembroke zone. Persons travelling at the Employment Service reduced transportation rate in Ontario during December totalled 446, these going to provincial situations. At Port Arthur, 224 bush workers, 83 highway construction workers, 2 fishermen, one miner and one domestic secured certificates for transportation to various points within the same zone. The Fort William office despatched 90 bush workers and one mine cookee, and the Sudbury office 22 bush workers to their respective zones. In addition, the Fort William zone was the destination of 9 mine workers carried from Timmins. Proceeding to posi-

tions within the Timmins zone 10 pulp cutters were conveyed from North Bay and 3 bridge builders from Pembroke. Manitoba transfers at the reduced rate during December were 52 in number, 11 provincial and 41 inter-provincial. All of these were effected by the Winnipeg office, which assisted in the despatch of 7 bush workers, 2 mine workers, one restaurant cook and one tractor driver to centres within its own zone. Travelling outside the province 40 bush workers were destined to the Port Arthur zone and one hotel porter to Prince Albert. Offices in Saskatchewan granted 34 certificates for reduced transportation during December, all to points within the province. For centres within their respective zones the Yorkton office transferred 24 bush workers, the Prince Albert office 7 bush workers and the Regina office one teacher. To the Yorkton zone also, one farm domestic journeyed from Saskatoon. The Regina office, in addition, shipped one farm hand to Swift Current. Business transacted by Alberta offices during Decem-

ber involved the issue of 52 reduced rate certificates, 51 of which were to provincial points. Of these, 49 were granted at Edmonton to 23 bush workers, 8 mine workers, 7 fishermen, 5 hotel employees, 3 farm hands, 2 domestics and one edgerman going to employment at centres within the Edmonton zone. From Calgary, one farm hand and one farm housekeeper were carried to Drumheller. The one transfer outside the province was of a dairyman proceeding from Edmonton to Saskatoon. The labour movement in British Columbia during December comprised the despatch of 2 persons, one a mine flunkey shipped from Vancouver to Penticton and the other a tiemaker sent from Prince Rupert to a point within its own zone.

Of the 589 workers who profited by the Employment Service reduced transportation rate during December, 276 travelled by the Canadian National Railways, 295 by the Canadian Pacific Railway, 12 by the Temiskaming and Northern Ontario Railway and 6 by the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada During December, 1935

The building permits issued by 58 cities in December, 1935, represented construction work valued at \$2,390,014, as compared with \$3,315,001 in November, 1935, and \$2,521,820 in December, 1934. There was, therefore, a decrease of \$924,987 or 27.9 per cent in December as compared with the preceding month, and of \$131,806 or 5.2 per cent as compared with the same month of 1934.

In 1935, the value of the building authorized in each month but December was greater than in the same month of 1934, while from January, the aggregate for each month exceeded that for the corresponding month in 1933. The total for 1935 was higher than in any of the last three years, standing at \$46,236,702, as compared with \$27,457,524 in 1934, \$21,776,496 in 1933 and \$42,319,397 in 1932; the 1935 figures are unrevised, while those for previous years are revised. Although the improvement indicated last year was partly due to the granting of construction permits for public buildings in several centres as an unemployment relief measure, the movement in general building operations was also more favourable than in the last few years. In comparison with earlier years of the record, from 1920 to 1931, however, the value of building authorizations continues low. The index number of wholesale prices of building materials during 1935, at 82.2 per cent of the 1926 basic average, was lower than in any preceding year for which building statistics for the 58 cities are on record, with the exception of 1931, 1932 and 1933.

A review of building permits granted in 1935 will be issued next month.

Detailed statements were received from some 50 cities, showing that they had issued some 160 permits for dwellings valued at almost \$400,000 and over 300 permits for other buildings at an estimated cost of more than \$800,000. There were also four permits taken out for engineering work at a cost of \$47,770. During November, the construction of some 260 dwellings and 1,060 other buildings was authorized; these were estimated to cost approximately \$1,434,000 and \$1,640,000, respectively.

As compared with the preceding month, Quebec reported an increase of \$409,600 or 79 per cent in the value of the authorized building. Declines were indicated in the remaining provinces, that of \$1,165,953 or 50.6 per cent in Ontario being most pronounced.

Quebec, Saskatchewan and British Columbia recorded increases as compared with December, 1934, in the value of the building authorized. In this comparison, Quebec reported the greatest gain of \$673,951, or 265 per cent. Of the reduction in the remaining provinces, that of \$684,752 or 37.5 per cent in Ontario was most marked.

Of the four largest cities, Montreal registered increases, both as compared with November, 1935, and December, 1934. Winnipeg and Vancouver reported declines as compared with the preceding month, but an increase over the same month in 1934,

while Toronto showed reductions in the value of the building permits issued in each comparison. Of the smaller centres, Sherbrooke, Three Rivers, Westmount, Belleville, Chatham, Stratford, St. Thomas, Sault Ste. Marie, Woodstock, Saskatoon, Edmonton, Kamloops, Nanaimo and New Westminster recorded advances as compared with November, 1935, and also with December, 1934.

*Cumulative Record for 1935.*—The following table shows the value of the building authorized by 58 cities during the Decembers of the years since 1920, and also for the completed years; the 1935 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1935 will be issued next month.) Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-35.

The unrevised statistics for 1935 indicate that last year's aggregate was 68.4 per cent higher than in 1934; it was also considerably higher than in 1933 and rather higher than in 1932. With these exceptions, the total was lower than in any other year since 1920.

In this connection, it should be noted that the Bureau's index number of wholesale prices of building materials was practically the same as in 1934; while it was slightly higher than in 1931, 1932 or 1933, it was lower than in any year from 1920 to 1930.

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1926=100)	Average indexes of wholesale prices of building materials in twelve months (Average 1926=100)
1935.....	\$ 2,390,014	\$46,236,702	29.6	82.2
1934.....	2,521,820	27,457,524	17.6	82.6
1933.....	1,983,292	21,776,496	13.9	78.3
1932.....	1,569,255	42,319,397	27.1	77.2
1931.....	7,895,106	12,222,845	71.8	81.9
1930.....	15,440,281	166,379,325	106.4	90.9
1929.....	14,688,682	234,944,549	150.2	99.0
1928.....	16,095,160	219,105,715	140.1	97.1
1927.....	11,755,566	184,613,742	118.0	96.1
1926.....	11,508,818	156,386,607	100.0	100.0
1925.....	7,363,777	125,029,367	79.9	102.9
1924.....	6,463,319	126,583,148	80.9	106.6
1923.....	6,974,256	133,521,621	85.4	111.8
1922.....	9,517,402	148,215,407	94.8	108.7
1921.....	5,537,330	116,794,414	74.7	122.7
1920.....	4,844,354	117,019,622	74.8	144.0

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, January, 1936, summarized the employment situation as follows:—

Employment at December 16, 1935, showed a substantial improvement, on the whole, as compared with November 25.

There was a further improvement in employment in coal mining, iron and steel manufacture, engineering, and the cotton and linen industries. Employment also increased in the distributive trades, hotel and boarding house service, the construction and repair of vehicles, tailoring, dressmaking and textile bleaching, dyeing, etc. On the other hand, employment continued to decline in building, pottery manufacture and the fishing industry, and there was also some decline in hosiery manufacture and in the boot and shoe industry.

Among those workpeople, of ages 16-64, who were insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at December 16, 1935 (including those temporarily stopped as well as those wholly unemployed), was 14.2, as compared with 14.6 at November 25, 1935, and with 16.0 at December 17, 1934. The percentage wholly

unemployed at December 16, 1935, was 12.6, as compared with 12.9 at November 25, 1935; while the percentage temporarily stopped was 1.6, as compared with 1.7. For males alone the percentage at December 16, 1935, was 16.3, and for females 8.7; the corresponding percentages at November 25, 1935, were 16.6 and 9.3.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at December 16, 1935, was 10,599,000. This was 62,000 more than at November 25, 1935, and 340,000 more than at December 17, 1934.

At December 16, 1935, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,585,990 wholly unemployed, 205,574 temporarily stopped, and 77,001 normally in casual employment, making a total of 1,868,565. This was 49,997 less than a month before, and 217,250 less than a year before. The total included 1,501,576 men, 53,959 boys, 267,109 women, and 45,921 girls.

The persons on the Registers included 831,334 persons with claims for insurance benefit; 720,944 insured persons with applications for unemployment allowances; 192,885 insured persons (including 20,339 insured juveniles under 16 years of age) not in receipt of insurance

benefit or unemployment allowances, and 123-402 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at December 16, 1935, was 1,932,839.

### United States

*Manufacturing industries.*—Forty of the 90 manufacturing industries surveyed reported larger number of workers in December than in the preceding month. Pay-rolls rose 2·8 per cent over the month interval. This increase in pay-rolls is partially due to the fact that pay-rolls in the preceding month were slightly reduced by the observance of the Armistice Day holiday in certain localities. Gains in pay-rolls were wide-spread however, 62 of the 90 manufacturing industries surveyed having reported increases.

The most pronounced gains in employment over the month interval were in the electric and steam-car building industry (9·1 per cent), boots and shoes (6·3 per cent), wirework (4·4 per cent), and agricultural implements (4·1 per cent). Employment in the cast-iron pipe industry increased 3·1 per cent and gains of 3 per cent each were shown in the iron and steel forgings and the textile machinery industries. Among the remaining 33 industries reporting employment gains were such important industries as automobiles (2·3 per cent), book and job printing (2·3 per cent), foundries and machine shops (1·8 per cent), cotton goods (1·8 per cent), slaughtering and meat packing (1·8 per cent), newspapers and periodicals (1·2 per cent), machine tools (1·4 per cent), silk and rayon goods (1·0 per cent), and blast furnaces-steel works-rolling mills (0·9 per cent).

Seasonal declines in employment were reported in December in beet sugar (39·2 per cent), canning and preserving (18·9 per cent), radios and phonographs (15·3 per cent), jewelry (9·5 per cent), cement (9·4 per cent), stoves (8·0 per cent), and cottonseed oil-cake-meal (7·8 per cent). The soap industry reported a decrease of 6·2 per cent in employment over the month interval and losses ranging from 3 per cent to 3·9 per cent were reported in steam and hot-water heating apparatus, mens furnishings, flour, millwork, explosives, shirts and collars, and aircraft.

Employment in the durable goods group decreased 0·5 per cent from November to December and the non-durable goods industries showed a net decline of 0·4 per cent. Both groups reported increases in weekly pay-rolls over the month interval, the gains being 2·8 per cent in the durable goods group and 2·9 per cent in the non-durable goods group. The index of employment in the durable goods group for December (75·7) indicates that for

every 1,000 workers employed during the index base period (1923-1925) 757 were employed in December, 1935. The December non-durable goods index (94·1) indicates that 941 out of every 1,000 workers employed during 1923-1925 were working in December 1935.

The indexes of factory employment and pay-rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In December 1935, reports were received from 23,481 establishments employing 3,932,980 workers whose weekly earnings were \$87,458,485. The employment reports received from these co-operating establishments cover more than 55 per cent of the total wage earners in all manufacturing industries of the country and more than 65 per cent of the wage earners in the 90 industries included in the Bureau of Labor Statistics' monthly survey.

*Non-manufacturing industries.*—In addition to the estimated increase of 342,300 workers in retail-trade establishments, approximately 30,000 workers returned to jobs in anthracite and bituminous coal mines. The increase of 23 per cent in employment in anthracite mines represents a gain of approximately 15,300 workers and indicates a partial recovery from the sharply reduced operations of the preceding month. The gain of 4·0 per cent in employment in bituminous coal mines indicates an increase of approximately 14,200 workers. Weekly pay rolls of anthracite mines were estimated to be approximately \$1,194,000 greater during the December 15 pay period than in the corresponding period of the preceding month.

The most pronounced declines in employment from November to December were seasonal in character. Employment in quarries and non-metallic mines decreased 7·7 per cent over the month interval due to winter weather conditions. In the private building construction industry the seasonal decrease in employment (6·7 per cent) was not as pronounced as the decreases shown in the corresponding month of the preceding 4 years for which information is available. Dyeing and cleaning establishments also reported seasonal contraction, 3·8 per cent fewer employees being reported in December 1935 than in November.

Employment in wholesale trade establishments continued the expansion which has been shown consistently each month since July 1935. Based on reports received from 16,405 establishments employing 305,594 workers in December, there was a net gain of 0·4 per cent in employment over the month interval. The December 1935 index (86·8) exceeds the level reported in any preceding month since

February 1931. Among the several lines of wholesale trade in which gains in number of workers were shown from November to December were jewelry and optical goods, paper and paper products, tobacco, hardware, furniture and house furnishings, electrical goods, farm products, and farm supplies. Small declines in employment were reported in such important lines as dry goods and apparel, groceries, food products, and petroleum and petroleum products.

Employment in anthracite mines increased 23.0 per cent from November to December and pay-rolls rose 95.3 per cent, recovering in large measure the losses reported in the preceding month, which were attributed to poor market conditions and the observance of Armistice Day.

*Public employment.*—The number of jobs provided by the construction program financed by the Emergency Relief Act of 1935 showed an increase of more than 1,300,000 during December. The total employed on this program during the month ending December 15 amounted to more than 2,550,000. Pay-roll disbursements for the month totalled more than \$101,000,000. More than \$25,000,000 worth of material was purchased during the month for use on these construction projects.

Employment on the Public Works Administration program decreased by 45,000 during the month. This leaves the total of 235,000 people employed on this program as of December 15. Pay-rolls for these workers exceeded \$17,000,000. Purchase orders were placed for construction materials valued at over \$25,000,000 during the month.

There were 513,000 men employed on emergency conservation work (C.C.C. Camps) during December. Of this total, 455,000 were enrolled workers. In addition to the enrolled men, there were 9,700 reserve officers, 2,200 camp educational advisers, and 46,500 technical and supervisory workers. Pay-rolls for this work totalled nearly \$22,000,000.

Due to the seasonal curtailment of road work, there was a decrease of nearly 5,000 in the number of workers employed at the site of construction projects financed from appropriations made by Congress direct to the Federal Departments. All other types of construction so financed showed slight gains during the month. More than 57,000 workers were employed on these construction projects. They earned approximately \$4,000,000 for their month's work.

The construction and maintenance of State roads provided work for 150,000 men during the month. This compares with the November total of 171,000. Pay-rolls for December totalled \$6,200,000.

*Private building construction.*—Seasonal recessions in employment and pay-rolls from November to December were shown in the private building construction industry. The decrease of 6.7 per cent in employment was less pronounced, however, than the declines reported in December of any of the 4 preceding years for which data are available. Previous December losses in employment have ranged from 10.7 per cent (December 1931) to 17.7 per cent (December 1933). The decrease in weekly pay-rolls (4.3 per cent) was less pronounced than the employment decline, indicating higher average earnings in December than in the preceding month. The data are based on reports received from 9,699 contractors employing 80,278 workers during the day period ending nearest December 15. The figures relate to employees engaged in the erection, altering, and repairing of *private* buildings and do not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds, regular appropriations of the Federal, State and local governments, or loans insured by the Federal Housing Administration.

#### Summary of Co-operative Movement

More than 139 million persons in 43 countries are members of co-operative societies of different types, according to an article appearing in the January issue of the *Monthly Labour Review*, United States Bureau of Labour Statistics. Data gathered from various sources show that three-fifths of these belonged to consumers' societies and slightly over one-fifth were engaged in agricultural co-operation. The retail consumers' societies had an annual business of more than 12 billion dollars, and the co-operative wholesale societies a combined turn-over of over 900 million dollars. In Great Britain the retail societies returned to their members in 1 year (1934) more than 115 million dollars in interest on share capital and rebates on purchases. An added saving of nearly 16 million dollars was made for member retail societies by the three wholesale societies of the country.

Tabular statistics indicate the number and membership of co-operative societies in specified types by countries. These statistics show that Canada, in 1933, had 1,113 societies of all types; and of this total 372 were consumers' co-operatives, 162 credit societies, 300 were agricultural associations and 219 were classed as other types. The total membership in Canadian co-operative societies in 1933 was given as 552,897; of which number 39,001 were in consumers' societies, 36,470 in credit societies, 314,426 in agricultural associations and 163,000 in other types.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable

hours. These "A" conditions, in so far as wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the LABOUR GAZETTE of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and

that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF THE INTERIOR

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Contract for the construction of a Museum building at Chambly, P.Q. Name of contractor, Mr. Akilas Menard, Chambly Canton, P.Q. Date of contract, September 23, 1935. Amount of contract, \$11,987.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 40	8
Cement finishers.....	0 50	8
Stonemasons.....	0 70	8
Stonecarvers.....	0 70	8
Stonecutters.....	0 60	8
Brick and hollow tilayers.....	0 70	8
Structural steel workers.....	0 65	8
Ornamental iron and bronze work- ers.....	0 50	8
Carpenters and joiners.....	0 50	8
Sheet metal workers.....	0 55	8
Roofers, asbestos shingles.....	0 50	8
Insulation workers, asbestos.....	0 50	8
Marble and tile setters.....	0 70	8
Lathers, metal.....	0 50	8
Plasterers.....	0 70	8
Plasterers' helpers.....	0 35	8
Painters and glaziers.....	0 50	8
Plumbers and steamfitters.....	0 55	8
Electricians.....	0 55	8
Labourers.....	0 30	8
Driver, team and wagon.....	0 55	8
Teamster.....	0 30	8
Motor truck driver and truck.....	1 35	8
Motor truck driver.....	0 35	8

N.B.—Where, by agreement or current practice, the working hours of any class of labour are less than 48 per week, such lesser hours shall not be exceeded on this work.

Contract for the construction of the Columbia River bridge on the Golden-Revelstoke Highway, B.C. Name of contractors, Canadian Bridge Co., Ltd., Walkerville, Ont. Date of contract, August 22, 1935. Amount of con-

tract, \$33,305.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Structural steel erectors.....	\$0 90	8
Hoist engineer on steel construction.....	0 90	8
Fireman.....	0 50	8
Labourers.....	0 40	8
Teamsters.....	0 40	8
Teamsters, team and wagon.....	0 65	8
Motor truck drivers.....	0 45	8
Painters.....	0 65	8
Carpenters.....	0 70	8

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Supply and installation of canopy hangar doors and operating mechanism for Hangar A. 3 at the R. C. A. F. Training Station, Trenton, Ontario. Name of contractors, Mis-Can-Ada Manufacturing Co., Ltd., Ottawa, Ont. Date of contract, January 18, 1936. Amount of contract, \$23,398.00. A fair wages schedule was inserted in the contract as follows:—

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction,  
Remodelling, etc.)*

Construction of wharf repairs and reinforce-  
ment at Port Daniel East, P.Q. Name of con-  
tractor, Mr. Henri Lemieux, Lauzon, P.Q.  
Date of contract, December 30, 1935. Amount  
of contract, approximately \$33,251.32. A fair  
wages schedule was inserted in the contract as  
follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 45	8
Carpenters and joiners.....	0 50	8
Compressor operators.....	0 40	8
Drill runners—machine.....	0 40	8
Firemen—stationary.....	0 35	8
Hoist operator—steam.....	0 55	8
Labourers.....	0 30	8
Painters.....	0 50	8
Pile driver runners.....	0 55	8
Powdermen.....	0 40	8
Structural steel workers.....	0 65	8
Driver, team and wagon.....	0 55	8
Teamster.....	0 30	8
Motor truck driver.....	0 35	8
Acetylene or electric welders.....	0 55	8
Timbermen or cribmen using inter- changeably such tools as broad- axe, hammer, cross-cut saw, auger and adze.....	0 37½	8

Construction of an extension to the wharf at  
Peninsula, Gaspé Co., P.Q. Name of con-

tractor, Mr. Cyprien Langlois, Chandler, P.Q.  
Date of contract, October 19, 1935. Amount of  
contract, approximately \$5,169.71. A fair wages  
schedule was inserted in the contract as  
follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Machinist.....	\$0 55	8
Blacksmith.....	0 45	8
Carpenters and joiners.....	0 50	8
Timbermen or cribmen (using inter- changeably such tools as broad- axe, hammer, saw, auger and adze).....	0 37½	8
Teamster (horse and cart).....	0 45	8
Drill runners.....	0 40	8
Boatmen.....	0 30	8
Firemen.....	0 35	8
Hoist operator (gasoline).....	0 45	8
Hoist operator (steam).....	0 55	8
Motor truck drivers.....	0 35	8
Compressor operator.....	0 40	8
Labourers.....	0 30	8
Motor truck driver and 1½-2 ton truck.....	1 35	8
Teamster (team and wagon).....	0 55	8

Reconstruction of wharf at Carleton, P.Q.  
Name of contractor, Mr. Wm. Harney, Quebec,  
P.Q. Date of contract, January 11, 1936.  
Amount of contract, approximately \$35,950.72.  
A fair wages schedule was inserted in the con-  
tract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day

Stamping Machines, etc.....	Machine Works, Ltd., Mont- real, P.Q.
Scales.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter Boxes and Locks.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

#### Dust Control in Industry

The discussions on "Industrial Health Hazards and Employer Responsibility, with particular emphasis on Dust Collection and Control" featured the annual convention last year of the American Foundrymen's Association. The papers together with their attendant discussions on these subjects have been recently reprinted in pamphlet form, contents of the brochure being as follows:—

Industrial Health Hazards and Employer Responsibility by Dr. W. J. McConnell, and by Donald E. Cummings; Dust Collection in the Foundry by S. D. Moxley; and Methods of Dust Control by J. D. Leitch.

In dealing with methods of dust control Mr. Leitch of the Ontario Department of Health, analyzed the problem into several subdivisions as follows: Dust source, general methods of control; estimation of the hazard; testing ventilation equipment; selection of a fan; piping; dust collections, respirators; and the importance of maintenance.

His general conclusions were as follows:—

1. No source of dust is too insignificant for attention.

2. Any efforts made to control dust will probably result in other economies being effected.

3. A dust problem requires not only co-operation of employers, but of employees as well, in a conscientious effort to control the dust hazard.

4. There is always a best way of handling a given dust problem, and this can usually be determined only by experiment in the application of fundamental principles.

5. Apart from all dust counts as a means of indicating the relative hazards in industry, the ultimate test of the effectiveness of the dust control can be determined only by medical examination. Therefore, it is a necessary part of any dust control program that periodical examination be made of all workmen engaged in dusty atmospheres.

There were 4,416 accidents reported to The Workmen's Compensation Board during the month of January, as compared with 4,832 during December, and 4,376 during January of last year. The benefits awarded amounted to \$456,117.69, of which \$368,453.59 was for compensation and \$87,664.10 for medical aid. The benefits awarded during January a year ago amounted to \$506,070.86.

The transactions of the National Safety Council (giving the proceedings of the twenty-fourth annual Safety Congress) held last fall at Louisville, Kentucky, have recently been published in two volumes. The first, recently received, contains the general sessions, the special subject sessions, and the Industrial Section sessions. It is supplemented by a smaller volume containing the sessions of the Street and Highway Traffic Section, the Child Education Section and Home Safety.

The problem of the "Care of the Homeless in Unemployment Emergencies" has been the subject of study by the Family Welfare Association of America (New York), and a report containing suggestions for a community program has recently been published.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

### Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS UNION, LOCAL 255.

Agreement to be in effect from May 28, 1935 to May 27, 1937, except that the wage scale may be reconsidered on May 27 of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, March, 1934, page 275, and June, 1934, page 565.

Hours and the hourly wage rate are unchanged, the 45 hour week and the wage rate of 85 cents per hour for journeymen pressmen remaining in effect.

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS UNION, LOCAL No. 255.

The agreement which came into effect May 16, 1933, and which was summarized in the LABOUR GAZETTE, March, 1934, page 275, and June, 1934, page 566, has been renewed without change to May 15, 1936.

Wage rates and hours for journeymen pressmen remain at 85 cents per hour with a 44-hour week for day work and 90 cents with a 42-hour week for night work.

### Transportation and Public Utilities: Long Distance Motor Transportation

VANCOUVER, B.C.—A CERTAIN INTERURBAN BUS COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES AND MOTOR COACH EMPLOYEES.

Agreement to be in effect from July 1, 1935, to June 30, 1937. This is an amendment to the agreement which came into effect July 1, 1934.

The Company recognizes the union and will not show any discrimination against members of the union.

Schedules to be arranged so that operators have one day off in seven. Operators called for work on their day off to be paid a specified minimum amount. Operators having a clear record for the year are to have six days holidays with pay.

Wage rates which came into effect July 1, 1934, were: regular operators 48½ cents per hour or 4.1 cents per mile, whichever is greater, with a guaranteed minimum of \$4.85 per day; regular spare board operators 54 cents per hour or 4.1 cents per mile, whichever is greater, with a guaranteed minimum of \$91 per month; extra spare board operators (on call) 54 cents per hour or 4.1 cents per mile, whichever is greater, with no minimum guarantee; regular operators standing by (after finishing regular trip or in case of breakdown on route) 62½ cents per hour; runs taken by operators after regular shifts, as in the case of overloads or holiday business 62½ cents per hour or 4½ cents per mile, whichever is greater; charters 62½ cents per hour or 4½ cents per mile, whichever is greater; relief operators \$5.80 per day (to compensate for dead mileage in relieving country operators on runs which start at points away from Vancouver). In the amendment which came into effect July 1, 1935, an increase of 2½ per cent was made in all these rates, with a guaranteed minimum of \$5 per day for regular operators. Extra pay provided for taking a bus to or from the garage.

### Quebec Collective Labour Agreements Extension Act

The following amendments to agreements under this Act in the province of Quebec have recently been made obligatory by Order in Council and are noted in the article beginning on page 199 of this issue:—

Shoe Workers, Province of Quebec.

Longshoremen (Inland Navigation), Montreal.

Bakers, Quebec City.

Bread Deliverymen, Quebec City.

Men's and Boys' Clothing Workers, Province of Quebec.

### Industrial Standards Act of Ontario

The following schedules have been made binding by Order in Council and terms summarized in this issue in the article beginning on page 200:—

Carpenters and joiners, Kingston.

Painters and paperhangers, Kingston.

Painters and paperhangers, St. Catharines.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include amendments which are summarized below to five Orders in Council extending agreements. Notices of application for changes in the agreements affecting millinery workers at Montreal and men's and boys' clothing workers throughout the province appeared in the January 4 issue of the *Quebec Official Gazette*. A correction to the request for modification of the agreement for barbers at St. Hyacinthe and Drummondville was published in the issue of January 18. A notice of application for the extension of a new agreement for building trades at Sherbrooke which includes trades additional to those in the former agreement appeared in the January 4 issue. A correction to the request for the extension of the agreement affecting sheet metal workers throughout the province also appeared in the January 4 issue.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the

advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**SHOE WORKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved December 28, 1935, and published in the *Quebec Official Gazette*, January 4, amends the original Order in Council and amendments for these workers (*LABOUR GAZETTE*, September 1934, page 825, February, 1935, page 149, and January, 1936, page 89) by prohibiting manufacturers from periodically changing from the piece work system to the hourly pay system or vice versa, "such change permitting an illegal reduction of the rate of wages."

**BAKERS, QUEBEC.**—An Order in Council, approved December 28, 1935, and published in the *Quebec Official Gazette*, January 4, 1936, amends the original Order in Council and amendments for this trade (*LABOUR GAZETTE*, February, 1935, page 148, June, page 531, and November, page 1065) by changing the territorial jurisdiction to comprise the counties of Quebec, Levis and Montmorency, but also provides that master bakers in the counties of Portneuf, Lotbinière, Charlevoix, Dorchester and Bellechasse, who sell all or part of their production within the counties of Quebec, Levis and Montmorency are also to be governed by this agreement. This amendment also provides that outside the city of Quebec, and the town of Levis and a radius of 15 miles around them, the minimum wage rates for bakers may be reduced by 15 per cent.

**BREAD DELIVERYMEN, QUEBEC.**—An Order in Council, approved December 27, 1935, and published in the *Quebec Official Gazette*, January 4, 1936, amends the original Order in Council for these workers (*LABOUR GAZETTE*, July, 1935, page 629) by changing the territorial jurisdiction to the same as for the bakers at Quebec noted above, and provides that outside the city of Quebec and the town of Levis and a radius of 15 miles of their limits, the minimum wage for deliverymen may be 10 per cent less than in the original agreement.

**LONGSHOREMEN (INLAND NAVIGATION VESSELS), MONTREAL.**—An Order in Council, approved December 28, 1935, and published in the *Quebec Official Gazette*, January 4, 1936, corrects the amendment which was noted in the *LABOUR GAZETTE*, January, page 90, by a change in the number of a paragraph (which does not affect the summary in the *LABOUR GAZETTE*).

**MEN'S AND BOYS' CLOTHING WORKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved January 9 and published in the *Quebec Official Gazette*, January 11, and a further Order in Council, approved January 23 and published in the *Quebec Official Gazette*, January 25, amend the original Order in Council and amendments for these workers

(*LABOUR GAZETTE*, March, 1935, page 238, April, page 323, August, page 733, and November, page 1064) by adding a new class to the classification of workers, class "K," which consists of all basting pullers (male), and for whom the minimum wage rate is 16 cents per hour in Zone 1, 12½ cents in Zone 2 and 11½ cents in Zone 3, these rates to be paid until the worker is promoted into another class. The rate for class "H" for the first six months is changed from 11½ to 12½ cents per hour in Zone 3. It is also provided that where a factory is closed on certain religious holidays, the time may be made up on previous or subsequent days at regular rates of pay, providing the Joint Committee is notified.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Schedules Recently Approved by Orders in Council

**THE** Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, 1935, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the *LABOUR GAZETTE*, summaries are given in this article of the schedules which have thus been approved.

**CARPENTERS, KINGSTON.**—An Order in Council, dated December 23, 1935, and published in *The Ontario Gazette*, January 11, makes ob-

ligatory the terms of a schedule on all those engaged in the carpentry trade on building and construction work in a zone which includes the city of Kingston and the surrounding district which is defined in the Order in Council.

The schedule is in effect from January 21, 1936, to December 17, 1936.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Shift work, 8 hours per day.

Overtime: from 5 p.m. to 10 p.m. on the first five days of the week and from noon to 5 p.m. on Saturdays, and all work on the eight specified holidays, time and one-half. All other overtime and all work on Sundays, double time. No overtime after 5 p.m. on Saturdays.

Minimum wage rate for carpenters and joiners: 75 cents per hour, but all work contracted for and accepted prior to December 17, 1935, of which due notice has been given to the Board on or before February 10, 1936, may be completed at a rate set by the Board. A rate of wages may be determined by the Board appointed under the Act or this agreement, for aged or handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

**PAINTERS AND PAPERHANGERS, KINGSTON.**—An Order in Council, dated January 7 and published in *The Ontario Gazette*, January 11, makes obligatory the terms of a schedule on all those engaged in the painting, decorating, paperhanging and glazing trade in a zone which includes the city of Kingston and the surrounding district which is defined in the Order in Council.

The schedule is in effect from January 21, 1936, to December 17, 1936.

Minimum wage rates: spray painters 85 cents per hour; painters, paperhangers, decorators and glaziers 70 cents.

All other provisions of this schedule are the same as those summarized above in the schedule for carpenters at Kingston, except that only four holidays are mentioned and work on these must be paid for at double time.

**PAINTERS AND PAPERHANGERS, ST. CATHARINES.**  
—An Order in Council, dated January 10, and published in *The Ontario Gazette*, January 18, makes obligatory the terms of a schedule on all those engaged in the painting, paperhanging, decorating and glazing trade in a zone which includes the city of St. Catharines and the surrounding district which is defined in the Order in Council.

The schedule is in effect from January 28, 1936, to December 9, 1936.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Shift work, 8 hours per shift.

Overtime and work on five specified holidays, time and one-half, but not more than four hours' overtime in any one working day. Work on Sundays, Christmas Day and Labour Day, double time.

Minimum wage rates: spray painters 80 cents per hour; painters, paperhangers, decorators and glaziers 65 cents. All work contracted for and accepted prior to December 9, 1935, of which due notice has been given to the Board on or before February 10, 1936, may be completed at a rate approved by the Board. The Board may set a rate for aged or handicapped workers.

Apprentices to be governed by the Ontario Apprenticeship Act.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1936

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, due to an advance in the cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices on a weekly basis was lower at the end of the month than at the beginning but was somewhat higher week by week than in December.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$8.17 at the beginning of January, 1936, as compared with \$8.14 in December, 1935; \$7.51 in January, 1935; \$6.67 for March, 1933 (the low point in recent years); \$11.88 for January, 1930; \$11.03 for January, 1922; \$16.92 for June, 1920 (the post-war peak); and \$7.73 for January, 1914. Changes in January as compared with the previous month were slight, seventeen items showing a somewhat higher cost and six lower. The largest increases occurred in the cost of beef, mutton, milk, butter, bread and potatoes, and the largest declines in bacon, lard and eggs. Including the cost of fuel and rent with that of foods the total budget was \$16.68 at the beginning of January as compared with \$16.65 for December, 1935; \$15.99 for January, 1935; \$15.41 for June, 1933 (the low point in recent years); \$22.17 for January, 1930; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post-war peak); and \$14.49 for January, 1914. Both fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 72.7 for the week ended January 31, 1936, as compared with 72.9 for the two previous weeks; 73.0 for the week ended January 10; 72.6 for the week ended December 27, 1935; and 72.7 for the week ended December 6. On a monthly basis this index number was 72.6 in December, 1935 (the last month available); 71.4 in January, 1935; 70.7 in January, 1934;

63.5 in February, 1933 (the low point in recent years); 95.3 in January, 1930; 97.1 in January, 1922; 164.3 in May, 1920 (the post war peak); and 64.9 in January, 1914. Grain prices were lower at the end of January than at the beginning. In the animal products group lower quotations for eggs and cattle more than offset advances for hogs, causing this group to decline. In textiles raw cotton and raw silk also declined in price and in non-ferrous metals the principal change was a fall of five cents per ounce in the price of silver.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the *LABOUR GAZETTE*, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the *LABOUR GAZETTE* for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1936\*

(Average prices in 1913=100)

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

### Retail Prices

Beef prices, which had declined gradually between July and December, 1935, turned upward in most localities at the beginning of 1936, sirloin steak averaging 22.9 cents per pound in January as compared with 22.5 cents in December, 1935, and 25.3 cents in July. Rib roast averaged 17.4 cents per pound in January and 16.9 cents in December. Veal and mutton also were at higher levels in January than in the preceding month, shoulder roast of veal averaging 14.1 cents per pound as compared with 13.5 cents, and leg roast of mutton averaging 21.3 cents per pound as compared with 20.2 cents. Breakfast bacon was down from 30 cents per pound in December to 29.3 cents in January.

Egg prices averaged 2 cents per dozen lower at 41.5 cents per dozen in January. Increases occurred in some localities but these

†Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

‡For the week ending January 31, 1936; monthly figures not yet available.

\*The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

(Continued from page 202)

were more than offset by declines in others, particularly in Ontario, Alberta and British Columbia. The price of milk averaged fractionally higher at 10.3 cents per quart, increases being reported from several cities. Butter continued to advance, dairy being up in the average from 26.6 cents per pound in December, 1935, to 27 cents in January, 1936.

The price of bread was fractionally higher at an average of 6.2 cents per pound. Potatoes were little changed in price from the level of the preceding month but were much higher than one year ago, averaging \$1.24 per ninety pounds as compared with 73 cents in January, 1935. United States anthracite

coal was again slightly higher, averaging \$14.90 per ton in January as compared with \$14.83 the previous month.

The United States Department of the Interior has issued a series of fifteen bulletins for the use of educational advisers and instructors in Civilian Conservation Corps camps. The titles of these publications are as follows:—Agriculture, Automobile Repairing, Automotive Electricity, Carpentry, Concrete Construction; Cooking, Conservation of Natural Resources, Forestry, House Wiring, Elementary Masonry and Bricklaying, Mechanical Drawing, Photography, Radio Servicing, Soil Conservation, Plane Surveying.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1935," which is a supplement to the January issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 91.4 for December, an increase of 0.2 per cent for the month. Both the food and tobacco and the industrial materials groups advanced slightly, the largest increases being one of 3 per cent in coal and of 2.2 per cent in the meat, fish and eggs group.

The *Statist* index number, on the base 1867-1877=100, was 86.7 at the end of December, an advance of 0.5 per cent for the month. Foodstuffs were 1.7 per cent higher due to the increase of 4.5 per cent in vegetable foods. Industrial materials were practically unchanged, decreases in minerals and sundries being partly offset by a slight advance in textiles.

**COST OF LIVING.**—The Ministry of Labour index number, on the base July, 1914=100, was 147 at January 1, showing no change from the previous two months. The only change in any group for the month was in fuel and light, for which an advance was recorded.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold index) was 72 for December, showing no change from the previous month. A small increase in foods, chiefly animal foods, was partly offset by a slight decrease in the minerals and metals group.

### Germany

**WHOLESALE PRICES.**—The federal statistical index number, on the base 1913=100, was 103.4 for December, an increase of 0.3 per cent for the month. Fractional increases were recorded in each of the four main groups of commodities.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 123.4 for December, an advance of 0.4 per cent for the month, due to small increases in food and clothing prices.

### United States

**WHOLESALE PRICES.**—The Bureau of Labor Statistics index number, on the base 1926=100, was 80.6 for November, an increase of 0.1 per cent for the month. Small decreases were noted in the farm products, building materials and miscellaneous groups which were more than offset by small advances in the other seven groups.

**COST OF LIVING.**—The Industrial Conference Board index number, on the base 1923=100, was 84.8 for December, an advance of 0.6 per cent for the month. Four out of the five groups showed increases, the fifth, sundries, remaining unchanged. The increase in food prices was 1.3 per cent.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1935

**T**HE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1935 was 245, there being 91 in October, 79 in November and 75 in December.

The report for the third quarter of 1935, showing 262 fatalities, was given in the LABOUR GAZETTE, November, 1935, page 1078. In the fourth quarter of 1934, 260 fatal accidents were recorded (LABOUR GAZETTE, February, 1935, page 215). The supplementary lists of accidents, not reported in time for inclusion in the reports

covering the periods in which they occurred, contains 20 fatalities for the first three quarters of 1935, and 2 fatalities for 1934.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of

Total.....	19	29	10	52	29	34	6	37	12	1	16	...	245

1935 were as follows: agriculture, 19; logging, 29; fishing and trapping, 10; mining, non-ferrous smelting and quarrying, 52; manufacturing, 29; construction, 34; electric light and power, 6; transportation and public utilities, 37; trade, 12; finance, 1; service, 16.

Of the mining accidents, 22 were in "metal-liferous mining," 29 in "coal mining," and 1 in "structural materials."

Of the accidents in manufacturing, 3 were in "vegetable foods, drink and tobacco," 3 in "animal foods," 2 in "textiles and clothing," 1 in "rubber products," 5 in "saw and planing mill products," 1 in "wood products," 2 in "pulp, paper and paper products," 4 in "iron, steel and products," 6 in "non-metallic mineral products," 1 in "chemical and allied products," and 1 in "miscellaneous products."

In construction there were 8 fatalities in "buildings and structures," 2 in "shipbuilding," 17 in "highway and bridge," and 7 in "miscellaneous construction."

In transportation and public utilities, there were 16 fatalities in "steam railways," 3 in "street and electric railways," 8 in "water transportation," 7 in "local transportation," and 3 in "telegraphs and telephones."

In trade there were 2 fatalities in "wholesale," and 10 in "retail."

Of the fatalities in service, 9 were in "public administration," 1 in "laundering, dyeing and cleaning," 2 in "custom and repair," and 4 in "personal, domestic and business."

There was one serious disaster during the period under review which occurred at Coalhurst, Alberta, on December 9, when sixteen coal miners were killed by an explosion caused by ignition of gas in a mine. The victims were just going on the night shift at the time of the disaster. There were only 30 men working on a slack time schedule in the mine at the time and fourteen of them reached the surface, three of whom were seriously injured. One theory as to the cause is that sparks from a telephone circuit in the mine may have ignited the gas which caused the explosion. Following the coroner's inquest and in response to a request from a delegation of miners, the provincial attorney-general announced that a complete inquiry into the disaster would be made, to open on February 3.

On October 17, three fishermen were drowned near Digby, Nova Scotia, when a scallop dragger collapsed; and four fishermen were drowned near Caraquet, New Brunswick, on November 8, when a dory capsized.

Two miners were drowned in Gods Lake, Manitoba, on October 2, when a canoe was swamped in rough water. Two miners were overcome from gas during blasting operations at Timmins, Ontario, on October 22.

On October 22, two workmen lost their lives at Montreal, Quebec, following an explosion of a gasoline heater while removing wall paper by steam process.

On October 5, near Benito, Manitoba, an R.C.M.P. constable and a municipal con-

stable were slain by three robbers whom they were transporting as prisoners, and two days later an R.C.M.P. sergeant and a constable were shot while attempting to recapture these three bandits, near Canmore, Alberta.

#### Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first three quarters of 1935 has been compiled which contains 20 fatalities, of which 1 was in logging, 1 in mining, non-ferrous smelting and quarrying, 4 in manufacturing, 3

in construction, 7 in transportation and public utilities, 1 in trade, and 3 in service. One of these accidents occurred in January, 1 in February, 1 in April, 1 in May, 1 in June, 5 in July, 1 in August, and 9 in September.

A further supplementary list of accidents occurring in 1934 has been made. This includes 2 fatalities of which 1 was in transportation and public utilities, and 1 in trade. One of these accidents occurred in September and 1 in December.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Law for Government Regulation of Milk Prices in Quebec Valid

A MONTREAL milk dealer was tried and found guilty on November 13, 1935, by Judge Marin in the Montreal Court of Sessions of the Peace on charges of having sold milk to other distributors at a price lower than that fixed by the Dairy Industry Commission under the Dairy Products Act.

Counsel for the accused argued that the Dairy Products Act, passed by the Provincial Legislature in 1933 and amended in 1934, and regulations under the Act fixing prices below which the selling of milk is prohibited, were in conflict with two Dominion statutes, namely the Combines Investigation Act and Section 498 of the Criminal Code, and that the provincial Act was an invasion of the right given to the Dominion Parliament by the British North America Act to legislate in matters concerning the regulation of trade and commerce.

It was held by the Court that regulation of the purchase and sale of dairy products is within the jurisdiction of the province under the terms of the Dominion's constitution "since it is of a purely local and private nature, since it relates to a matter of property and civil rights and since in import, nature and character it does not extend outside the province."

As to the question of whether the provincial Act permits operations which are forbidden under the Dominion laws against combinations in undue restraint of trade, Judge Marin held that the Dairy Products Act does not unduly restrict trade or competition, that the fixing of milk prices by the Dairy Industry Commission does not operate to the detriment or against the interest of the public and is not the result of an agreement, and that consequently there is no conflict between it and either the Combines Investigation Act or Section 498 of the Criminal Code. The provincial Act, the Court stated, "was passed among other things to safeguard the interests of the producer-suppliers, milk dealers and distribu-

tors of dairy products and consumers. . . . In my humble opinion, the Dairy Products Act is not only not in conflict with the Combines Investigation Act but has the same object: to prevent the formation of combines to operate against the interest of the public."

*Rez. v. Simoneau* (1936), 1, Dominion Law Reports, 143-152.

### Collective Agreement May be Extended under Quebec Act Only to Employers in Same Industry as Parties to the Agreement

A judgment involving the Collective Labour Agreements Extension Act was handed down by Mr. Justice J. B. Chase-Casgrain in the Superior Court of the District of Montreal on October 15 last. The case arose from a claim for wages amounting to \$726 by a painter employed by Coristine Realities, Ltd. The plaintiff claimed that he was paid 30 cents an hour for work at his trade in connection with the property managed by the defendant company whereas he should have been paid 60 cents an hour, the painters' rate fixed in the collective agreement between the Montreal Builders' Exchange Inc., and the Building Trades Council of Montreal. This agreement was made binding on all employers and employees engaged in the building industry in Montreal by virtue of Order in Council of July 18, 1934, issued under the authority of the Collective Labour Agreements Extension Act, 1934.

There were three defences: First, that the plaintiff was engaged by the week and not paid an hourly rate; second, that he was not employed as a painter but as a cleaner; and third, that the Order in Council making the agreement binding did not apply to the defendant company which was not engaged in the building industry.

The Court held that the first two claims of the defendant were not well founded. It appeared from the evidence that the plaintiff was paid \$18 for a 60-hour week. When he worked more than 60 hours, he was paid 30

cents for each additional hour. When he worked less than 60 hours, he was paid proportionately less. Moreover, when the company decided to dismiss the plaintiff he was not given the week's notice which would have been required had he been engaged by the week. As to the second defence, it was shown that the plaintiff was designated as a painter in the company's records, that he was a member of the painters' union and had been granted a certificate of competency in that trade in accordance with the provisions of the Collective Labour Agreements Extension Act. While at times he was engaged in cleaning walls, etc., this work was held by the Court to be such as is necessarily carried on by painters.

The only remaining question, then, for the Court to determine was whether the defendant company was bound by the Order in Council made under the authority of the Act. Mr. Justice Chase-Casgrain quoted section 2 of the statute:—

The Lieutenant-Governor in Council may order that a collective labour agreement, made between, on the one part, one or more associations of employees and, on the other part, employers or one or more associations of employers, shall also bind all the employees and employers in the same trade or industry provided that such employees and employers carry on their activities within the territorial jurisdiction determined in the said agreement.

Whenever an order is made under the preceding paragraph, the only provisions of the collective labour agreement which thus become obligatory, upon the classes of employees and employers concerned, are those respecting rates of wages and hours of labour.

From the wording of this section, he considered that "only when a collective labour agreement is made, on the one hand, between one or more associations of employees in the same trade and, on the other hand, by employers or one or more associations of employers in the same industry is the Lieutenant-Governor in Council authorized to order that such collective labour agreement shall bind, also, all persons employed at the trade and all employers in the same industry." He pointed out that the essential condition for the extension of an agreement was that it should be applied only to workmen in the same trade as those who had voluntarily entered into the agreement and, on the other hand, only to employers in the same industry as the employers who had made the agreement. In the application of this principle to the case before him, Mr. Justice Chase-Casgrain held that the defendant company was not an employer in the same industry as the employers who had made the agreement, although the plaintiff was of the same class as the workers making the agreement. In his opinion, an Order in Council sufficiently broad to cover the case before

him could not properly be issued under the authority of the statute.

The Court then pointed out that it was stipulated in the order in council that special rates of wages should apply to building contracts of less than \$5,000 in certain municipalities and, further, that building contracts signed before the adoption of the order in council, should not be covered by it. From this provision, it appeared that the order in council applied only to "building contracts" and not to an individual contract of service unrelated to building but having to do merely with the maintenance of a property managed by the employer. Since the statute is an exception to the general law it was held that it must be strictly construed. It seemed, then, to the Court that only building contracts were intended to be governed and that the Act was designed to provide for fixing reasonable rates of wages to be paid by employers in industry who were employing for the purposes of their business persons of certain trades who work in their industrial establishments but that it was not meant to fix the wages which private individuals were to pay who were not employing persons for the purposes of their business. In the opinion of the Court, to interpret the law as applying to the contract of an individual worker for the upkeep of a private house would result in depriving a man temporarily unemployed of a chance of work at his trade. Much repair work which is not absolutely necessary would not be done by private individuals if they had to pay for the labour at the rate paid in factories and industrial establishments.

The Judge observed that while Article 6 of the statute provides:

The provisions of a collective labour agreement made obligatory under this act shall, in the region fixed, govern all the individual labour contracts in connection with the trade or industry contemplated by the agreement, yet he considered that the Legislature had in view the employment of a workman by an employer in industry. In any case, even if this section could be interpreted as governing all contracts made with a workman, it could apply only relatively to building and not to simple maintenance work or repairs required, under the Civil Code, to be made by a tenant.

The Court here made reference to *Lalumière vs. Dupuis* (LABOUR GAZETTE, September, 1935, page 882), in which Mr. Justice Mackinnon of the Superior Court of Montreal held that a man employed by an ice-dealer in making repairs to an ice-house was entitled to the rate of wages fixed in the agreement governing the building trades. Mr. Justice Mackinnon pointed out that the work on which the plaintiff was engaged was not a simple repair under-

taking but involved the reconstruction of the walls of an old building. The Judge referred to this work as "greater repairs" which are defined in the Civil Code as those repairs for which the owner and not the tenant is responsible and which involve re-construction of parts of the building.

Mr. Justice Chase-Casgrain distinguished the case before him from *Michaud vs. Forest* and *Bertrand vs. Forest* in which it was decided that

the Act applied to an employer who built houses on land belonging to himself with a view to sale. These decisions, he pointed out, had to do with construction work in which the employer was a professional builder.

The action was dismissed with costs. Notice of appeal against the judgment has been given.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A moderate decrease was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 9,394 firms, each with a minimum of fifteen employees. The staffs of these firms at February 1 aggregated 927,006 persons, as compared with 933,294 at January 1. This decline compared unfavourably with the average gain noted at February 1 in preceding years of the record, which commences with 1921. The index, based on the 1926 average as 100, fell from 99.1 at January 1 to 98.4 at the beginning of February, as compared with 94.6 at the same date in 1935. At February 1 in the preceding fourteen years it was as follows: 1934, 91.4; 1933, 77.0; 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9; 1921, 91.2. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1936, reports were forwarded to the Department of Labour by 1,779 local trade unions involving a membership of 167,717 persons. Of these, 24,830 were without employment, a percentage of 14.8 in contrast with percentages of 14.6 at the beginning of January, 1936, and 18.1 at the beginning of February, 1935.

Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in January, 1936, when a comparison was made with the preceding month, but a gain over January a year ago, these comparisons being based on the average daily placements effected during the periods under review. Total placements, however, were less in January, 1936, than during the corresponding month last year, as there was one less working day to be taken into consideration. Vacancies in January, 1936, numbered 29,270, applications 61,665, and placements in regular and casual employment 27,716.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting,

and rent at the beginning of February, 1936, was slightly lower at \$16.58 as compared with \$16.68 the previous month, due to a decrease in the cost of foods. Comparative figures for the budget total on certain earlier dates are: \$16.06 at the beginning of February, 1935; \$15.41 for June, 1933 (the low point in recent years); \$22.12 for February, 1930; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.54 for February, 1914. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 72.5 for the week ended February 28 as compared with 72.6 the previous week and 72.7 for the week ended January 31. On a monthly basis this index was 72.9 for January, 1936; 71.9 for February, 1935; 63.5 for February, 1933 (the low point in recent years); and 93.9 for February, 1930.

The most recent statistics available reflecting industrial conditions in Canada are given in a table on page 218. The index of the physical volume of business in January, 1936, was 1.4 per cent lower than in the previous month but 7.4 per cent higher than in January, 1935. In the former comparison mineral production, manufacturing and carloadings declined, while construction, trade employment, imports and exports were higher. Comparing January, 1936, with January, 1935, all of the principal groups showed advance, the largest being 33 per cent in construction, 14 per cent in exports, 6.3 per cent in manufacturing and 4 per cent in electric power output. Information available for February shows improvement in carloadings over January but lower than in February, 1935. Contracts awarded were lower in value both as compared with the previous month and with February, 1935, while in the same comparison wholesale prices were little changed.

The number of strikes and lockouts on record during February was six, involving 2,902 workers and causing a time loss of 18,987 man working days, as against four disputes during January, involving 205 workers and resulting in a time loss of 1,105 days.

\*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

†For the week ended February 28.

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(4) Figures for end of previous month.

(5) Figures for four weeks ending February 29, 1936 and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending February 22 and January 25, 1936, December 31, February 23 and January 26, 1935, and December 31, 1934.

(7) MacLean's Building Review.

In February last year the number of disputes was eight, involving 1,551 workers and causing a time loss of 16,315 days. Two of the strikes during February, cotton factory workers at Three Rivers, P.Q., and dressmakers at Toronto, Ont., involved comparatively large numbers of employees while none of the disputes during January involved many workers. In February, 1935, two of the disputes—coal miners at Corbin, B.C., and at Springhill, N.S.—involved comparatively large numbers of workers. Of the six disputes in February, five were recorded as terminated, one resulting in favour of the employer affected, one in favour of the workers involved, one being partially successful, while a compromise settlement was reached in one case and the result of another recorded as indefinite. One dispute was recorded as unterminated at the end of the month and involved some seven workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Motion for Establishment of National Employment Commission**

Among the recommendations of the Dominion-Provincial conference of last December was the establishment of a Dominion Commission on employment and relief (LABOUR GAZETTE, January, page 35). Action in this direction was initiated in the House of Commons on March 6, when the Hon. Norman McL. Rogers, Minister of Labour gave notice of the following motion:—

That it is expedient to bring in a measure to provide for the establishment of a commission, to be known as the National Employment Commission, to supervise or administer the expenditure of funds voted by Parliament for unemployment relief and for providing employment, and for other purposes related thereto; and to provide for fees or compensation and for the travelling and living expenses of the commissioners, for the salaries of the secretary and other employees of the commission, and also for the travelling and living expenses of the members of a National Advisory Committee.

#### **Coal Combine Report made public**

The Minister of Labour, Hon. Norman McL. Rogers, on March 11 tabled in the House of Commons the report made in 1933 by the Registrar of the Combines Investigation Act on an investigation into an alleged combine in the importation and distribution of British anthracite coal in Canada. This

report had not previously been made public. Its two hundred pages include a comprehensive review of the development of the British anthracite trade in Canada, records of costs and prices at each stage of distribution and a review of tendencies toward monopoly and methods which were used in suppressing competition.

In prosecutions in the province of Quebec, based on matters disclosed in the report, ten corporations were convicted under the Combines Investigation Act and Section 498 of the Criminal Code on charges of preventing or lessening competition unduly and to the detriment of the public and of unduly limiting facilities for supplying and dealing in certain classes of coal and coke. The companies were acquitted on counts alleging undue or detrimental fixing of common prices, enhancing of prices and acquisition of interests in the business of other persons. One company which was engaged in stevedoring operations, and which was affiliated with the leading Canadian firm importing British anthracite, was acquitted on all charges. Reports referring to the court judgments in the case were published in the LABOUR GAZETTE in the issues of January, 1934 (pp. 30-35), November, 1934 (pp. 1002-3), February, 1935 (pp. 145-6), and July, 1935 (p. 709).

#### **Closing of relief camps and measures for re-employment**

Replying to a question by Mr. A. A. Heaps (Winnipeg North) as to what alternatives the government had in view in closing the relief camps, the Hon. Norman McL. Rogers, Minister of Labour, in the House of Commons on February 26, stated the government recognized that in so doing, every effort must be made to provide employment for those now on the strength of the camps who are employable, adding that these camps would be closed progressively. He anticipated that present arrangements would permit their termination at a date not later than July 1 of the present year. Continuing, the Minister announced that preliminary arrangements had already been made for setting up machinery which will absorb from time to time those on the strength of the camps who are employable, and that "as a result of negotiations with the Canadian National Railways and the Canadian Pacific Railway through the Minister of Railways and Canals (Mr. Howe) arrangements have been made whereby 10,000 men will be employed on deferred maintenance work on the trackage of these companies during the coming summer. This work will be in addition to the usual maintenance work of the railways.

It will be undertaken on a co-operative basis, provision for which will be proposed in the emergency supplementary estimates. Men taken from relief camps by the railroads will be in private employment and on a basis of work and wages."

Referring to possible avenues of employment and alternative measures, the Minister declared: "It is proposed to encourage a greater measure of co-operation between the provinces and the Dominion in the working out of a more intensive application of the farm placement scheme, a scheme which has to date been followed quite extensively by some of the western provinces with very satisfactory results. Forest conservation, easier access to mining areas and other development projects would be other outlets for employment, and it is anticipated that these opportunities I have suggested for employment will absorb the bulk of men in the camps who are fitted for this class of work.

"It is expected that through the instrumentality of the proposed national employment commission, working in co-operation with business and industrial undertakings, additional avenues of employment will be found. A greater degree of co-operation will be sought in the national interest between the government and those agencies which have the power and understanding to meet the problem. ....Returns are now being received from all camps which will indicate the age and occupational classification of the camps' population and will be used as a guide in planning for re-employment of those who are employable. The government feels that it has a special responsibility at this time, in first seeking to find employment for those men who are in the camps, if the plan to close the camps is to be carried out successfully. Once this has been done, continuous efforts will be put forth to secure employment for all those who are employable. The unemployables will have to continue to be, as at present, charges of the provincial and municipal governments."

#### **Increased allowance in relief camps**

In concluding the above statement on the closing of relief camps, the Minister of Labour also announced the government's decision to increase the present allowance of 20 cents per day to \$15 per month as from March 1.

This part of the Minister's statement continued: "All other allowances, such as food, clothing, medical care, tobacco, etc., will remain the same as at present. This monthly allowance of \$15 will be paid out as follows: \$7.50 in cash, the other \$7.50 being set aside

until such time as the man leaves the camp, when he will receive non-negotiable vouchers payable at the rate of \$4 a week at any post office, for the total balance standing to his credit. This ensures that if a man leaves a camp of his own free will, he will at least have some means of support while he is seeking industrial re-establishment."

#### **Repeal of Economic Council of Canada Act.**

A Bill to repeal the Economic Council of Canada Act, sponsored by J. F. Pouliot (Temiscouata) received its three readings in the House of Commons on February 27, and its first reading in the Senate on March 4, 1936. This measure had been enacted at the 1935 session of Parliament (LABOUR GAZETTE, May, 1935, page 411), and provided for the establishment of a body of specialists in social and economic problems.

In speaking on the resolution, the Prime Minister, Rt. Hon. W. L. Mackenzie King considered an Economic Council "superfluous" when "the present government is in a position to command at any time the services of any members of the public service."

#### **House of Commons again discusses pensions for the blind**

Introduced by Mr. T. F. Donnelly (Wood Mountain), the House of Commons on March 9, discussed a resolution proposing an extension of the benefits of old age pensions to blind people over forty years of age. A similar measure was introduced in the House of Commons at the 1935 session and action deferred (LABOUR GAZETTE, February, 1935, page 100; March, page 304; April, page 312; and July, page 625). In speaking to the resolution, which received support from all sides of the House, the Hon. C. A. Dunning, Minister of Finance, stated the government was favourable to it, but added that "the practicability of immediate action, of legislation at this session, is very doubtful.... in view of the state of the country's finances."

#### **Operations under Dominion Housing Act**

Loans under the Dominion Housing Act, up to February 25, numbered 113, amounting to a total of \$755,900. These loans were classified as follows:

Loans not exceeding \$3,000, eight; \$3,000 to \$4,000, 17; \$4,000 to \$5,000, 22; \$5,000 to \$6,000, 12; \$6,000 to \$7,000, 17; \$7,000 to \$8,000, 20; \$8,000 to \$9,000, nine; \$9,000 to \$10,000, one; over \$10,000, seven.

This information was given in the House of Commons by Hon. C. A. Dunning, Minister of

Finance, in reply to a question by Mr. A. A. Heaps (Winnipeg North).

Hon. Mr. Dunning also announced recently a competition, open to all architects in Canada—with cash prizes ranging from \$50 to \$500—for designs submitted for an "average Canadian family" house, containing at least three bedrooms.

Under the provisions of the Dominion Housing Act, enacted at the last session of Parliament (LABOUR GAZETTE, May, 1935, page 412 and July, page 624) it is made possible for a person wishing to build a residence to obtain 80 per cent of the cost through a lending company at maximum interest rate of 5 per cent with 20 years to pay off the amortization and interest costs.

#### **Social measures of provincial Legislatures**

Amendments to certain provincial enactments in the sphere of social legislation were forecast in the Speech from the Throne at the opening of the Legislatures

of Ontario, Manitoba, Saskatchewan, Alberta, British Columbia, New Brunswick, and Nova Scotia.

In Ontario, there was noted "a definite improvement in commerce and industry with a consequent gain in employment, which has already had a considerable effect on relief rolls." The provincial Department of Labour was credited with having "made marked progress in stabilizing wages and hours of industry to the advantage of both employer and employee." Legislation to amend the Minimum Wage Act and the Apprenticeship Act is to be submitted.

In Manitoba, the Speech announced that approval would be asked of a project for the public development of marsh land resources for fur trapping and fur farming purposes "as a means of providing a measure of employment." The proposed legislation included amendments to the Workmen's Compensation Act and revision of the Child Welfare Act.

The Speech from the Throne, opening the Saskatchewan Legislature, "noted the distinct improvement in conditions throughout Canada as well as in our own province." It was pointed out that just when drought conditions seemed terminated last summer, large areas were afflicted by the scourge of rust. In spite of this, however, it was considered that the "rural relief problem is lessened." Attention was drawn to another urgent problem confronting the government in the re-establishment on a self-sustaining basis of thousands of settlers who had moved from drought affected areas to the frontier sections of the North and had settled upon the wooded lands. The majority

of these were without facilities for bringing sufficient land under cultivation to permit them to be self-supporting. Legislation is to be submitted respecting relief, provision of seed grain and the creation of water districts, etc., and among the enactments to be revised is the Minimum Wage Act.

In Alberta, in addition to the submission of "a measure leading to the formulation and adoption of a plan based upon the principles of Social Credit," the Speech indicated that "definite action should be taken through which capital may be made available" to citizens in building programs. Other measures forecast were a revision of public health services and a general review of the Workmen's Compensation Act.

In the British Columbia Legislature, there was no direct reference in the Speech from the Throne to specific legislation that would be introduced. However, it was intimated that in respect to some phases of provincial activity, legislation would be submitted at the present session, and additional legislation at a probable fall session.

Among the features of the Speech from the Throne at the opening session of the New Brunswick Legislature, was the announcement of a proposal to establish a department of federal and municipal relations. It was also announced that "a sound colonization plan would be carried out with the assistance of the federal government. In this back-to-the-land program, basic considerations would be the proper selection of location, soil and settlers, effective supervision and continuous co-operation." Further, "in order to assist the agricultural industry to overcome handicaps and promote improvements, serious study will be given to credit unions, mutual farm insurance and co-operative production and marketing." Other features include: Amendment of the Workmen's Compensation Act "in respect of medical practices and hospitalization which will secure full benefits to employees without unduly burdening industry"; and the appointment of a fair wage officer "with power to investigate labour conditions and ensure reasonable wages."

The speech from the Throne opening the Nova Scotia Legislature forecast early proclamation of the act setting up a Department of Municipal Affairs for the province, and stated legislation would be introduced to amend the act relating to the constitution, powers and privileges of the House, and to amend the Succession Duty Act, the Education Act, the Workmen's Compensation Act, Coal Mines Regulation Act, Public Highways Act, Children's Protection Act, Gasoline Licensing Act, and other public statutes.

### Safety awards to Quebec industries

The Accident Prevention Association of the Province of Quebec has recently announced awards of shields to firms operating for long periods without a lost time accident. In reporting to the executive committee of the Association, Mr. Arthur Gaboury, general manager, considered that the year 1936 had already showed a splendid record in this respect with three large industrial plants being awarded shields. These were: The Dominion Rubber Company which operated 1,148,400 man hours without a lost time accident; the Steel Company of Canada, Limited, which showed a record of 1,030,000 man hours without a lost time accident, and the Goodyear Cotton Company, Limited, with a record of 1,622,625 man hours without a lost time accident.

Two shields were awarded in 1935 and one in 1934, the recipients being the Canada Cement Company Limited (529,085 man hours without an accident); the Canadian Celanese Company (5,967,631 man hours) and the Canadian Iron Foundries plant at Three Rivers (712,096 man-hours).

Seven "Orderliness" diplomas have also been issued to plants in the province which have shown exceptional merit in keeping their premises in good order. These were: the Acton Rubber Company, Limited, of Actonvale, the Dominion Manufacturing Company, the Eagle Pencil Company of Drummondville, the Hump Hairpin Manufacturing Company of St. Hyacinthe, the cooperage department of the Steel Company of Canada, the Yamaska Garment Company of St. Hyacinthe, and the Needlecraft Mills Company of St. Hyacinthe.

### Apprenticeship training in Nova Scotia

In a supplement to the report of the Superintendent of Education for Nova Scotia, Dr. F. H. Sexton, Director of Technical Education for the Province and President of the Nova Scotia Technical College, discusses the extension of technical education into the field of apprenticeship training.

As pointed out by Dr. Sexton, young men who are assisted in this new extension of activity are all engaged in earning their living as indentured apprentices in various trades and are following ten different occupations in building, engineering, and ship construction. The period of apprenticeship is four years in all cases. Class instruction is conducted at the Nova Scotia Technical College, and the men are excused from their employment for two half-days per week for this purpose. The subjects taught are English, mathematics, physics, chemistry, electricity, and drafting.

As in other schools, the apprenticeship training is of a practical nature. Dr. Sexton observes that the outstanding feature of the new form of apprenticeship lies in the fact that it includes not only the learning of craft proficiency but also formal technical training. Another feature is the provision by the employer for a whole working day a week of free time for the learner to attend classes in formal instruction.

### Extension of unemployment insurance to agriculture in Great Britain

The British Government's Bill extending unemployment insurance to agricultural workers (including those employed in horticulture and forestry) received its second reading in the House of Commons on February 7. In the main, the Bill follows the recommendations of the Unemployment Insurance Statutory Committee (LABOUR GAZETTE, March, 1935, page 245).

As outlined in the British Ministry of Labour Gazette, Clause 1 of the Bill proposes to make employment in agriculture (including horticulture and forestry) insurable, provided that it is not (i) the employment of sons, daughters or certain other near relations specified in the first schedule to the Bill; or (ii) employment in the harvesting or gathering of flowers, fruit, peas or potatoes, or in the tying, training or picking of hops, or in the peeling of onions, where the person employed is not normally employed in insurable employment; or (iii) employment as a private gardener.

It is further proposed that the Minister should have power to bring within the scope of the scheme, under special conditions, certain types of manual labour contracting.

Under Clauses 2 and 3, special rates of contributions and benefits are prescribed in relation to agricultural employment. The rate of contribution will be 4½d. each from the employer and the employed person in respect of an adult man, with corresponding rates for other classes; the weekly rate of benefit for an adult man will be 14s. with corresponding rates for other classes. The rates of increase of benefit in respect of dependants will be 7s. for an adult dependant, and 3s. for the first dependent child and 2s. 6d. for each subsequent one, so, however, that the rate of agricultural benefit shall not exceed 30s. in all.

It is estimated that approximately 750,000 persons will be thus brought within the scope of the Act, and that the rate of unemployment would be about 7·5 per cent on the average.

The increased charge to the Exchequer arising from this Bill is estimated to be at the annual rate of about £600,000.

### Development of compulsory social insurance

According to information received by the International Labour Office, there are at present in the field of social insurance: 130 compulsory accident insurance workmen's compensation schemes in 54 countries; 45 compulsory sickness and maternity insurance schemes in 31 countries; and 75 compulsory invalidity, old-age, and widows' and orphans' insurance schemes in 30 countries.

Compulsory sickness and maternity insurance covers about 90 million, and compulsory invalidity, old-age and widows' and orphans' insurance over 100 million workers throughout the world. When the new United States legislation comes into operation (on January 1, 1937) the number of persons insured against old-age will be over 125 million.

The legislation on industrial accident insurance or workmen's compensation is much wider in scope, but it is impossible to give a general estimate of the number of workers covered.

The list of schemes mentioned above is by no means complete. For instance, it mentions only incidentally, for certain countries, the legislation on compulsory insurance for railway workers, although everywhere these workers are covered by special schemes. No mention is made of insurance legislation for the officials of the State, provinces, departments, or communes, who are also covered by special schemes in nearly every country.

If all the general and special schemes of compulsory insurance and workmen's compensation and the non-contributory pension schemes could be taken into account, it would be found that there are present some 400 laws for the protection of the workers or their families against the risks of industrial accident, sickness, maternity, invalidity, old-age and death.

This information is taken from a general study on the whole question, entitled *The International Labour Organization and Social Insurance*, in which the I.L.O. gives an account of the work done and the results obtained in the field of social insurance during the past fifteen years.

Reference was made in the LABOUR GAZETTE, August, 1935, page 713 to the first bulletin published by the Industrial Law Research Council of the Workers' Educational Association of Ontario. The second bulletin on this series was described in the LABOUR GAZETTE of January, page 85. The third bulletin entitled, "Collective Labour Agreements Extension Act, Quebec," has recently been published.

Correspondence courses have been made available to men in relief camps in Manitoba, according to the 1934-35 report of the Department of Education for that Province which has recently been received. The eight camps established throughout Manitoba took advantage of educational facilities thus made available to them. The total enrolment was 248. Subjects which made the greatest appeal to the men were automobile mechanics, business man's English, radio, drafting, steam engineering, business arithmetic and electricity.

According to a statistical summary given in the Report of the Superintendent of Education for the Province of Manitoba, covering the period July 1, 1934, to June 30, 1935, there were 4,396 teachers employed, 1,102 being male teachers and 3,294 females. The total of teachers' salaries paid for the year was \$3,954,077.83. The number of pupils enrolled was 144,741.

In the Speech from the Throne opening the Ontario Legislature, reference was made to the "excellent preventive work" of the Provincial Department of Health in its campaign against disease. It was further announced that some time ago arrangements were made for radium from the Congo for the treatment of cases of internal cancer. These arrangements have been cancelled and supplies are now obtained from within the Province at much less cost.

During the month of February 4,428 accidents were reported to The Ontario Workmen's Compensation Board, this being an increase of 12 over the number for January, and compares with 4,628 during February a year ago. The fatal accidents numbered 31, as compared with 17 during January. The benefits awarded amounted to \$438,335.79, of which \$346,914.75 was for compensation and \$91,421.04 for medical aid.

The average value per acre of occupied farm lands in Canada, including improved and unimproved land together with dwelling houses, barns and all other farm buildings, is reported as \$24 in 1935 as compared with \$23 in 1934. By provinces, the average values are as follows, with the values for 1934 within brackets: Prince Edward Island \$31 (\$34); Nova Scotia \$31 (27); New Brunswick \$25 (\$24); Quebec \$41 (\$34); Ontario \$42 (\$41); Manitoba \$17 (\$17); Saskatchewan \$17 (\$16); Alberta \$16 (\$16); British Columbia \$58 (\$60).

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

AN application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour during February from employees of the Canadian Pacific Railway Company at West Saint John, N.B., being subforemen, checkers, coopers, sealers, heatermen and freight handlers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute relates to the employees' request for increased wages, 600 men being directly affected. The matter of the application has been taken up with the employing company.

On February 20, His Honour Judge G. F. Mahon, of Walkerville, Ontario, was appointed third member and chairman of the Board of Conciliation and Investigation established to deal with a dispute between the Hamilton Street Railway Company and certain of its employees being members of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America. The appointment was made by the Honourable Mr. Rogers, Minister of Labour, in the absence of a joint recommendation from the other board members, Messrs. John A. Munro, of Hamilton, and Fred Bancroft, of Oakville, nominees of the company and employees respectively. The dispute relates to wages and hours of labour, 303 employees being directly affected.

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1936

THE following table shows the number of disputes, workers involved and time loss for February, 1936, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb., 1936 .....	6	2,902	18,987
*Jan., 1936 .....	4	205	1,105
Feb., 1935 .....	8	1,551	16,315

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts increased slightly during February but a comparatively large number of workers were involved owing to the occurrence of a strike of cotton factory workers at Three Rivers, P.Q., involving nearly

2,000 employees, and a strike of over 1,000 dressmakers in Toronto, Ont. As the first of these lasted for ten days, the time loss was correspondingly large. None of the disputes during January had involved large numbers of workers for any considerable time. Disputes during February, 1935, were slightly more numerous but strikes of coal miners at Corbin, B.C., and at Springhill, N.S., accounted for most of the employees involved and the time loss incurred.

There were no disputes carried over from January but six disputes commenced during February, of which five terminated during the month, one resulting in favour of the employer, one in favour of the workers, one resulting in a compromise, one being partially successful, while the result of one is recorded as indefinite. At the end of February, therefore, there was on record one dispute recorded as a strike or lockout, namely: waiters, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involved thirteen temporary employees in a greenhouse at Brampton, Ont., who ceased work at noon on February 26, when their demand for 18 cents per hour instead of 12 cents and 15 cents then being paid was refused. The employer stated that they were employed chiefly to relieve the unemployment situation and it was not necessary to replace them although there were many applicants.

A minor dispute involved seven elevator operators in one building in Toronto for three hours, in a demand for an increase in wages from \$18 per week to \$20 and a reduction in hours from 66-67 per week to 48. When the management agreed to discuss conditions later, work was resumed.

A strike of gold miners at Camborne, B.C., in January was noted in the February issue of the GAZETTE. Reports have since been secured indicating that twenty-four men ceased work on January 8 against a reduction in wages from \$4-\$4.50 per day of eight hours to \$3.50-\$4, most of them resuming work on January 10 without securing their demands. The remainder were replaced.

A dispute involving eleven tailors and tailoress in one ladies' custom tailoring establishment in Toronto, Ont., from February 11 to February 25, 1936, occurred but full reports have not yet been received. It appears that some of the employees were on weekly wages at \$25 per week and others on piece-work and that the employer put them all on piece-work. The International Journeymen's Tailors' Union called a strike and proposed that an agreement with the union should be made providing for increased wages. This was refused but the employer restored the previous conditions and work was resumed.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

SHOE FACTORY WORKERS, GALT, ONT.—A number of the employees in one establishment ceased work on February 10 when the demand of the Canadian Shoe Workers' Union for the reinstatement of three cutters was refused. The strikers claimed that they had been dismissed for union activity but the management stated that on the type of work being done fewer cutters were required and further that it was not known that two of the three discharged were members of the union. The establishment was closed down,

affecting about three hundred workers altogether. As a result of the mediation of the Mayor a compromise was reached as to the re-employment of the discharged men and work was resumed on February 21.

WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.—Employees in about sixty-five establishments in Toronto ceased work on February 4 demanding the renewal of agreements with the Industrial Union of Needle Trades Workers with amendments providing for wage increases. On the following day work was resumed in forty-five establishments which had signed the agreements and on the next day in ten other establishments for which agreements were signed. The strike was reported as being called off by the union on February 6, but negotiations with the remaining firms were expected to be carried on with a view to settlements.

COTTON FACTORY WORKERS, THREE RIVERS, P.Q.—A number of the employees in one establishment ceased work at 11 p.m. February 18 as the night shift began, demanding an agreement with the United Textile Workers of America providing for an increase in wages of fifteen per cent, the recognition of a committee of employees and the establishment of a joint committee to deal with grievances. The establishment was closed down, affecting 2,000 workers. Representatives of the Department of Labour arrived in Three Rivers on February 21 and interviewed the management and representatives of the strikers. The latter agreed to drop their demand for union recognition and for an increase in wages but wished to have a committee of five instead of the existing committee of forty-five, which included one representative from each department. The management refused this but offered to re-employ the strikers without discrimination. It appeared that a small number of employees had been laid off as not being needed, including the president of the union, and one had been dismissed for cause. Reinstatement of these was refused. A settlement was not reached but on February 29 the strike was called off when the strikers were informed by the Minister of Labour that the Royal Commission on the Textile Industry would investigate the affairs of the company.

MACHINISTS, ETC., INGERSOLL, ONT.—A number of employees, machinists, etc., in an establishment manufacturing automobile parts, ceased work on February 17, alleging that some employees had been dismissed for joining the International Association of Machinists

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1936\*

Industry, occupation and locality	Number of em- ployees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to February, 1936.			
NONE—			
(b) Strikes and Lockouts Commencing during February, 1936.			
MANUFACTURING—			
<i>Boots and Shoes—</i>			
Shoe factory workers, Galt, Ont.....	80	800	Commenced Feb. 10, 1936; against discharge of workers; terminated Feb. 20, 1936; compromise.
<i>Textiles, Clothing, etc.—</i>			
Dressmakers, Toronto, Ont...	1,150	2,000	Commenced Feb. 4, 1936; for renewal of union agreement with increased wage rates and im- proved conditions; terminated Feb. 6, 1936; partially successful.
Cotton factory workers, Three Rivers, P.Q.....	1,600	16,000	Commenced Feb. 18, 1936; for increased wages, union recognition and changes in conditions; ter- minated Feb. 29, 1936; indefinite.
<i>Metal Products—</i>			
Machinists, etc., Ingersoll, Ont.	45	70	Commenced Feb. 17, 1936; against discharge of workers for union activity; terminated Feb. 18, 1936; in favour of employer.
CONSTRUCTION—			
<i>Buildings, etc.—</i>			
Carpenters and labourers, Charlottetown, P.E.I.....	20	40	Commenced Feb. 6, 1936; for increases in wages; terminated Feb. 7, 1936; in favour of workers.
SERVICE—			
<i>Business, etc.—</i>			
Waiters, Vancouver, B.C.....	7	77	Commenced Feb. 18, 1936; for increase in wages and payment of arrears; unterninated.

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

and picketed the establishment, which had 170 employees. The management stated that the men had been dismissed for other reasons. A conciliation officer of the Department of Labour, in November, 1935, had brought about a settlement of a dispute over the same point, a strike being threatened, and again visited Ingersoll on February 18. By this time about one-half of the strikers had returned to work. The management agreed to re-employ nearly all of the strikers, and the dispute was called off and work fully resumed next day.

CARPENTERS AND LABOURERS, CHARLOTTETOWN, P.E.I.—Employees on one remodelling building project ceased work on February 6 demanding increases in wages to 45 cents per hour for carpenters and 35 cents for labourers. The contractor had raised the rates from 30 cents to 35 cents for carpenters and from 20 cents to

25 cents for labourers and during the strike offered to increase the rates to 40 cents and 30 cents respectively, but this was refused. On February 8 work was resumed, the demands of the strikers being conceded.

WAITERS (RESTAURANT), VANCOUVER, B.C.—Waiters, members of the hotel and restaurant employees union, ceased work on February 18 demanding increases in wages from \$10 per week and board to \$12 and payment of wages due in recent weeks. At the end of the month a settlement had not been reached but arrangements had been made for negotiations.

The appointment of Thomas Mullins Molloy, Commissioner of the Saskatchewan Bureau of Labour and Public Welfare, to the chairmanship of the Provincial Minimum Wage Board is announced in a recent issue of the Saskatchewan Gazette.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1936, in the review of Strikes and Lockouts in Canada and Other Countries, 1935. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only one each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in January was 38 and 15 were still in effect from the previous month, making a total of 53 disputes in progress during the month, involving 16,900 workers with a time loss of 114,000 working days.

Of the 38 disputes beginning in January, 6 were over demands for increases in wages, 4 over proposed wage reductions, 13 over other wage questions, 6 over questions respecting the employment of particular classes or persons, 4 over other questions respecting working arrangements, 5 over questions of trade union principle. During the month, settlements were reached in 39 disputes, of which 7 were settled in favour of workers, 14 in favour of employers, 18 resulted in compromises. In 4 other disputes, work was resumed pending negotiations.

After an eight day strike, 10,000 workers of the Smithfield meat market, London, voted February 10 to return to work pending further negotiations. The dispute was over a demand for increased wages and shorter hours.

### United States

The number of disputes beginning in December was 87 and 110 were still in progress from the previous month, making a total of 197 disputes in progress during the month, involving 62,000 workers, with a time loss of 816,000 working days for the month.

In the millinery industry in New York City, 20,000 workers went out on strike February 4 to secure the establishment of better

means of enforcing union agreements. The next day an agreement was reached which provided for the establishment of a commission to co-ordinate the various factors of the industry, this commission to have power to examine the employers' payrolls. Each manufacturer was to sign the agreement before his workers returned to work.

A strike of 4,000 ladies' garment workers at or near Boston, Massachusetts, began February 27 to secure new agreements restoring the hours and working conditions that prevailed under the National Recovery Administration code and also for increased wages and union recognition.

About 14,000 tire and rubber workers were involved in a strike which began February 17 at Akron, Ohio. The original cause of the strike was the lay-off of a number of workers without the notice which the workers demanded.

A strike of elevator operators and other building service employees in apartment houses and in some other large buildings in certain parts of New York City began March 1. The demand was for increased wages and shorter hours. Various disorders occurred. The Mayor of the city was mediating between the parties to the dispute but no settlement had been reached by March 9.

A general strike in Pekin, Illinois, involved 4,500 workers and lasted for two days. It was in sympathy with a strike at a manufacturing establishment. Both the original strike and the general strike were settled February 7.

The operation of salestands, lunch counters and cafeterias has proved an admirable means for the gainful employment of a select number of blind people, according to a report recently issued by the Quebec Division of the Canadian National Institute for the Blind. During the year ending March 31, 1935, nineteen such stands were maintained by this Division with net profits to the blind operators of \$15,599.87, or an average of \$873.67 per stand.

Reference was made in the *LABOUR GAZETTE* for November, 1935, page 977, to the objects and activities of the National Youth Administration program in the United States. The administration has recently issued a pamphlet which reviews its program in operation, outlining its policies and organization and then dealing with its activities such as student aid, work projects, vocational guidance and junior placement, camps for unemployed women and apprenticeship training.

## INVESTIGATION INTO TEXTILE INDUSTRY

### Appointment of Royal Commission to Conduct Inquiry

**I**N the Speech from the Throne opening the Dominion Parliament, reference was made to the appointment of a Royal Commission to inquire into conditions in the textile industry (LABOUR GAZETTE, February, page 105). This Commission was appointed by Order in Council of January 27, the full text of the Order being as follows:

"The Committee of the Privy Council have had before them a report, dated January 24, 1936, from the Minister of Finance, stating as follows:

"On the 18th instant the following telegram, dated at Sherbrooke, Quebec, January 18, 1936, and signed by Ant. Deslauriers, City Clerk, on behalf of the City Council of the City of Sherbrooke, was received by the Right Honourable the Prime Minister, and the Honourable the Minister of Finance:—

Special emergency meeting City Council held today strongly ask that your Government intervene immediately over the situation that has developed whereby our largest flat silk industries employing over a thousand hands has suddenly closed down leaving these people without employment STOP. Our City unable to cope with alarming situation and request your Government take immediate steps to remedy this condition STOP. City cannot take care of such increased unemployment.

"Also on the same date representations appeared in the press to the effect that according to word received from Sherbrooke uncertainty in the textile market, due in large part to Japanese competition in certain artificial silks, had forced the Dominion Textile Company to close its rayon plant at Sherbrooke, Quebec, and that the plant closed down would remain inactive until the present situation in the industry had been clarified. The Montreal Gazette of January 18, also contains the following relative to the foregoing representations:—

G. Blair Gorden, President of the Dominion Textiles, who is in the United States at present, last night confirmed the report in reply to a telegraph query. His message added (Hope to re-open when we can see possibility of manufacturing goods which can be sold.)

"Upon receipt of the telegrams from the City Council of Sherbrooke, an officer of the Department of Labour was immediately sent to Sherbrooke to report to the Government upon the existing conditions. The report received by the Government evidences the necessity, if the Council of Sherbrooke is to be met and the present situation in the industry clarified, for investigation much more searching and extensive than is possible at the present time either by officials of any of the

Government Departments or by the Tariff Board, and that it can most effectively be made by the appointment of a Royal Commission, clothed with powers to make the inquiry as searching and extensive as may be necessary.'

"The Minister observes that the sudden cessation of operations in industrial establishments, especially in the winter season, at a time of widespread unemployment, cannot fail to render more acute the distress and suffering of wage earners and their dependents, and also places upon municipalities and governments additional and unexpected financial burdens for relief. He is further of the opinion that industry generally and especially an industry which has had for years the benefit of the protection afforded by the customs tariff, should recognize its responsibility to carry on operations with due regard to its obligations to employees and to the public, and not to arbitrarily shut down its plants.

"The Minister further observes that in order to determine the responsibility of employers and to enable appropriate action to be taken, not only with regard to safeguarding the interests of employees and of the public, but also of the industry itself, it is essential for the Government to be fully advised with respect to all matters surrounding the operations and conduct of the industries immediately concerned and inter-related and allied industries.

"That in this connection it is essential that full and complete information be available to the Government covering a period of years with respect to costs, profits, wages, salaries and bonuses, tariff protection, investment, volume of production, and all other matters and things which together with information already available to the Government will enable sound conclusions to be reached regarding the position of this and other branches of the textile industry in relation to British and foreign competition, and in particular, the extent to which the employer can reasonably and properly be expected to maintain employment over periods of temporary difficulty.

"The Minister recommends that for the purpose of making the said inquiry and examination, including the causes of the existing or any other such sudden cessation of industrial operations as may be referred to him, the Honourable W. F. A. Turgeon, of the Court of Appeal of Saskatchewan, be constituted a Royal Commissioner, under Part 1 of the Inquiries Act, Chapter 99 of the Revised Statutes of Canada, 1927, for the purpose of

making such inquiry and examination, and that such Commissioner have the special authority specified under part 3 of the said Act.

"The Minister further recommends that the Commissioner be instructed to make his report as speedily as possible.

"The Committee concur in the foregoing recommendations and submit the same for approval."

Subsequently, Mr. J. C. McRuer and Mr. E. Beaugard were appointed Commission Counsel, and the organization session, presided over by the Hon. W. F. A. Turgeon, was held on February 20. After the preliminary formalities, Mr. McRuer set forth the approach to the inquiry as follows:

"The textile industry is an industry that has for years had the benefit of the protection afforded by the Customs tariff. It will be the duty of the Commission to inquire, among other things, into the economic results of the protection afforded this industry. As I conceive the Order in Council, it will be our duty to bring before the Commission

- (a) The facts respecting the tariff protection afforded the industry over a period of years;
- (b) The investment of capital in the industry and the return on invested capital.
- (c) The salaries and bonuses paid to executive officers;
- (d) Wages paid to employees and other matters pertaining to their interests.

"It will be our duty to determine how far the burden of protection, which ultimately must be borne by the consuming public, has been passed on to workmen employed, and how far it has been absorbed by those otherwise interested in the industry.

"We will have to inquire into the mechanization of the industry for the purpose of determining how far the protection afforded to the industry is a protection to the production of machines and how far it is a protection to the product of labour. We will have to determine to what extent the industry has, enjoying a protective tariff, made profits which have been distributed, whether by payment of large dividends or by other financial re-adjustment, and how far the industry has conserved profits made in times of prosperity for the benefit of the wage-earners and their dependents in time of depression.

"It will be our duty to give careful and particular attention to determining the justification for any branches of this industry suddenly and arbitrarily ceasing operations, thereby causing wide-spread distress among their employees.

"It will be our duty to gather full and complete information in regard to all matters af-

fecting the industry and its branches, in order that the Government of the Dominion may reach sound conclusions in regard to the course to be taken in the future. It will, of course, in this regard be necessary for the Commission to consider British and foreign competition in the industry and the rights of the consuming public in regard thereto.

"I respectfully suggest that the rights of labour and the consuming public should receive our first and paramount attention. As the rights of labour are most urgent, I tentatively suggest, subject to discussion with those representing the textile industry, that the Commission should proceed at any early date to hold sittings at several of the centres where there are large textile mills, that the Commission should visit the mills and be in a position to observe the process of manufacture, the treatment of employees, and that the Commission should, while visiting these mills, hold public hearings for the purpose of giving those interested an opportunity to place facts before the Commission."

In conclusion, the Commission Counsel invited "the assistance of the citizens of Canada in carrying on with our work and those who have matters that they think will be of importance to the Commission are asked to place them before us at any time. We particularly invite those interested in the welfare of the employees engaged in the industry to co-operate with us and we assure them that we will place all relevant information at our disposal before the Commission."

Production of automobiles in Canada during January numbered 13,302 units against 13,775 cars made in December and 10,607 cars in January of a year ago. This month's output included 11,261 passenger cars and 2,041 trucks; 7,167 of the passenger cars and 1,053 trucks being intended for sale in Canada and the balance in each case for export. Customs figures for the month show that 451 cars were imported and 6,622 exported during January as compared with imports of 264 exports of 1,598 in January, 1935.

According to a news report, wage inspectors of British Columbia recently conferred with the Hon. George S. Pearson, Provincial Minister of Labour, and with the Board of Industrial Relations. Following this Conference, the Minister is reported to have announced the possibility of merging the male and female minimum wage acts and the Hours of Work Act (all of which are administered by the Board of Industrial Relations) into one enactment.

## NATIONAL EMPLOYMENT COMMISSION TO INVESTIGATE PROBLEM OF UNEMPLOYED YOUTH

### Announcement of Minister of Labour in House of Commons

**I**N the discussion on the motion of Mr. Denton Massey, Member for Greenwood, proposing an enquiry into the need for technical training of youth and the creation of a national youth establishment commission, it was announced in the House of Commons on March 9 by the Hon. Norman McL. Rogers, Minister of Labour, that one of the functions of the National Employment Commission would be an investigation into those phases of the unemployment problem relating to youth.

Mr. Massey's motion, which was adopted, urged that "the government consider the desirability of investigating the broad question of the re-establishment of the young men and young women of Canada;" and that "in the conduct of such investigation, attention be given to the possibility of making available, to those of our youth, who are adapted for such training and who would otherwise be denied it, technical training in various branches."

In his advocacy of vocational training, Mr. Massey referred to the recommendations of the Nineteenth International Conference concerning unemployment of young persons (LABOUR GAZETTE, July, 1935, pages 658-661).

In accepting the motion, the Minister of Labour drew attention to the study given the problem in other countries, and summarized the recommendations of the League of Nations special committee on this question as follows:—

1. The abolition of child labour.
2. The adoption of compulsory school attendance for primary education where this measure is not yet in force; and, in countries where it exists, the extension of the period of compulsory school attendance
  - (a) by the addition of one or several classes to the primary schools,
  - (b) by supplementary vocational courses, and
  - (c) by the extension of the period of attendance at nursery schools.
3. The systematic transfer of unemployed families to rural areas; that is, internal colonization.
4. The institution of workers' allotments and suburban colonies.
5. Voluntary civic service in labour camps.
6. Voluntary organizations created by the young people themselves.
7. Vocational guidance and employment bureaus.
8. Technical training of a generalized character.

Inviting examination of these recommendations, the Minister pointed out that to carry out even a limited number of them would necessitate the maximum of co-operation between the Dominion and the provincial and municipal governments. Emphasizing this essential, the Minister observed:—

"If one lesson has been brought home clearly as a result of our experience in dealing with this problem of unemployment during the past few years it is this, that unless we are able to find and create a medium through which that co-operation can be secured and continued we shall not be able to deal effectively with the problem of unemployment. This resolution is simply an illustration, I believe, of the imperative necessity of securing that co-operation. Whatever may have been our failures in the past, we are confronted with an existing situation, serious in itself, which demands our united efforts. And it is with this in view that the present administration proposes to set up a national employment commission which is designed to secure that degree of co-operation, not only between governments, but also between governments on the one side and private industry on the other, in order that we may attain a maximum of united effort along the whole front of our economic life."

Referring specifically to the object of the motion, and to this special problem of youth, the Minister, on behalf of the government, stated:—

"It will be possible, in setting up a national employment commission, to provide for a special committee which shall investigate those peculiar features of the unemployment problem which relate to youth. I hope that as a result of such an investigation it will be found possible for this government, working in co-operation with other governmental agencies in Canada, to arrange for improved educational facilities and a better correlation of vocational schools and employment services than now exists. I hope too that it may be possible to revive in some degree an apprenticeship system in this country, although that will require also the co-operation of private industry and of labour organizations."

Commenting on requests from delegations received by "this government and previous governments," the Minister wondered "whether the time has not come when in connection with this whole problem of unemployment this government is not entitled to send delegations to industries and to associations of industries

and commercial organizations in this country. I wonder whether we are not entitled to do that and to say to them that their active co-operation is vitally necessary if we, with them, are to deal constructively with this problem of unemployment."

He then outlined what he considered to be a basic requirement in any realistic approach to the broad problem of unemployment, namely, a definite demarcation of the employable and the unemployable, together with a classification of the relief rolls according to age and occupational groups—a work which is now progressing under the direction of the federal Department of Labour in co-operation with the provinces and municipalities.

In conclusion, the Hon. Mr. Rogers declared:—

"I would repeat that the government is fully in sympathy with the re-establishment

of the youth of this country and, like any government conscious of its responsibility in relation to unemployment at this time, we will take every possible step to see to it that young men and women are given opportunities within which they may realize their desire for remunerative employment. I do not believe the youth of this Dominion expect ready-made jobs, nor do I believe that the solution for unemployed youth lies in public employment. If I did believe that I should have some misgivings for the future of Canada. It is our duty to create conditions within which our Canadian youth may once more, as in other years, find their own opportunities and make the most of them."

## CANADIAN CONSTRUCTION ASSOCIATION

### Summary of Proceedings at Eighteenth Annual Convention

WITH a large and representative attendance from all parts of the Dominion, the eighteenth annual convention of the Canadian Construction Association was held in Hamilton recently. As indicated in the official report of the proceedings, the chief objective of the gathering was "to seek and remove the causes retarding recovery in building as compared with other industries."

In summarizing the work of the convention, the official report stated:—

"Thoroughly canvassed were such influences as the rising cost of workmen's compensation and increasing taxation, factors, which it might be supposed, were militating against the undertaking of construction, and definite proposals were submitted with the end in view of minimizing their effect.

"Constructively, too, the convention, in keeping with its slogan, devoted considerable attention to ways and means of stimulating activity. The effect of the public works program instituted by the Dominion Government under the Public Works Construction Act, 1934, and the Supplementary Public Works Construction Act, 1935, was examined minutely. It had resulted, it was agreed, in the creation of a large amount of employment, both directly and indirectly. Deciding, however, that extraordinary expenditures on public works were disadvantageous, ultimately, to the best interests of the industry, the convention went on record as opposing further projects of this nature at the present time. Instead, it advocated that the Federal authorities should resume their normal construction programs.

"Housing, which it is widely held, affords the best opportunity of restoring the industry to normalcy, also received in its many aspects, the consideration of the convention. Not only the provision of low-cost accommodation was touched upon, but modern developments in this field were covered in detail."

In his report on the year's activities, Mr. J. Clark Reilly, the general manager, dealt with various phases of federal policy where such came into contact with the operations of the Association as in the Public Works Construction Act, 1935, and the Housing Act. Under the heading of "Labour Relations," Mr. Reilly reported that:—

"The operation of Government contracts has brought out a number of instances, arising from classification of workmen and fair wage schedules, which have been taken up with the Department of Labour. Our representations have received the most courteous attention from the Deputy Minister, Mr. W. M. Dickson, and the Chief Conciliation Officer, Mr. Campbell."

Tribute was also paid to Dr. W. C. Clark, Deputy Minister of Finance, for his "unfailing courtesy and consideration" given to representations of the Association in regard to the Housing Act.

Dealing with the subject of legislation, the general manager referred to the Industrial Standards Act of Ontario as follows:—

"Those who favour its provisions speak strongly in its favour as a stabilizing force, but considerable criticism has developed and was expressed in some of the daily and weekly papers. Perhaps the real test of this

type of legislation will come later, as conditions improve. Meanwhile, the cost of such legislation to the owner should be carefully considered."

Featuring the report of the president, Mr. W. H. Yates, Jr., were his references to the federal public works program and to housing. Dealing with the former, the president stated:—

"The effect of the Public Works Program is quite apparent. This is indicated by the fact that the employment index had risen from 67.4 at the end of 1933 to 85.3 at the end of the third quarter of 1935. Improvement is reflected largely in industries associated with construction, such as lumbering, steel products and transportation, as well as in the building trades itself. Directly and indirectly, it has resulted chiefly from the Public Works program.

"Figures compiled by the National Construction Council, demonstrate that contracts awarded to date under the Public Works Construction Acts of 1934 and 1935, have produced or will produce 51,372,664 man hours of labour, or in other words, they have kept 32,089 men working for a year of 200 working days and, when you come to consider that 80 cents spent out of every dollar goes into labour, it gives you some idea of the spending power this program has meant to business in general throughout Canada."

Continuing, the president declared it was now a question of "whether to appeal to the government to prime the pump once more." While it might be thought that enough had been done in the way of a direct program, the president suggested that there might be "other avenues along which the Federal Government may operate." In this respect, he outlined the results of a survey of "economically justifiable projects" which had been presented by the National Construction Council to the Federal Government as an extension program. This was divided as follows: Federal Building and Engineering work valued at (about) \$89,000,000; Provincial Work, valued at (about) \$25,000,000; Municipal Work, valued at (about) \$106,000,000; Privately Controlled Work, valued at (about) \$178,000,000.

There were papers and discussions on the following subjects: Workmen's Compensation, P. N. Gross; Accident Prevention, H. J. McGough; Public Works Program, E. J. L. Stinson and W. D. Black; Taxation Methods, F. Kent; House Building, Frank McLaughlin; Modern Methods in Residential Construction, J. M. Pigott; Slum Clearance and Replacement, Dr. Milton Hersey.

## Resolutions Adopted

Among the resolutions adopted were the following pertaining to housing, apprenticeship, extension of public works program, workmen's compensation, and accident prevention. These resolutions were as follows:—

*Housing.*—"We are interested to note from reports submitted that some progress is being made in loaning money for new house construction in certain centres under the provisions of the first part of the Dominion Housing Act, 1935. We suggest to the incoming Executive Committee that representations be made to the Federal Government that, in the light of experience gained in the operation of the Act to date, suitable amendments be enacted to give greater encouragement to the investment of private capital in the field of house construction.

"Also, that the Federal Government be requested, in view of the remarkable success achieved by building societies in Great Britain, to invite one or more outstanding representatives acquainted with the work of these societies to come to Canada to assist our Government to a decision as to whether similar societies could be launched in Canada."

*Apprenticeship.*—"The Convention appreciated the courtesy of the Minister of Labour for the Province of Ontario and the Deputy Minister in visiting our sessions and explaining the proposed amendments to the Apprenticeship Act of Ontario.

"The 1936 Apprenticeship Committee of the Association, when appointed by the Executive Committee, is to be requested to study the question of the compulsory absorption of youth into industry with a view to making representations to the Governments.

"The assistance of local associations or exchanges is urged in emphasizing to the people of our Canadian centres the difficult position in which so many of the untrained young men find themselves at the present time.

"The possibility of a shortage of skilled mechanics in a number of the building trades was recognized in the event of any considerable activity in the near future. The attention of our employers is again directed to the necessity for action to secure a resumption of apprentice training and the rehabilitation in our industry of mechanics who have been compelled to seek other employment."

*Extension of Public Works Program.*—"The Association, after careful investigation, recognizes the benefits received by the various branches of our industry from the operation of the Public Works Construction Act 1934

and the Supplementary P.W.C.A. 1935. The expenditure under these Acts by various Government Departments has resulted in employment not only to skilled and unskilled labour on the jobs, but has extended to the factories where much of the material is manufactured. In some centres, had it not been for this Government work, there would have been little or no construction work undertaken.

"Recognizing, however, that the Federal Government undertook this work to provide a stimulus and encouragement to private industry, we believe that on the completion of the present program, including the contracting for the balance of the money voted, the operations of the Federal Government in the field of public works might well be limited to what might be considered normal appropriations."

*Workmen's Compensation and Accident Prevention.*—"The Convention Committee which considered these questions held several

sessions but did not feel that the information obtained on present conditions throughout the industry of Canada would warrant any definite recommendations at this time."

The officers elected were: President, F. G. Rutley, Montreal; Vice-President, Joseph Wilde, Toronto; Past President, W. H. Yates, Jr., Hamilton; Western Vice-Presidents, F. J. Hale, Vancouver, and A. W. Cassidy, Saskatoon; Eastern Vice-President, K. I. Campbell, Saint John; Honorary Secretary, L. L. Anthes, Toronto; Honorary Treasurer, E. M. Seale, Montreal.

Section Chairmen and Vice-Chairmen for the ensuing year will be: General Contractors, I. Ilsley, Toronto, and H. J. Ball, Kitchener, Ont.; Trade Contractors, William J. Bavington, Toronto, and J. P. Linton, Montreal; Manufacturing and Supply, E. G. Montgomery, Montreal, and G. M. Bartlett, Montreal. John Parkin, Toronto, is chairman of the Membership and Finance Committee.

### International Survey of Social Services

Reference was made in the LABOUR GAZETTE of March, 1934, page 249, to an "International Survey of Social Services" which was published by the International Labour Office in 1933, containing studies of the operation in 1930 of various social services in twenty-four different countries, including Canada. A second edition has now been issued of this survey, dealing with the working of social services in 1933. The first volume of the new edition deals with the social services in existence in the following nineteen countries: Australia, Belgium, Bulgaria, Canada, Chile, Finland, France, Germany, Great Britain and Northern Ireland, India, Irish Free State, Italy, Japan, Netherlands, Norway, Sweden, Union of South Africa, Union of Soviet Socialist Republics, and United States of America. It is expected that a second volume will be issued later in the year dealing with nineteen further countries as follows: Argentina, Austria, Brazil, Czechoslovakia, Denmark, Estonia, Greece, Hungary, Latvia, Luxemburg, Mexico, New Zealand, Poland, Portugal, Rumania, Spain, Switzerland, Uruguay, and Yugoslavia.

The social services which are dealt with in this survey are as follows: Social Insurance (including workmen's compensation for industrial accidents and occupational diseases; sickness and maternity insurance; invalidity, old-age, and widows' and orphans' insurance; unemployment insurance; voluntary social insurance; and subsidized benefit schemes); Social Assistance Services (including non-contributory invalidity, old-age and widows' and orphans' pensions; unemployment assistance;

assistance for aged, blind and infirm persons of insufficient means; medical assistance for persons of insufficient means; maternity assistance; assistance for children and young persons; assistance for large families; and assistance at employers' expense in case of injury, sickness or death of staff); Housing, financed by public authorities; Family Allowances; and Holidays with Pay.

Included in the annual report of the Commissioner of National Parks of Canada is a section dealing with the activities of the National Parks Branch in the matter of providing relief work.

The report indicates that under the Relief Act, 1934, 6,387 individuals were provided with relief during the fiscal year 1934-35, comprising 4,725 single, homeless men; and 493 permanent Park residents with domestic responsibilities, involving 1,169 dependents. Relief work on this basis was distributed over two periods, April 1, to July 31, 1934, and January 1, to March 31, 1935. Most of the work furnished on a relief basis during the winter of 1934-35 centred in Riding Mountain National Park, where a total of 936 single, homeless men, drawn largely from Winnipeg, were accommodated and given useful employment.

Operations under the Public Works Construction Act, 1934, commenced on August 1 of that year, and during the eight months ended March 31, 1935, employment at prevailing wages was found for the following number of men monthly: August, 2,113; September, 2,658; October, 2,841; November, 2,316; December, 440; January, 102; February, 92; March, 111.

## “EDUCATION AS A TRAINING FOR CITIZENSHIP”

### Radio Address of Hon. Norman McL. Rogers, Dominion Minister of Labour, under Auspices of Canadian Teachers' Federation

THE Hon. Norman McL. Rogers, Dominion Minister of Labour, delivered the following address over the Canadian Radio Commission System on Monday, February 24:—

I am greatly privileged to have this opportunity of speaking under the auspices of the Canadian Teachers' Federation. The general theme which will be discussed during the present week is “Education as a Training for Citizenship.” This subject is not new, but it is safe to say that it will never be old. We who have been teachers have considered it often in our quiet hours. Teachers of every age since Plato and Aristotle have thought and written on education in its relation to the state.

In these latter days of social stress and mental perplexity the education of youth for citizenship has assumed a special significance for our own generation. As a result of the shock of war and a long period of economic adversity we have been obliged to re-examine the foundations of our faith in many matters. In common with other portions of our cultural inheritance our educational institutions and methods have been made the subject of critical enquiry. All this is as it should be. We know that a blind and complacent acceptance of tradition is the greatest obstacle to human progress. We realize that our institutions must be fashioned to present and future needs. We know also that there have been many periods of revision and changing direction in the history of civilization. Usually these periods of shock and change have been a prelude to a striking advance in social welfare and material progress. The result is very largely in our own hands. The all-important thing is our approach and attitude to problems of reconstruction. We must have faith in reason and experience as our guides. With such guidance we must be as ready to cleave to that which is good in our inheritance as we are to reject that which is evil.

To my mind there is no certain virtue in any formal training for citizenship. Knowledge of political institutions is desirable and the teaching of history should throw a clear light on the manner in which these institutions have come into being. But this knowledge is, of itself, no guarantee of good citizenship. To it there must be added a sense of obligation to some ideal outside of individual well-being. Education is self-development, it is true, but it involves social adjustment as well and any concept of education which ignored instruc-

tion in social obligations would be narrow and selfish indeed.

In any system of education for citizenship it is important to make clear to growing children that duties go along with rights and that the recognition of duties to others is the only sure protection for rights which we claim for ourselves. It is equally important that the concept of duty should not be confined within narrow boundaries. The child stands, as it were, at the centre of a series of widening circles, each of which represents a form of association in which he or she seeks to satisfy the needs of body, mind and spirit, the full realization of individual personality. As one looks back over the centuries that lie behind us, it appears that the progress of man has been determined very largely by his consciousness of himself as a member of these ever-widening groups of humanity. Out of this realization of his membership in and dependence upon these various circles of association there has come a broadening conception of right and duty; and upon the cornerstone of right and duty there has been erected first the framework of the state, and in more recent times the framework and principles of international society. The circle of humanity which embraces our international relationships would seem to represent the ultimate in human association. It is the farthest removed from the individual at the centre, and the most recent form of human association in point of time. For these reasons it lacks the reality, the vitality and the intimacy of the narrower associations of family, church and nation. But while it is not so deeply rooted in our experience, the events of the past few years have given us a sobering conviction of its importance in our daily lives. Events which occur in Shanghai, Rome or London may have an almost immediate repercussion in other parts of the world. During the past few years the nations have looked hopefully toward Geneva for light and leading toward peace. We have come to realize that the narrower circles of our lives depend in very large measure upon that wider circle which embraces our international relationship. If that circle should be rent asunder, there is hardly an aspect of our common life that would not be put in jeopardy.

Another tenet in education for citizenship must be faith in hard thinking. It is said of the late Lord Haldane that, when he became Minister of War, he was far from satisfied with the willingness of the permanent staff

to break from traditional methods and suggested that every department in the War Office should be provided with a motto bearing the words "It costs nothing to think." This story carries its own moral. Lord Haldane, of course, was thinking of cost in monetary terms. In another and more profound sense, however, it costs a great deal to think, but the value received will always repay the cost in terms of effort. Hard thinking means hard work. It also means renunciation of some of the more temporal pleasures of life. There are many alleged substitutes for hard thinking and it is easy to succumb to the temptation to accept these substitutes in the place of genuine thought. Education ought to develop right habits of thinking. Those of us who are teachers must encourage at all times an attitude of curiosity and a spirit of intellectual adventure in our students. This instruction in thinking is needed especially at this time. Our country is confronted with many grave problems. We must think our way through these problems. There is no other way to meet them courageously. We must resist, at the same time, the tendency to surrender reason to emotion however benevolent our emotional reactions may seem to be. It is characteristic of a period of economic depression that irrational fear and irrational hope are often allowed to direct public policy and individual action. Many of the worst phases of modern nationalism are due to the surrender of calm reason to emotion and hysteria. Students of history will not need to be told that mass emotion has never proved to be a safe guide for public policy. What we call civilization has developed step by step with the progressive victory of reason and social consciousness over the simple emotional reactions to our environment.

Finally, I would suggest that education for citizenship in these difficult days calls for careful instruction in tolerance and charity. It may be said that this is the business of the churches. My answer would be that it is also the business of our schools. The need for charity is so imperative that it requires a united effort if we are to withstand the returning tide of prejudice and intolerance which threatens to overtake us. The time to learn tolerance and charity is in the days of our youth. Many a child at an impressionable age has acquired racial and religious prejudices through a misdirected teaching of history or a distorted emphasis on the superior character of a particularly national tradition. Tolerance may be developed as a mental attitude. Charity may come from a quickened sense of social responsibility or may be grounded in spiritual sensibilities. Our schools and universities have a unique opportunity to cultivate a mental attitude of tolerance and remove the seeds of

prejudice which are planted in the soil of ignorance. This is also one of the tasks confronting two other educational institutions to which I wish to pay tribute for their contribution to good citizenship—the Frontier College and the Workers Educational Association. Certainly the survival of prejudice and intolerance must ever mark the failure of education to achieve its higher purposes as a training for the performance of civic duties.

Before I conclude, perhaps I may be allowed to say a word regarding the effect of intolerance on problems with which the Department of Labour is particularly concerned. In dealing with labour questions the basic need is, after all, the right attitude on the part of the employers and employed, a willingness to see each phase of the problem from the other's point of view while recognizing that on the cordial agreement of the two parties to the employment relation depends not only the success of particular industries but the welfare of the persons engaged in them, their dependants and the ever-widening circle of people affected by them. With the creation of this attitude of mind, and with proper knowledge of the conditions, almost any problem becomes easy of solution. When both parties are prepared to play the game, to be fair to each other and to their fellows, to observe the law in letter and in spirit, experience has shown that the utmost difficulties may be overcome.

But employers and workers are not classes by themselves, unaffected by other persons or other groups. They form part of the community at large. They derive their ideas and standards just as other people do from their homes, schools, churches, companions and the particular circumstances of their lives. The solution of labour problems, as of any other problem in our public and business life, is dependent in the end on the abilities of our citizens to think clearly and objectively, to recognize the value of knowledge and to seek it, to perceive the fundamental principles of right and wrong in public and business activities and to adhere as loyally to them as in private life, and, finally, the willingness to abide honourably by the rules of the game, whether they be laid down by individual conscience, in written agreements, or in the statute books. In the development of these qualities very much depends on our school systems and school teachers.

May I suggest in closing that for teachers everywhere there is a benediction and a call to duty in the familiar lines from "In Memoriam":

"Let knowledge grow from more to more,  
And more of reverence in us dwell,  
That mind and soul according well  
May make one music as before."

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Recent Orders Governing Minimum Wages

THE British Columbia Board of Industrial Relations—administering the Female Minimum Wage Act, the Male Minimum Wage Act, and the Hours of Work Act—has recently issued orders establishing a minimum wage for women employed in offices and for the occupation of taxi-cab driver.

#### Female Minimum Wage Act

ORDER No. 34.—*Establishing a minimum wage in the office occupation.*

This Order rescinds previous regulations issued in May, 1934 (LABOUR GAZETTE, June, 1934, page 531).

As defined in the Order, "office occupation" includes the work of females employed as stenographers; book-keepers; typists; billing clerks; filing clerks; cashiers; cash-girls (not included in any other Order of the Board); checkers; invoicers; comptometer operators; auditors; attendants in physicians' offices, dentists' offices, and other offices; and the work of females employed in all kinds of clerical work.

Subject to certain other provisions, the Board has fixed the minimum wage of experienced full time employees over eighteen years of age at \$15 for a week of 37½ hours or more; and for part time experienced employees working less than 37½ per week the rate is set at 40 cents per hour provided that no such employee in any one day shall be paid less than the equivalent of four hours work.

The minimum scale for full time employees under eighteen years of age for a working week of 37½ hours or more, is as follows: \$11 per week for the first six months; \$12 per week during the second six months; \$13 per week during the third six months; and \$14 a week thereafter until the employee reaches the age of eighteen.

For part-time employees under 18 years, and working less than 37½ hours a week, the rates are: 30 cents per hour during the first six months; 32½ cents per hour during the second six months; 35 cents per hour during the third six months; and 37½ cents per hour thereafter until the employee reaches the age of eighteen. No employee in any one day is to be paid less than the equivalent of four hours work.

For inexperienced full time employees, eighteen years and over, and working 37½ hours per week or more, the rates are: \$11 per week during the first three months; \$12 during the second three months; \$13 during the third three months; \$14 during the fourth three months; and \$15 per week thereafter.

For inexperienced part time employees, eighteen years and over, and working less than

37½ hours per week, the rates are: 30 cents per hour during the first three months; 32½ cents per hour during the second three months; 35 cents per hour during the third three months; 37½ cents per hour during the fourth three months; and not less than 40 cents per hour thereafter. For this class of employee the Order also stipulates that in any one day the remuneration shall not be less than the equivalent of four hours pay. Licences must be obtained from the Board before employing inexperienced workers eighteen years of age or over at the rates established for this group.

Permits are necessary before any employees are required to work more than eight hours in any one day or more than forty-eight hours in any one week.

This Order became effective on January 30, 1936.

#### Male Minimum Wage Act

ORDER No. 33.—*Establishing a Minimum Wage in the occupation of taxicab driver.*

This Order became effective January 24 and rescinds the Order of June 13, 1934 (LABOUR GAZETTE, July, 1934, page 642). The new Order is as follows:

1. That where used in this Order the expression "taxicab driver" means and includes every employee (being a male person twenty-one (21) years of age or over) and every male person under twenty-one (21) years of age in charge of or driving a motor-vehicle with seating accommodation for seven (7) passengers, or less than seven (7) passengers, used for the conveyance of the public and which is driven or operated for hire.

2. That the minimum wage for every taxicab driver shall be not less than the sum of two dollars and fifty cents (\$2.50) per day.

3. That every employer who requires a taxicab driver to wear a uniform or any special article of wearing apparel while in his employ shall furnish same without cost to the said taxicab driver.

4. That this Order shall apply to taxicab drivers and their employers in the City of Vancouver, the City of Victoria, the Municipality of the Township of Esquimalt, the Municipality of the District of Oak Bay, and the Municipality of the District of Saanich.

ORDER No. 13A.—*Logging Industry.*

Effective January 30, the Board has issued Order No. 13A, extending the provisions of Order No. 13 (LABOUR GAZETTE, October, 1934, page 914) to "apply to that portion of the basin of the Skeena river lying east of the mouth of and including the Khyex river."

ORDER No. 1C.—*Logging Industry.*

Effective January 30, the Board has issued Order No. 1C declaring that the provisions of Order No. 1 (LABOUR GAZETTE, May, 1934, page 419) "shall not apply to that portion of the basin of the Skeena river lying east of the mouth of and including the Khyex river."

## MINIMUM WAGES IN QUEBEC

### New Orders Governing Employment in Boot and Shoe Industry, Women's Dress Industry and Leather Industry

THE Minimum Wage Board of Quebec has recently issued three orders which supersede or amend previous orders respecting employment in: (1) all branches of the shoe industry; (2) women's dress industry; and (3) leather and simile-leather industry.

**ORDER No. 7.**—*Governing female employees and males when replacing females in any class of employment in all branches of the shoe industry in the province.*

This order, effective from February 22, 1936, supersedes Orders 7, 7a and 7b previously enacted on July 1, 1929, and October 1, 1933 (LABOUR GAZETTE, May, 1929, page 489, and September, 1933, page 916).

The chief effect of this Order is to establish the minimum rates on a percentage basis of numbers employed instead of (as formerly) on a time basis that varied with the length of the apprenticeship or experience period. A comparison with the former Orders governing the boot and shoe industry illustrates this change in rating. For instance, in the Order of October, 1933, a beginner's minimum rate for the Montreal area was \$7 per week, increasing to \$8 after six months' experience. By the new Order this method of rating is abolished and it is now provided that 20 per cent of the employees shall be paid at not less than \$7 per week; 15 per cent at not less than \$9 per week; and 65 per cent at not less than \$11 per week.

**Minimum Rates.**—The minimum rates for the province are as established for the following zones and schedules:

**Zone 1.**—Montreal and a radius of 10 miles round the island of Montreal.

20 per cent of the employees, at not less than.....	\$7.00
15 per cent of the employees, at not less than.....	9.00
65 per cent of the employees, at not less than.....	11.00

**Zone 2.**—City of Quebec and a radius of 10 miles around the City of Quebec.

20 per cent of the employees, at not less than.....	\$6.00
15 per cent of the employees, at not less than.....	8.00
65 per cent of the employees, at not less than.....	10.00

**Zone 3.**—Municipalities of 3,000 population and more and a radius of 5 miles around them. (Montreal and Quebec excepted).

20 per cent of the employees, at not less than.....	\$6.00
15 per cent of the employees, at not less than.....	7.50
65 per cent of the employees, at not less than.....	9.50

**Zone 4.**—Municipalities of less than 3,000 population.

20 per cent of the employees, at not less than.....	\$6.00
15 per cent of the employees, at not less than.....	7.00
65 per cent of the employees, at not less than.....	9.00

Other provisions pertaining to the above minimum rates are:

(a) The worker's salary shall be paid to her wholly in cash; no deduction being permitted for any cause or purpose whatsoever. This salary shall be given to her in a sealed envelope on which shall be written: her name, her register number, the date of the week or of the fortnight she has worked, the number of hours she has performed, the rate per hour, the amount of money included in the envelope; the same must be initialed by the person who paid the employee.

(b) All employees, whether working on time or piece, or on any other system of pay, are subject to the above specified minimum wages. The system of periodical changes from piece rates to hourly rates, or vice-versa for same operation is prohibited as such changes permit an illegal reduction of wages; the piece rates shall be uniform for all employees performing same operations.

(c) To establish percentages, the wages of each worker shall be computed on four (4) consecutive weeks.

**Deduction for absence:** No deduction below the minimum wage line for absence shall exceed the value of the time lost.

**Waiting time:** Any employee required to wait on the premises shall be paid for the time thus spent; not more than eight (8) punches allowed per day.

**Exemption:** The Board may grant permits of variation or suspension of any of these regulations to meet exceptional conditions.

**Discharge of employees:** No employer shall discharge or threaten to discharge or in any way discriminate against any employee because such employee has lodged a complaint with the Board or has testified or is about to testify in any investigation or proceedings permitted or prescribed by or taken under the provisions of this Act. All complaints are treated strictly confidential.

**Reference:** No employer shall refuse to give employees a letter of reference when they leave their employ, if request is made for same.

**Hours of Work:** The work period for which the above rates are fixed remains the same at 48 hours per week, with the same provisions as in the former order governing overtime, and short time, penalties and posting.

**ORDER No. 10.**—*Governing female employees and males when replacing females in the Women's and Misses' Dress Industry (excluding House Dresses).*

This order, which is effective from March 2, replaces the Orders previously enacted on July

1, 1930 and December 1, 1934 (LABOUR GAZETTE, May, 1930, page 523; and October, 1934, page 915).

The major change in the present Order is that the same schedule of rates is applicable to the entire province whereas in previous Orders there were separate rates for Montreal and the rest of the province. There is an increase in the percentages of employees in the lower wage classifications, while the working week on which the minimum rates are based is reduced from 48 hours (in Montreal) and 50 hours (rest of the province) to 44 hours throughout the province.

**Minimum Rates.**—The new minimum rates as set forth in the Order are:

15 per cent of the total female working force shall be paid not less than....	\$7.00
20 per cent of the total female working force shall be paid not less than....	\$10.00
65 per cent of the total female working force shall be paid not less than....	\$12.50

The clauses with respect to method of payment, deduction, waiting time, exemption, discharge of employees, reference, etc., are identical with those in Order No. 7 preceding.

**ORDER No. 6.**—*Governing female employees and males when replacing females in any class of employment in leather and simile-leather industry.*

At a joint conference held by the Minimum Wage Commisison in Montreal on June 18, 1931, it was decided that the Orders then resulting—No. 13 and 13A—should be applied only to the operation of the fur industry, exception being made for dyeing and hide-dressing plants, which would come under a separate

Order to be issued later. (Orders No. 13 and 13A were published in the LABOUR GAZETTE for July, 1931, on page 770). Accordingly, the present Order (No. 6) is applicable to employment in the preparing, dressing and dyeing, of hides, skins and leather; leather or simile-leather goods; articles for travellers, trunks, satchels, hand-bags and pocket-books of all description made of leather or any other material.

**Minimum Rates.**—The minimum rates are established as follows:

**Zone 1.**—Montreal and a radius of 10 miles around the island of Montreal.

20 per cent of the employees, at not less than .....	\$ 7 00
15 per cent of the employees, at not less than .....	9 00
65 per cent of the employees, at not less than .....	11 00

**Zone 2.**—Municipalities of 3,000 population and more and a radius of 5 miles around them (Montreal excepted).

20 per cent of the employees, at not less than .....	\$ 6 00
15 per cent of the employees, at not less than .....	8 00
65 per cent of the employees, at not less than .....	10 00

**Zone 3.**—Municipalities of less than 3,000 population.

20 per cent of the employees, at not less than .....	\$ 6 00
15 per cent of the employees, at not less than .....	7 00
65 per cent of the employees, at not less than .....	9 00

**Hours.**—The work period to which the above rates apply is for a week of 48 hours.

In all other respects the general provisions are identical with those pertaining to Order No. 7.

## Convention of Alberta Federation of Labour

**T**HE twentieth annual Convention of the Alberta Federation of Labour was held in Calgary, January 13-15, 1936, with approximately fifty delegates in attendance.

In the joint report of the president and secretary, reviewing the year's activities, reference was made to the affiliation of additional unions, the increase in membership and an improved financial standing. The action of the provincial Government on the representations submitted to it by the Federation was summarized.

In discussing the problem of unemployment and relief, the convention made its recommendations under two headings: (1) "Immediate Relief" and (2) "Permanent Economic Betterment and Abolition of Unemployment." Under the first, the recommendations included:

Establishing of an unemployment fund, derived from a tax on industry "to ensure the

continued payment for the necessities of life" to the unemployed.

That the "adequate necessities of life" in the form of food, clothing, shelter, medical attention and housing, conform to the provincial health laws.

Provision of medical examination, medical services, and hospitalization for the unemployed.

Town planning for the "modernization of cities" and the abolition of unsanitary buildings.

Institution of state health legislation.

Systematic construction of streets and roads with a view to the future development of transportation.

Reduction of the age limit for the receipt of old age pensions.

Under the second section dealing with unemployment, the major recommendation urged

the "immediate establishment of a federal economic council." (The Economic Council of Canada Act was enacted at the 1935 session of Parliament. Action has been taken at the present session to abolish this measure.)

Among other recommendations contained in the resolutions adopted were:

The compiling by the district office of the United Mine Workers of America of the salient sections of the Mines Act for distribution in tract form by the Provincial Government.

Establishment of a permanent mine rescue crew in the Drumheller Valley.

Institution of a six-hour day and five-day week policy for the miners and mine workers.

Establishment of a by-product plant in the Drumheller Valley.

Relief distribution to all unemployed persons.

Institution by the Provincial Government of a program of work at trade union rates of pay.

Amending the Relief Act to make provision for household equipment commensurate with proper household standards.

Abolition of all relief camps.

Inauguration of a federal provincial-municipal building program with fair wages.

Establishment of a minimum wage of \$12.00 a week for boys in stores and factories.

Improved regulation of motor vehicle trans-

portation under the Board of Railway Commissioners.

Restricting bus and truck drivers operating in the province to a maximum of eight hours per day and forty hours per week.

Establishment of a maximum 40-hour week for all workers.

Provision for elderly persons who, by reason of residential disqualification are not eligible for old age pension.

Institution of a national coal policy by the Federal Government.

Repeal of Section 98, of the Criminal Code.

Shortening the period for establishing a Conciliation Board under the Industrial Disputes Investigation Act.

Pensioning of industrial workers over fifty years of age.

Abolition of cadet training.

Opposition to war and fascism.

Opposition to the opening up of new coal mining fields "until such time as the mines now developed can give reasonable employment to their employees."

The officers elected were: President, F. J. White, Calgary; Secretary-Treasurer, Carl E. Berg, Edmonton.

Edmonton was chosen as the convention city for 1937.

### Orders of Manitoba Minimum Wage Board

The Manitoba Minimum Wage Board has recently issued an extension to one order and an addition to another as indicated below:—

*ORDER No. 5.—Governing employment in hotels, restaurants, etc.*

The Manitoba Gazette, of January 25, contained a notice of the Minimum Wage Board setting out an Order in Council (No. 72) authorizing the extension of Order No. 5 governing employment in hotels, restaurants, clubs, refreshment stands, etc., to apply "to all portions of the Province of Manitoba although not included within any city." The provisions of Order No. 5 were published in the LABOUR GAZETTE for November, 1935, page 1011.

*ORDER No. 2.—Governing employees in all departments of a departmental store and mail order house.*

This Order was issued originally in 1919 and has been revised from time to time. In the Manitoba Gazette of February 1, the Order was further amended by an addition of a subsection which provides that "no

employee shall be required to work on a statutory holiday unless a permit of exemption has been issued . . . or unless the nature of such employee's work necessitates his or her employment to provide proper care and maintenance of the property."

The effect of mechanical improvement on employment is illustrated by reports made to the Dominion Bureau of Statistics by the Bell Telephone Co. In recent years the use of the dial or automatic telephone has been extending though, it is understood, not so rapidly as has been possible, the company rather inclining to move somewhat slowly in the installation of the dial. The figures show that in 1929 there were 8,367 female traffic employees, whereas in 1933, only five years later, there were only 4,187, just half as many.

The number of telephones per switch board operator has in that time increased from 91 to 160.

The number of manual telephones per operator has increased from 64.2 to 77.5 and of automatic telephones per employee from 26.8 to 88.5.

## WAGES OF EMPLOYEES ON FARMS IN CANADA, 1929, AND 1933 TO 1935

THE Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these figures

have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the LABOUR GAZETTE for January, 1925 to 1936, inclusive, the first of these giving figures back to 1914. The accompanying table includes figures taken from the issue of the *Bulletin* for February, 1936, and from previous issues.

WAGES IN AGRICULTURE, 1929, 1933, 1934 AND 1935

## UNEMPLOYMENT AND RELIEF IN NEW ZEALAND

THE situation with respect to unemployment and relief in New Zealand is comprehensively reviewed in two publications—The New Zealand Year Book, 1936, and the report of the New Zealand Unemployment Board, 1935—recently received in the Department.

From the picture thus presented, it is interesting to note the methods of dealing with the problem in that country, which, on April 1, 1935, had a population of 1,630,433.

As pointed out in the Official Year Book, the problem of unemployment became acute in 1926, in spite of steps taken by the Government, local bodies and private organizations to provide work. In 1929 and 1930 matters reached a stage which led to the passing of the Unemployment Act, October 11, 1930 (LABOUR GAZETTE, January, 1931, page 25). The Act provides for the establishment in the Public Account of an Unemployment Fund, the constitution of an Unemployment Relief Board, and the raising of an unemployment levy.

According to the Official Year Book, the slackness in industry and trade already evident when the Unemployment Act came into force, became intensified in 1931, 1932 and the earlier portion of 1933. During 1931 the number of applicants on the registers totally unprovided for increased steadily, despite the fact that increasing numbers were being engaged under the various schemes of the Unemployment Board. In 1932 and 1933 the placements of men on relief work more than offset the number of new registrations, so that the number of men unprovided for fell considerably. On August 19, 1933, the number of unemployed registered was 57,352; on August 18, 1934, it was 50,532; and on August 17, 1935, the number registered as unemployed was 51,079.

These figures include men receiving relief under Scheme 5—the major relief plan in point of numbers engaged—under which men are employed part time on relief work by local bodies.

However, it would seem that the above totals are subject to some qualification, for the Unemployment Board in its 1935 report states that the number on full-time subsidized employment during the last twelve months has varied from 16,000 to 24,000. It is pointed out that it has been the practice to include these as unemployed because their earnings in whole or in part have been provided from the Unemployment Fund, but many of them under normal conditions would be employed by the Public Works Department, State Forest

Service, etc., from funds found wholly by General Government or from local body revenue or loan moneys. Excluding this class of subsidized full time workers from the total as shown on the unemployed registers, the Board considers that the "true figure" of the unemployed would be between 30,000 and 40,000. The Unemployment Board also draws attention to the fact that within the number registered as unemployed are "some thousands of men who under normal industrial conditions would be regarded as unemployable."

In future the Board proposes to present its returns showing the number of unemployed on a different basis.

*Unemployed Women and Girls.*—In order to safeguard the welfare of unemployed women and girls the Unemployment Board has maintained its policy of subsidizing the work of the local Women's Unemployment Committees. Reports received by the Board indicate that the problem of unemployed women and girls is practically non-existent except in the main centres, where it is chiefly confined to women of advanced years, inefficient and untrained workers and special problem cases.

*Unemployed Youths.*—According to the Board report placements of boys and youths during the year ended March 31, 1935, totalled approximately 5,900 of which some 3,000 were permanent and 2,900 of a temporary nature.

The Board considers that voluntary organizations in most of the larger centres have done excellent work in the placement of unemployed boys and youths in work either of a permanent or temporary nature.

"In the cities, boys have been absorbed in mercantile, industrial, and professional pursuits by the efforts of committees in placing them in touch with prospective employers. Many such positions have doubtless been 'made' and but for the interest displayed by the organizations referred to the employers concerned would probably not have provided vacancies. Through keeping in touch with schools and by various schemes of vocational training, committees have been enabled to select the right boys for different spheres of work."

While considerable difficulty was experienced in satisfactorily filling vacancies for youths on farms the general consensus of opinion, as expressed in reports received from all parts of the Dominion, indicated that the position of youth unemployment is becoming less acute. Certain districts still have their peculiar difficulties in regard to the placement of boys and youths in employment of a worth-while nature.

In general, however, the problem now seems confined to those who left school during the depth of the depression.

"Very little trouble seems to be experienced now in placing boys immediately they leave school, especially if they have received some secondary education. Unemployed youths from sixteen to twenty years of age may obtain employment on farms during the greater part of the year if willing to accept such work."

*Unemployment by Industries.*—Unemployment in New Zealand was particularly acute in construction and allied industries. The Unemployment Board in its report for 1935 estimated that between 50 and 60 per cent of unemployment was in the constructional industries. In noting various phases of the problem in New Zealand the Board makes the following observations:—

"Secondary industries represent 10 per cent (in workers unemployed) and are just ahead of commercial pursuits and the agricultural and pastoral industries, which represent approximately 8 per cent each.

"The comparative smallness of the proportions of unemployed for the transport industry (water 2.87 per cent and land 4.97 per cent) and the professional class (1 per cent) are particularly significant for the reason that they appear to indicate that the expansion which is taking place in the productive industries will gradually absorb these men.

"The fact that the unemployed who gave their occupations as being connected with the agricultural and pastoral industries numbered only 3,497 or 8 per cent of the total and were actually less than those engaged in secondary industries or in commercial pursuits is of

especial interest and demonstrates that expanding production in these industries has kept up the level of employment, notwithstanding the advances of science and machinery.

"The broad conclusion emerges from the figures that the bulk of the unemployed have come from the constructional industries and that the spearhead of any attack on the unemployment problem should be directed to the revival of these industries (which will spread to the distributive branches) or their replacement by expansion in either the primary or secondary industries. This is a far-reaching decision to make, but it must be made if the Dominion is to rid itself of unemployment."

*Camp Schemes.*—The Board report indicated that a considerable amount of valuable improvement and development work has been carried out by the placement of unemployed labour (both married and single men) in relief camps established by various State Departments and local bodies. The work consists of improvement of existing roads and main highways, land drainage, and development of Crown land generally, afforestation, and land-clearing and improvement work on private property in various parts of the Dominion. The principal State Departments under whose control relief camps have been established are the Public Works Department; Main Highways Board, Lands and Survey Department, and State Forest Service. The number of men engaged under camps schemes on July 6, 1935, was 2,317.

The cost to the State for the provision of unemployment relief measures in 1934-35 was £4,449,397 as compared with £4,674,283 in 1933-34.

### **Recommendations of Quebec Accident Prevention Association**

At a meeting held recently in Montreal, the Quebec Association for the prevention of Industrial Accidents adopted a number of resolutions for submission to the Quebec Workmen's Compensation Commission. With a view to tangibly recognizing employers who succeed in eliminating accidents from their plants, the Commission was urged to study the possibility of establishing a merit-rating policy; and also to make a survey of rates and consider favourably the readjustment of same in cases where an employer has shown a continuously good accident record.

In order to take care of possible "heavy indemnities" arising from the employment of handicapped workers (victims of previous accidents) the association adopted the following resolution:—

"The Quebec Workmen's Compensation Commission be urged to study the possibility of establishing at the earliest possible moment a fund which might be known as 'The Vocational Rehabilitation Fund,' this to serve as an equilibrium between the cost of compensation for partial permanent disability due to the loss of an eye, an arm or a leg and the cost of an award for total permanent disability due to the loss of the second eye, arm or leg, in order that similar additional injuries be compensated on the same basis as the first, the difference in the cost of total permanent disability to be drawn from the fund so established, thus the industrial class re-employing the already permanently partially incapacitated worker will be protected and the employers thereof would not be overburdened with the excessive additional cost of such total permanent disability award."

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF FEBRUARY, 1936

### Reports of Superintendents of the Employment Service

**E**MPLOYMENT conditions at the end of February, 1936, were reported by the Superintendents of the Employment Service to be as follows:—

Farming was quiet in the Maritime Provinces and fishing was only fair. Logging showed little change, with cutting still being done. Local mines in the New Glasgow area operated from four to six days per week, while those in Cape Breton and vicinity, except for one mine which reported a week's idleness, worked from two to four and a half days per week. Iron and steel groups were busy, also spool mills, sash and door factories, sugar refineries and confectionery plants. Little new building construction was reported, but that already under way was progressing favourably. A large number of men also found employment in snow removal. Transportation, particularly by rail, was heavy, due to the impossibility of highways for vehicular traffic. Freight shipments, also, were well up to the average. Trade was fair. A number of placements was also recorded in the women's division, although these consisted largely of charwomen.

The demand for farm help was light in Quebec Province, the majority of orders listed being from the Department of Colonization. Activity in logging gradually decreased as log cutting was completed. Other than at Rouyn and Three Rivers, where some men found positions at the mines, mining was quiet. Industrial conditions remained practically unchanged, but activity in various lines was noted by Chicoutimi, Montreal, Quebec City and Hull. Little building construction was in evidence. Many men, however, were employed in snow removal. Transportation and trade were quiet. There were numerous calls for domestics in the women's department and several hundred placements were made.

Orders for farm help in Ontario were fair, with wages somewhat higher this season than last. As some of the logging companies had completed their cut, few calls were received for bushmen, although camps at North Bay were still very busy. At Sudbury, a number of men who had been released from woods operations had found employment at saw-mills, which would mean additional work for several weeks. Mines in the vicinity of Port Arthur and Timmins were active, but, elsewhere, mining was quiet. Improvement in the general industrial situation continued and staffs were well maintained, except for tem-

porary reductions, resulting from seasonal slackness. Building construction was slow, due, in part, to the severe weather; however, prospects for spring work in this line appeared brighter. Relief projects continued to take care of their quota of workers and some additional help was taken on by the railways for road maintenance. Many casual jobs in snow removal were also provided in different localities throughout the province. There was the usual demand for women workers in household service, but difficulty was experienced in placing women in industrial and clerical positions.

Fewer calls were received for farm workers in the Prairie Provinces, although many enquiries were made concerning wages and suitable help for spring work. Indications were that the pay might be slightly higher than last year's. Placements under the Farm Labour Relief Plan were few and a number of orders of that kind remained unfilled, the cost of transportation being a big factor in the placement of farm help, as few men had sufficient funds to travel from one place to another. The demand for bushmen was fairly good and sufficient applicants were available, although lack of transportation again proved a hindrance in the filling of some of the vacancies. Mines, for the most part, were working to capacity. Manufacturing remained unchanged. Building construction, except at Winnipeg, showed little activity and in that city the problem of finding employment, outside of relief work, is likely to become somewhat more difficult, with the influx of men from the lumber camps. Some extra help has been engaged by the railways, owing to the extremely cold weather. Trade showed improvement. A slight increase was noted in various centres in the call for domestic help, while in others, little work was available for women in household service.

Farming was quiet in British Columbia and severe weather stopped practically all work in the orchards, although packing houses in Penticton still had a number of people employed. There was no pronounced movement of labour in the logging industry. Saw-mills were running again, as a great part of the ice had moved out of the rivers; sash and door factories, also, were busy with export trade. Mining was fair. Manufacturing remained unchanged, but weather conditions proved a hindrance to building construction and little was being done outside of work on

relief projects. Drydocks and shipyards were fairly active at Prince Rupert and shipping and longshoring were good at New Westminster, Vancouver and Victoria, but quiet at Prince Rupert. Trade, with the exception of

that of the fuel dealers, was quiet, due to the extreme weather. This condition also adversely affected the women's division, where fewer applicants were placed in household service.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1936

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 9,394, the employees on their payrolls numbering 927,006 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,779, having an aggregate membership of 167,717 persons, 14.8 per cent

of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of February, 1936, as Reported by Employers

Employment at February 1, 1936, showed a further contraction, according to data tabulated by the Dominion Bureau of Statistics from 9,394 firms whose payrolls aggregated 927,006 persons, compared with 933,294 in the preceding month. This reduction of nearly 6,300 workers since January 1 compared unfavourably with the average gain indicated at February 1 in preceding years of the record, which commences with 1921, so that the index, after correction for seasonal influences, showed a decrease of slightly over two points, from 106.1 at January 1 to 103.9 at the beginning of February. However, it continues higher than in any month of 1935, and is also higher than at any earlier date since the spring of 1931.

An analysis of the returns by industries shows that the most pronounced recovery at the date under review was that of a seasonal character in manufacturing, in which there was an increase of nearly 9,000 workers, or 1.8 per cent as compared with January 1, 1936; this improvement, like the year-end loss which it succeeds, was below the average indicated at the beginning of February in the fifteen preceding years for which data are available. Within the group of factory employment, the

iron and steel, textile, leather and lumber industries showed the largest gains. Among the non-manufacturing industries, metallic ore mining, transportation and railway construction and maintenance also recorded heightened activity; the increased employment in the last-named was chiefly caused by snow-clearing operations. Declines were indicated, on the whole, in the remaining groups; logging communications, building and highway construction and services reported moderate reductions in personnel, while there were very large, seasonal losses in retail trade, in reaction from the intense activity of the holiday season. The contraction in retail establishments at February 1, like the gains which had been made in the preceding month, substantially exceeded the average for February 1 in the years since 1920. A fuller analysis of the situation in the various industries appears below.

A brief review of the situation as at February 1, 1935, shows that the 8,992 firms from whom statistics had been received had reported an aggregate payroll of 885,556, an increase of rather better than 2,000 as compared with the preceding month. The index

then, however, was 3.8 points lower than at February 1, 1936, when it stood at 98.4.

The crude index of employment (average 1926=100) declined from 99.1 at January 1, 1936, to 98.4 at the beginning of February, as already stated, while at February 1 in other years for which data are available, the unadjusted index was as follows: 1935, 94.6; 1934, 91.4; 1933, 77.0; 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9 and 1921, 91.2.

employment being between one and two per cent. On February 1 of the present year, however, activity showed a decline that exceeded the average, 4,135 persons having been laid off since January 1 by the reporting firms, whose payrolls aggregated 73,057 workers; this was a reduction of over five per cent in the month. Logging, communications, retail trade and highway construction reported curtailment, that in the last-named being on a large scale; on the other hand, improvement took place in transportation, manufacturing and

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

### Employment by Economic Areas

Improvement was recorded in British Columbia, while the movement was unfavourable in the Maritime Provinces, Quebec, Ontario and the Prairie Provinces. The reduction in the Maritimes was considerable. Employment was more active than at the beginning of February of last year in each of the economic areas, being also generally at a higher level than at February 1, 1934, 1933 or 1932.

**Maritime Provinces.**—The trend of employment in the Maritime Provinces has very frequently been downward at the beginning of February in the fifteen preceding years for which data are available, the average loss in

railway construction and maintenance. Within the manufacturing group, pulp and paper and electric current plants showed reduced activity, but iron and steel works reported largely increased staffs, and there were smaller gains in animal food and some other factories. An advance that was contrary to the usual seasonal movement had been recorded at February 1 of last year, when 623 firms had reported 71,236 employees, or 758 more than at January 1, 1935. The index then, however, was lower than at the date under review, standing at 100.1 as compared with 102.2 at February 1, 1936.

**Quebec.**—Employment in Quebec showed a contra-seasonal decrease at the date under review, when the working forces of the 2,225

co-operating employers aggregated 263,046, as against 263,960 at January 1, 1936. There were large gains, on the whole, in manufacturing, notably in leather, textile and iron and steel plants, while musical instrument, vegetable food, pulp and paper, tobacco and beverage, clay, glass and stone and electrical apparatus factories were slacker. Transportation and construction also showed improvement. On the other hand, important curtailment was indicated in services, trade and logging, reducing employment on the whole in the province. The index at February 1, 1936, stood at 95.2, as compared with that of 89.5 at the same date last year, when a considerable decline had occurred; the 2,142 firms making returns for the beginning of February, 1935, had reported a staff of 245,493 persons, or 4,976 fewer than in the preceding month. In the experience of other years since 1920, employment in Quebec has usually advanced at February 1, improvement having been noted in eleven of the fifteen years.

*Ontario.*—A moderate decline on the whole was shown in Ontario, where decided recovery in manufacturing, particularly in iron and steel, textile, leather and vegetable food factories was more than offset by reductions

of a seasonal character in retail trade. Data were received from 4,162 firms employing 392,758 persons at the date under review, as compared with 393,745 at the beginning of January. This decrease of 987 workers compared unfavourably with the gain that has been shown, on the average, between January 1 and February 1 in the years 1921-1935. The movement had been upward at the beginning of February last year, when the 3,970 reporting employers had shown an aggregate staff of 382,033. The index stood at 102.4 at the latest date, as compared with 100.2 at the beginning of February last winter.

*Prairie Provinces.*—Employment in the Prairie Provinces has, with few exceptions, declined at February 1 in the fifteen preceding years for which records are available. The tendency was also unfavourable at the date under review, when the 1,374 co-operating employers reduced their staffs by 1,604 persons, to 118,550 at February 1. Manufacturing showed little general change, improvement in lumber and iron and steel plants being offset by losses in vegetable food and mineral product works. Logging and railway construction afforded more employment, but coal-mining, communications, highway construction

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS.

(AVERAGE CALENDAR YEAR 1926=100).

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Jan. 1, 1936.....	99.1	108.1	95.5	102.7	95.1	92.4
Feb. 1.....	98.4	102.2	95.2	102.4	93.7	94.1
Relative Weight of Employment by Economic Areas as at Feb. 1, 1936.....	100.0	77.8	28.4	42.5	12.8	8.5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

and maintenance and retail trade showed curtailment, that in the last-named being on a large scale. The general contraction in industrial activity at February 1, 1936, was smaller than the average indicated at that date in the years since 1920, being also considerably less than the decrease noted at the beginning of February in 1935; the 1,329 employers then furnishing returns had reduced their staffs to 112,234 from 114,988 at January 1, 1935. The index stood at 93.7 at the date under review, compared with 89.2 at February 1 of last year.

*British Columbia.*—There was an increase in employment at February 1; this took place mainly in logging, construction and manufacturing (notably in lumber mills), while transportation, trade, metallic ore mining and some other industries were slacker. The additions to staffs considerably exceeded the average increase indicated in the last fifteen years. The working forces of the 980 reporting firms aggregated 79,595, a gain of 1,352 employees as compared with their payrolls in the preceding month. Less pronounced improvement had been noted between January 1 and February 1 in 1935, when the forces of the 923 co-operating establishments had been enlarged by 654 persons to 74,510 at the

latter date. The index, at 89.6, was then several points lower than at February 1 of the present year, when it was 94.1.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

The trend of employment was downward in Quebec City, Toronto, Ottawa and Winnipeg, while in Montreal, Hamilton, Windsor and Vancouver the tendency was favourable. Employment in each of these centres was at a higher level than at February 1 in 1935, 1934 or 1933.

*Montreal.*—Manufactures showed considerable recovery on the whole, notably in the footwear, textile and iron and steel groups, while tobacco and beverage, food, clay, glass and stone, musical instrument and electrical appliance factories reported reduced activity. Transportation and road construction and maintenance also afforded more employment, but building construction and trade were slacker, the losses being seasonal in character. Data were received from 1,298 firms employing 131,723 workers, or 1,709 more than at January 1. Industrial activity in Montreal has usually advanced between January 1 and February 1 in the experience of the years since

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES,  
(AVERAGE CALENDAR YEAR 1926=100).

Feb. 1.....	87.6	92.0	96.4	99.5	96.8	120.0	91.2	97.8
Relative Weight of Employment by Ci- ties as at Feb. 1, 1936	14.2	1.3	12.7	1.4	3.3	1.8	5.3	3.4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

1923, when statistics for that city were first segregated, but the improvement recorded in the present report exceeds the average gain at February 1 in the years 1923-1935. The index at the latest date stood at 87.6, or six points higher than at the beginning of February in 1935.

*Quebec.*—Returns tabulated from 165 employers in Quebec City showed that they had reduced their staffs from 12,404 at January 1 to 12,191 persons at February 1, the index falling from 93.5 at the former to 92.0 at the date under review. Manufacturing afforded more employment, mainly in leather using plants, and transportation was also busier. Trade, services and construction, on the other hand, were seasonally dull. The index was two points higher than at the corresponding date of last year, when a general gain had been noted.

*Toronto.*—Heavy seasonal losses took place in retail trade, while manufacturing showed improvement, mainly in vegetable food, pulp and paper, textile and iron and steel works. On the whole, there was a decrease of 5,075 in the number employed by the 1,415 co-operating firms, who had 117,547 employees. This

decline was decidedly larger than that indicated at February 1 of a year ago, but the index of employment then was lower by over three points than at the date under review, when it stood at 96.4. The 1,326 employers from whom statistics were received at February 1, 1935, had an aggregate payroll of 112,589.

*Ottawa.*—There was seasonal curtailment in retail trade and construction, but manufacturing was more active, the iron and steel group in particular showing heightened activity. However, the movement in the city was generally downward; 175 employers in Ottawa reported 12,888 workers, or 466 fewer than at January 1. Employment was in rather greater volume than at the beginning of February, 1935, when a moderate gain, on the whole, had been noted.

*Hamilton.*—Employment in Hamilton showed an advance, mainly in the manufacturing group, in which improvement was shown by iron and steel and other plants. There were, however, losses of a seasonal character in trade. Statistics were tabulated from 274 firms employing 30,978 persons, compared with 30,690 in the preceding month. The index, at 96.8, was over twelve points higher than at February 1 of a year ago, despite

Relative Weight of Em- ployment by Industries as at Feb. 1, 1936.....	100.0	53.5	5.3	6.4	2.2	10.1	9.4	2.7	10.4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

the fact that a more marked gain had then occurred.

*Windsor.*—Considerable recovery was indicated in automobile factories, while trade was seasonally slacker and other industries showed little general change. The 172 co-operating firms employed 16,245 workers, as against 15,789 at January 1. The situation was decidedly better than at the same date in 1935, when advances on a larger scale had been made. The index at February 1, 1935, had stood at 109.1, compared with 120.0 at the beginning of February in the present year.

*Winnipeg.*—The number employed in Winnipeg showed a contraction, mainly in communications and retail trade, while iron and steel factories, transportation and construction reported improvement. Returns were compiled from 459 firms with 39,033 employees, compared with 39,315 in the preceding month. Employment was decidedly brisker than at February

1 of last year, when pronounced curtailment had been indicated by 439 establishments employing 35,213 persons, as compared with 36,504 at the beginning of January, 1935.

*Vancouver.*—Manufacturing on the whole reported moderately increased employment, particularly in the lumber, vegetable food and non-ferrous metal groups, while animal food factories were slacker; construction and some other industries also released employees. The 424 reporting firms employed 31,320 persons, as against 31,186 at January 1. The index at 97.8 was nearly ten points higher than at the same date in 1935, when 390 employers had reported 27,767 employees, a decline of 181 from their payrolls in the preceding month.

Index numbers of employment by cities are given in Table 2.

### Employment by Manufacturing Industries

Improvement was noted in factory employment at February 1, 1936, when 5,568 co-oper-

<sup>1</sup>The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

ating manufacturers reported 496,150 operatives, compared with 487,172 in the preceding month. This increase of nearly 9,000 persons raised the index from 96.8 at January 1, to 98.5 at the beginning of February. The advance, however, was smaller than the average indicated in the years since 1920. The seasonally-corrected index was 102.3 at February 1, 1936, compared with 104.9 in the preceding month.

The 5,319 manufacturers furnishing data for February 1 of last year had reported 451,195 employees, as compared with 437,446 at the opening of 1935. The recovery then indicated had thus been on a larger scale than at the latest date, but the index at February 1, 1936, was 8.4 points, or 9.3 per cent, higher than at the beginning of February, 1935.

The February 1, 1936, crude index of employment in manufacturing stood at 98.5, compared with 96.8 in the preceding month, while at the beginning of February in the last fifteen years it was as follows:—1935, 90.1; 1934, 84.2; 1933, 75.0; 1932, 85.9; 1931, 96.1; 1930, 110.2; 1929, 112.8; 1928, 102.3; 1927, 98.2; 1926, 93.0; 1925, 85.8; 1924, 91.9; 1923, 92.0; 1922, 79.0 and 1921, 91.8.

The most pronounced improvement at the date under review over January 1, 1936, occurred in iron and steel plants, in which 6,460 additional employees were reported by the firms furnishing data; while this gain was smaller than the average increase between January 1 and February 1 in the years since 1920, it succeeded year-end losses that were also decidedly less than average. Activity in this important group of industries was greater at February 1 than in any month of 1935, or indeed, than at any period since the spring of 1931. There were also important gains in leather, lumber and textile factories, with smaller additions to staffs in the rubber, chemical and non-ferrous metal industries. On the other hand, food, fur, musical instrument, pulp and paper, tobacco and beverage, clay, glass and stone, electrical apparatus and mineral product plants showed curtailment.

*Animal Products, Edible.*—There was a decrease in employment in this group at the beginning of February, which, however, was smaller than that noted at the corresponding date last year, when the index at 102.9, was between five and six points lower. Statements were tabulated from 272 firms employing 20,828 workers, as compared with 21,097 in the preceding month. Dairies, meat and fish-preserving plants reported losses.

*Leather and Products.*—Employment in boot and shoe factories very substantially increased, while other branches of the leather industry

experienced only slight general changes. A combined working force of 21,343 persons was reported by the 288 co-operating manufacturers, who had 19,617 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was decidedly greater than at February 1 of a year ago, the index at the latest date standing at 104.5, compared with 98.7 at the same date in 1935.

*Lumber and Products.*—Considerable expansion was indicated in sawmills, while other lumber-using factories showed little general change; 1,451 workers were taken on by the 801 firms making returns, who had 34,656 on their staffs. This increase was much larger than that registered at the beginning of February, 1935, when the index of employment was lower by between seven and eight points. The gains in Ontario and British Columbia were most extensive.

*Musical Instruments.*—Thirty-five manufacturers of musical instruments (not including radios) reported largely reduced employment at February 1 as compared with the preceding month; their staffs numbered 1,196 persons, as compared with 1,472 at January 1. The index stood at 41.9, as against 31.1 at the same date of last year, when an advance had been indicated.

*Plant Products, Edible.*—There was a further decline in the vegetable food group, according to the 442 reporting establishments, which employed 27,814 workers, compared with 28,161 in the preceding month. Sugar and syrup and canning plants showed losses, which were partly offset by additions to staffs in the biscuit and bakery division. A gain had been made at February 1 of last year, when the index stood at 94.0, as compared with 96.4 at the date under review.

*Pulp and Paper.*—Pulp and paper mills were slacker, while paper product factories reported moderate gains. The general index at 96.2 was nearly four points higher than at February 1, 1935, when slight additions to staffs had been recorded. Data were received from 591 employers of 58,332 workers, as against 58,599 at the beginning of January, 1936; improvement in Ontario was more than offset by declines in the Maritime Provinces and Quebec.

*Rubber Products.*—The trend of employment in rubber factories was upward, 52 of these enlarging their payrolls from 11,721 persons at January 1 to 11,981 at February 1. The index, at 94.0, was over three points higher than at the same date in 1935, when a rather smaller gain had been indicated.

*Textile Products*.—The advance in employment in the co-operating factories was not so pronounced as that noted at February 1, 1935, but activity was then at a lower level than at the date under review. Woollen, headwear, garment and personal furnishing establishments registered important increases in personnel, while cotton, silk and knitting factories were slacker; the working force of the 988 co-operating firms aggregated 98,864 persons at February 1, 1936, as compared with 97,031 in their last report. Ontario and Quebec showed marked improvement.

*Tobacco, Distilled and Malt Liquors*.—There was a reduction in employment in this division, occurring mainly in beverage works. Returns for the beginning of February were tabulated from 170 manufacturers with 17,721 employees, or 484 fewer than in their last report. Employment was brisker than at February 1 of a year ago, when a rather larger number of workers had been laid off.

*Chemicals and Allied Products*.—Statements were compiled from 199 firms in this group, whose staffs aggregated 11,007, as compared with 10,782 at the beginning of January. Employment was more active than last winter, a shrinkage had been noted at February 1, 1935, as compared with the preceding month.

*Clay, Glass and Stone Products*.—A downward movement was recorded in this group at the date under review, according to 193 manufacturers, whose labour forces included 7,143 workers, or 281 fewer than in the preceding month. Employment generally was brisker than at February 1, 1935; curtailment had then also been indicated.

*Electric Current*.—A slight falling-off was noted in electric current plants at the beginning of February; the 99 co-operating manufacturers reported 13,979 employees, compared with 14,072 at January 1. Activity was greater than at February 1 of last year, when a more marked decline had taken place.

*Electrical Appliances*.—Employment in electrical appliance works showed a reduction from January 1, but the index was over ten points higher than at February 1 of a year ago; little general change had then been indicated. Data were received from 116 establishments employing 12,716 operatives, as against 13,254 at January 1, 1936.

*Iron and Steel Products*.—There were important increases in employment in iron and steel factories, but the gains were smaller than the average indicated at February 1 in the years since 1920. The recovery was most noteworthy in automobile and other vehicle

and crude, rolled and forged works, while the agricultural implement, machinery, boiler, engine and tank, heating appliance, steel ship-building, wire and some other groups were also busier. The improvement in Ontario was most pronounced, but the trend was generally upward. Statistics were tabulated from 853 firms, whose staffs stood at 118,411, compared with 111,951 at January 1. The index, at 89·8, was nearly twelve points higher than at the corresponding date of last year, when rather larger advances had been indicated.

*Non-ferrous Metal Products*.—Lead, tin, zinc, copper and other works in this division recorded heightened activity. The gain in the group as a whole was not so large as that noted at February 1, 1935, when the index, at 111·5, was many points lower than at the date under review (viz., 123·2). The working force of the 159 co-operating manufacturers included 19,459 employees, or 193 more than at the beginning of January, 1936. The increase took place largely in Ontario.

*Mineral Products*.—One hundred and thirty-eight establishments in the mineral products group reported 13,233 workers, as compared with 13,672 in the preceding month. Employment in this division as a whole was better than at mid-winter in 1935, when a larger decline had been indicated.

### Logging

Curtailment was recorded in logging, in which employment was at a lower level than at February 1, 1935. Statements were received from 314 operators employing 48,687 workers, as against 51,500 at January 1. The trend of employment was downward in all but the Western Provinces.

### Mining

Metallic ore mining showed heightened activity, while the extraction of coal and other non-metallics afforded less employment. On the whole, there was a decrease of 171 persons in the forces of the operators furnishing returns, who numbered 334. Their staffs aggregated 59,376 employees, of whom 25,598 were engaged in the mining of coal, 27,371 in metallic ores and 6,407 in non-metallic minerals, other than coal. A gain had been indicated in the group as a whole at February 1, 1935, when the index was nine points lower than at the date under review.

### Communications

The working force of the companies and branches reporting stood at 20,453 persons, compared with 20,990 in the preceding month, most of the reduction taking place on tele-

phones. The number employed was rather less than at the same date in 1935, when smaller declines had been recorded.

### Transportation

*Street Railways and Cartage.*—There was an upward trend in employment in this division at February 1, which compares favourably with the loss noted at the same date in 1935; the index then was over five points lower. The 215 co-operating employers had 25,251 persons on their payrolls, or 319 more than in the preceding month. Most of the increase occurred in Quebec.

*Steam Railway.*—A slight reduction was noted at the beginning of February, when 142 persons were released from the operating staffs of the steam railways, mainly in the Western Provinces. Returns were compiled from 100 companies and branches in this group, whose working forces aggregated 56,936 employees, as compared with 57,078 at January 1. A gain had been indicated at February 1 of last year, when the index stood at 70.1, as compared with 71.6 at the date under review.

*Shipping and Stevedoring.*—Employment in water transportation showed a small advance; 107 employers added 123 workers to their payrolls; bringing them to 11,582 at February 1 of the present year. The index was fractionally higher than at the same date in 1935; a minor loss had then been recorded.

### Construction and Maintenance

*Building.*—Employment in building construction declined at February 1; the index, at 53.6, was over ten points higher than at the beginning of February a year ago, when a similar reduction had been reported. Statistics were received from 677 contractors, with 21,712 persons in their employ at the date under review, as against 22,698 at January 1, 1936. The tendency was unfavourable in all provinces except British Columbia.

*Highway.*—The number of persons reported by 319 employers in the highway construction and maintenance group was 40,291, or 3,899 fewer than in the preceding month. Activity advanced in Quebec and British Columbia,

while there were decreases in the remaining economic areas. Employment in this division was less than at February 1, 1935; a smaller contraction had then been indicated.

*Railway.*—Considerable additions to staffs were noted in railway construction and maintenance, due to track-clearance operations. Smaller gains had been recorded at the same date in 1935, when the index was fractionally lower. Statements were tabulated from 32 employers in this group, with 25,284 persons on their payrolls, as compared with 20,896 in the last report. Increases in personnel were registered in all provinces except British Columbia.

### Services

Employment in services was not so active as in the preceding month; 452 establishments had 25,098 employees, or 364 fewer than at January 1, 1936. The index, at 116.4, was between four and five points higher than at February 1 of last year, when larger declines had been noted in this group.

### Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a substantial falling-off in the number employed in trade at February 1. The losses, like the gains in the preceding month, were on a scale larger than the average noted in previous years. The index of employment stood at 121.6 at February 1, 1936, compared with 116.6 at the same date of last year. The 1,191 trading establishments furnishing data reduced their payrolls from 107,370 employees at January 1, 1936, to 96,186 at the beginning of February. There were marked decreases in retail stores, while wholesale establishments showed a slight decline.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns at February 1, 1936.

## (2) Unemployment in Trade Unions at the Close of January, 1936

The term unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work other than their own trades or who are idle because of illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from

month to month with consequent change in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was little variation in the level of activity among local trade unions at the end of January from the previous month, though the tendency was in an unfavourable direc-

tion, the percentage of unemployment standing at 14.8 as contrasted with 14.6 per cent at the close of December, 1935. This percentage for January was based on the reports furnished by 1,779 labour organizations with a membership aggregate of 167,717 persons, 24,830 of whom were out of work on the last day of the month. Employment was, however, in greater volume than in January, 1935, when 18.1 per cent of inactivity was reported. Improvement, on a small scale, from December was reflected by Nova Scotia, New Brunswick and Quebec unions. Of the recessions evident in the

creases in employment of lesser proportions, and in New Brunswick the trend though favourable showed slight change from January a year ago. Some falling off in available work was evident, however, among Alberta, Saskatchewan and Nova Scotia unions.

Each month the records of unemployment among local trade unions in the largest city in each province with the exception of Prince Edward Island are tabulated separately. Of these, Regina unions reported a 5 per cent drop in activity from December, Edmonton and Vancouver unions showing curtailment of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

remaining provinces that of nearly 4 per cent in Alberta was the most noteworthy, the coal mines particularly, showing some slackening off in employment. In Saskatchewan the decline noted was around 2 per cent, while fractional curtailment only was reported by Ontario, Manitoba and British Columbia unions. Contrasted with the returns for January, 1935, Ontario and British Columbia members were considerably better engaged during the month surveyed, building operations in the former province showing increased activity on a pronounced scale, though the lumbering and logging industry also participated to a noteworthy degree in the total advancement, while in the latter province the gains were more generally distributed throughout the various trades and industries. Quebec and Manitoba unions recorded in-

lesser degree, while in Toronto the situation remained substantially the same with a slight tendency toward retarded employment. Halifax conditions improved by over 2 per cent from December, and in Montreal and Saint John also, the trend was favourable. From Winnipeg the same percentage of idleness was reported in both months under comparison. Substantial employment recovery from January a year ago was apparent among Toronto and Vancouver unions. In Montreal, gains on a more moderate scale occurred, while Halifax, Winnipeg, Regina and Edmonton showed improvement of smaller proportions. Saint John unions alone indicated some slackening in work afforded, which was slight.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1930, to date. The

curve during January varied very slightly in level from the previous month, though the tendency was upward in an unfavourable direction. At the close of the month the curve rested at a point below that of January, 1935, showing that employment was in greater abundance during the month reviewed.

In the manufacturing industries during January fluctuating conditions in the various groups from December were of a largely offsetting nature, resulting in but a fractional

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Mar., 1935.....	6.6	8.2	20.2	17.7	14.4	12.0	15.7	20.8	16.7
April, 1935.....	5.5	13.1	20.7	16.6	14.5	9.8	20.8	19.7	17.0
May, 1935.....	5.9	8.4	22.2	12.9	14.1	10.2	21.8	17.2	15.9
June, 1935.....	12.2	8.1	21.9	12.0	13.7	9.4	20.1	13.2	15.4
July, 1935.....	8.1	7.8	19.0	14.3	11.6	7.5	23.2	12.6	15.1
Aug., 1935.....	8.3	8.1	18.3	13.3	10.7	7.9	18.4	13.1	14.2
Sept., 1935.....	6.0	8.7	20.4	10.4	8.1	6.2	13.7	14.0	13.0
Oct., 1935.....	4.7	8.6	21.5	11.3	10.2	8.9	7.9	13.4	13.3
Nov., 1935.....	4.1	8.9	21.0	11.3	10.4	9.9	9.4	13.4	13.3
Dec., 1935.....	7.8	7.5	20.6	13.4	13.1	11.6	9.6	15.9	14.6
Jan., 1936.....	7.4	6.7	19.3	14.0	13.4	13.8	13.3	16.0	14.8

increase in unemployment at the close of the month. This was manifest by the reports received from a total of 486 labour organizations covering 53,777 members, 8,284 or 15.4 per cent of whom were idle at the close of the month, as contrasted with a percentage of 15.1 in December. Employment advancement, on a small scale, was evident from January, 1935, when 17.1 per cent of inactivity was recorded. Leather workers indicated decided betterment of conditions from December, and among iron and steel workers, general labourers, and bakers and confectioners the variation was slight though favourable. Wood, and textile and carpet workers, on the contrary, showed a pronounced drop in work available, and among cigarmakers and fur workers, the recessions noted were substantial. Among metal polishers and jewellery workers whose combined membership was small, and hence did not materially affect the percentage for the group as a whole, moderate curtailment was evident. Activity also declined slightly among brewery, garment, hat and cap, and glass workers, papermakers, and printing tradesmen. Contrasted with the returns for January, 1935, metal polishers, general labourers and cigarmakers were much better engaged during the month reviewed, and noteworthy employment expansion was evident among wood workers and papermakers. The iron and steel trades also absorbed a considerably greater number of members, while improvement of minor importance was reflected by garment workers. Slacker conditions, however, prevailed for leather and fur workers, and recessions in employment on a rather pronounced scale were apparent among jewellery, and textile and carpet workers, and bakers and confectioners. Losses in activity of lesser degree were recorded by glass, hat and cap, and brewery workers, and printing tradesmen.

The 51 unions of coal miners from which reports were received at the close of January, with 13,177 members, showed that 1,172 or 8.9 per cent were unemployed, contrasted with percentages of 6.3 in December and 6.9 in January, 1935. Dullness in the Alberta coal mines was almost entirely responsible for the downward employment movement noted from December. In Nova Scotia also, the trend was less favourable, though the variation from December was quite small, being less than one per cent. British Columbia miners, however, reported some slight improvement in conditions from December. As in the previous comparison the slackness reported from Alberta was the

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile workers	Textile and carpet workers	Garment workers	Hat, cap and glove makers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous industries	Building and construction	Transportation	Shipping and steam railway stevedoring	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

chief factor in the adverse situation noted in the mining industry, as a whole, from January, 1935, though activity in Nova Scotia and British Columbia also subsided slightly. Short time work was, however, rather prevalent during the month reviewed.

The building and construction trades afforded some increase in employment during January over the preceding month as shown by the reports tabulated from 203 organizations with a total membership of 19,616 persons. Of these, 8,144 were out of work on the last day of the month, a percentage of 41.5 as compared with 45.1 per cent in December. The trend of activity was decidedly upward from January, 1935, when 61.6 per cent of the members reported were unemployed. Carpenters and joiners were much more actively engaged than in December, and plumbers and steamfitters also were afforded a considerably greater volume of work. Slight gains in employment occurred among tile layers, lathers and roofers, bridge and structural iron workers, and steam shovelmen. On the other hand, granite and stonecutters showed substantial increases in slackness from December, and among hod carriers and building labourers noteworthy recessions were apparent. Declines in activity, on a more moderate scale, were recorded by painters, decorators and paperhangers, and bricklayers, masons and plasterers, while fractional curtailment only was evident among electrical workers. Employment recovery of extensive proportions from January a year ago was reflected by carpenters and joiners, electrical workers, and tile layers, lathers and roofers. Pronounced expansion was also indicated by bricklayers, masons and plasterers and plumbers and steamfitters, while steam shovelmen, and bridge and structural iron workers showed moderate advancement. On the contrary, hod carriers and building labourers suffered large losses in work available, painters, decorators and paperhangers recording declines on a rather small scale, and granite and stonecutters curtailment of less than one per cent.

Reports were tabulated at the close of January from 780 associations in the transportation industries, covering a total membership of 56,070 persons, 5,157 of whom were idle, a percentage of 9.2 as contrasted with percentages of 8.7 in December, and 10.6 in January, 1935. In the steam railway division, which comprised nearly 79 per cent of the total group membership recorded, there was a slight tendency toward retarded activity from December. The situation for navigation workers, however, declined substantially, while teamsters and chauffeurs showed but a

slight drop in work available. Street and electric railway employees were afforded the same volume of work in both months compared. When contrasting with the returns for January, 1935, steam railway employees and navigation workers were somewhat better engaged during the month reviewed. Minor contractions in activity, however, were registered by teamsters and chauffeurs, and street and electric railway employees.

Unemployment for retail shop clerks remained at exactly the same level at the close of January as in the previous month, the 5 unions making returns with 1,723 members showing that 63 or 3.7 per cent were idle on the last day of the month, the same percentage as was recorded in January. A slightly upward employment trend was manifest from January, 1935, when 4.4 per cent of the members reported were out of work.

The situation for civic employees was more favourable during January than in the preceding month according to the reports compiled from 80 associations with 8,405 members. Of these, 176 or 2.1 per cent were unemployed at the close of the month compared with 3.2 per cent in December. Conditions, however, were not quite so active as in January, 1935, when the percentage of idleness stood at 1.6.

In the miscellaneous group of trades there was some slight falling off in employment during January from the previous month, though heightened activity, on a small scale, was manifest from January, 1935. This was apparent from the reports forwarded by 126 local unions embracing a membership of 5,284 persons, 607 or 11.5 per cent of whom were unemployed on the last day of the month in contrast with percentages of 10.4 in December and 15.6 in January, 1935. Stationary engineers and firemen, theatre and stage employees, and barbers suffered losses in available work from December which were not of particular importance in any one group of trades. Noteworthy gains in activity, however, were reflected by hotel and restaurant employees, and the situation for unclassified workers improved slightly. Hotel and restaurant employees, barbers, stationary engineers and firemen, and unclassified workers all participated in the favourable employment movement shown from January, 1935, the advancement noted among hotel and restaurant employees being the most substantial. Conditions for theatre and stage employees, however, were somewhat quieter than in January of last year.

Fishermen were considerably slacker during January than in the previous month, the 3

unions from which reports were received with 574 members showing an unemployment percentage of 49.3 as compared with 35.9 per cent in December. Extensive employment recovery was apparent from January, 1935, when 91.8 per cent of the members reported were out of work.

Activity for lumber workers and loggers during January was in greater volume than in either the previous month or January, 1935, the improvement in the latter comparison being quite substantial. For the month reviewed 5 associations of these workers made returns to the Department, combining a

membership of 638 persons, 11.6 per cent of whom were idle on the last day of the month compared with 15.1 per cent in December and a percentage of 47.6 in January a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed, each year, from 1919 to 1935 inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1933 inclusive, and for each month from January, 1934, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for January, 1936

The volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1936, as indicated by the average daily placements effected, showed a decline of about 2 per cent from the previous month, but a gain of nearly 3 per cent when a comparison was made with the records of January a year ago. Total placements, however, for January, 1936, were less than those of January, 1935, as there was one less working day in the month under review. All groups, except farming and transportation, showed losses under the first comparison, the greatest being in construction and maintenance, services, logging and trade, but the gain in farming was quite substantial and largely offset the total decline reported in those four divisions. In comparison with January, 1935, reduced placements were registered in construction and maintenance, manufacturing, trade, and mining, while gains were shown in farming, services, logging and transportation, but the pronounced increase in farming was more than counterbalanced by a heavy loss in construction and maintenance.

The accompanying chart shows the trend of employment since January, 1934, as represented by the ratios of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications dipped sharply during the first half of January, but during the latter half of the month followed a marked upward trend. However, at the close of the period they were still over five points below the levels registered at the end of January a year ago. The ratios of vacancies to each 100 applications was 45.3 and 50.1 during the first and second half of January, 1936, in comparison with ratios of 53.3 and

55.6 during the same periods of 1935. The ratios of placements to each 100 applications during the periods under review were 42.5 and 47.9, as compared with 50.6 and 53.4 during the corresponding month of 1935.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1936, was 1,171, as compared with 1,189 during the preceding month, and with 1,134 in January last year.

The average number of applications for employment received daily by the offices during the month under review was 2,467, as compared with 2,080 in December, and with 2,085 during January, 1935.

The average number of placements made daily by the offices of the Service during January, 1936, was 1,109, of which 720 were in regular employment, and 389 in work of one week's duration or less, as compared with a total daily average of 1,126 during the preceding month. Placements in January a year ago averaged 1,082 daily, consisting of 605 in regular and 477 in casual employment.

During the month of January, 1936, the offices of the Service referred 29,403 persons to vacancies and effected a total of 27,716 placements. Of these, the placements in regular employment were 18,004, of which 13,664 were of men and 4,340 of women, while placements in casual work totalled 9,712. The number of vacancies reported by employers was 21,110 for men and 8,160 for women, a total of 29,270, while applications for work numbered 61,665, of which 47,402 were from men and 14,263 from women. Reports for December, 1935, showed 29,713 positions available, 51,983 applications made, and 28,144 placements effected, while in January, 1935, there were recorded 29,467 vacancies, 54,190 applications for work, and 28,131 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1926, to date:—

Year	Placements		
	Regular	Casual	Totals
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769

1936 (1 Month).....	18,004	9,712	27,716

Most of the placements effected were in construction and maintenance and services, there being 600 in the former and 230 in the latter. Included in the services total were 182 household workers. During the month 236 men and 75 women were placed in regular employment.

NEW BRUNSWICK

There was a decline of over 10 per cent in the number of positions offered through employment offices in New Brunswick in January when compared with the preceding month and of over 8 per cent in comparison with the corresponding month of last year. Placements also were over 10 per cent less than in December and over 7 per cent below January, 1935. There was a decrease in placements in con-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

NOVA SCOTIA

During January, employment offices in Nova Scotia received orders for over 15 per cent more workers than in the preceding month, but over 8 per cent less than during the corresponding month of last year. There was a gain of nearly 6 per cent in placements when compared with December, but a loss of 11 per cent in comparison with January, 1935. Fewer placements in construction and maintenance and logging than during January of last year caused the decline under this comparison, as small gains in services and manufacturing were offset by declines in trade and farming.

struction and maintenance when compared with January of last year, which accounted for the decline under this comparison. This loss, however, was partly offset by a gain in services. The changes in all other groups were quite small. Placements under construction and maintenance numbered 187, and in services 500. Of the latter, 394 were of household workers. Placements in regular employment numbered 92 of men and 67 of women.

QUEBEC

The demand for workers, as indicated by orders received at employment offices in the Province of Quebec during January, was nearly

4 per cent higher than in the preceding month and nearly 29 per cent above the corresponding month of last year. Placements also were nearly 5 per cent in excess of December and nearly 35 per cent above January, 1935. Substantial placement gains over January of last year in construction and maintenance and logging were responsible for the increase under this comparison and more placements were also made in services and farming. The only decline of importance was in manufacturing, although fewer placements were also reported in trade. Industrial divisions in which most of the placements were effected during the month were manufacturing 177, logging 1,043, farming 61, construction and maintenance 1,019, trade 76, and services 1,981, of which 1,848 were of household workers. There were 1,951 men and 1,481 women placed in regular employment during the month.

#### ONTARIO

Orders received at employment offices in Ontario during January called for nearly 7 per cent less workers than in the preceding month and over 23 per cent less than during the corresponding month of last year. There was a decline also in placements of 7 per cent when compared with December and of nearly 25 per cent in comparison with January, 1935. With the exception of a moderate gain in farming and a small increase in transportation, fewer placements were reported in all industrial divisions than during January of last year. The adverse change was, however, mainly due to less workers being sent to relief projects, although fairly substantial losses were also reported in logging and manufacturing. Placements by industrial divisions included manufacturing 319, logging 564, farming 446, construction and maintenance 3,847, trade 248, and services 3,067, of which 2,065 were of household workers. There were 2,102 men and 1,313 women placed in regular employment during the month.

#### MANITOBA

There was a decline of 21 per cent in the number of positions offered through employment offices in Manitoba during January when compared with the preceding month, but a gain of nearly 10 per cent in comparison with the corresponding month of last year. Slightly lower percentages of change were reported in placements under both comparisons. Farm placements, for the greater part under the \$5 Farm Relief plan, were considerably higher than during January of last year, but this increase was partly offset by a decline in relief work provided under construction and main-

tenance. An increase in services also was offset by a reduction in bush placements. The changes in other groups were small. There was, however, a net gain for the province as a whole. Placements by industrial divisions included logging 97, farming 2,014, construction and maintenance 576, and services 704, of which 584 were of household workers. During the month 2,708 men and 471 women were placed in regular employment.

#### SASKATCHEWAN

Opportunities for employment, as indicated by orders received at employment offices in Saskatchewan during January, were nearly 17 per cent better than in the preceding month and over 62 per cent above the corresponding month of last year. Placements also were 20 per cent higher than in December and over 60 per cent above January, 1935. As in Manitoba, placements under the \$5 Farm Relief scheme were considerably higher than during January of last year and accounted for the gain under this comparison. This increase was, however, somewhat reduced by losses in all other industrial divisions, the most important being in construction and maintenance and services. Industrial divisions in which most of the placements were effected during the month were logging 50, farming 2,703, construction and maintenance 117, and services 632, of which 475 were of household workers. Placements in regular employment numbered 2,854 of men and 407 of women.

#### ALBERTA

During January, positions offered through employment offices in Alberta were nearly 7 per cent less than in the preceding month, but nearly 21 per cent higher than during the corresponding month of last year. There was a decline of over 6 per cent in placements when compared with December, but a gain of over 15 per cent in comparison with January, 1935. The most noteworthy gains in placements over January of last year were in construction and maintenance, farming and services, and were responsible for the increase under this comparison. The only decline of importance was in logging. Placements by industrial divisions included logging 267, farming 694, construction and maintenance 1,090, and services 435, of which 350 were of household workers. There were 1,930 men and 300 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Employment opportunities, as indicated by orders received at employment offices in British Columbia during January, were over 18

per cent better than in the preceding month, but over 14 per cent less favourable than during the corresponding month of last year.

Similar percentages of change were reported in placements under both comparisons. A substantial decline in relief placements, offset,

in part, by an increase in services, was responsible for the decrease in placements when compared with January, 1935. There were, also, fewer placements in all the groups, except farming, but all of these changes were small. Placements under construction and maintenance numbered 2,591 and in services 821. Of the latter, 391 were of household workers. During the month 1,791 men and 226 women were placed in regular employment.

#### Movement of Labour

During the month of January, 1936, the offices of the Employment Service of Canada made 18,004 placements in regular employment 9,746 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 529 were granted the Employment Service reduced transportation rate, 461 proceeding to points within the same province as the despatching office and 68 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to employment at a distance for which no workers are available locally.

Reduced rate certificates issued in Quebec during January were two in number, these granted at the Hull office to bushmen bound for the Pembroke zone. Ontario offices were instrumental in the transfer of 346 persons during January, 345 within the province and one outside. The latter was a farm hand shipped from Port Arthur to Winnipeg. Provincially, the Port Arthur office granted certificates to 214 bush workers, 52 highway construction workers, 13 mine workers, 3 fishermen, one hotel worker and one town domestic, destined to centres within its own zone, while to employment within their respective zones also, the Fort William office despatched 22 bush workers and 3 mine workers, the Sudbury office 7 bush workers and 3 mine workers, and the Timmins office one hotel cook. To the Timmins zone in addition, 21 pulpcutters and one carpenter

were sent from North Bay. Travelling from Pembroke 2 highway construction workers proceeded to Port Arthur and one clerk to Sault Ste. Marie. The labour movement in Manitoba during January originated at Winnipeg, from which centre 76 persons were transferred at the special rate, 11 within the province and 65 outside. Provincially all workers were conveyed to points in the Winnipeg zone, included among whom were 6 mine employees, 2 hotel waitresses, one sawmill worker, one bushman and one farm hand. Travelling to situations outside the province 62 bush workers, one farm hand, one farm housekeeper and one fisherman were bound for the Port Arthur zone. In Saskatchewan during January 34 workers took advantage of the Employment Service reduced transportation rate, these going to provincial employment. The Prince Albert office was responsible for the despatch of 12 bush workers and the Yorkton office of 13 bushmen within their own zones, while from Regina 8 teachers journeyed to employment within the territory covered by that office. The one remaining transfer was of a teacher shipped from Saskatoon to Moose Jaw. Alberta transfers at the reduced rate during January totalled 65, all of which were to centres within the province. For employment within its own zone the Edmonton office despatched 40 bushmen, 14 fishermen, 5 farm hands, 2 farm housekeepers, 2 sawmill workers and one maid, while from Calgary one hotel worker was shipped to Drumheller. Securing certificates at British Columbia centres during January 6 persons travelled to provincial employment. From Vancouver one mine engineer proceeded to Nelson and 2 mine workers and one hotel cook within the Vancouver zone. Destined to the Penticton zone were 2 tiemakers journeying from Nelson.

Of the 529 persons who benefited by the Employment Service reduced transportation rate during January 294 were conveyed by the Canadian National Railways, 212 by the Canadian Pacific Railway, 22 by the Temiskaming & Northern Ontario Railway and one by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada During January, 1936

There was a seasonal decline in the value of the building permits issued by 58 cities during January as compared with the preceding month, but the total was considerably higher than in January, 1935; the co-operating municipalities reported permits for buildings estimated to cost \$1,283,716, compared with \$2,401,856 in December, 1935, and \$882,878 in January of

last year. There was, therefore, a reduction of 46.6 per cent in the first comparison, but an increase of 45.4 per cent in the second and more significant comparison.

Some 50 cities furnished detailed statements, showing that they had granted some 95 permits for dwellings valued at over \$376,000, and about 380 permits for other buildings estimated

to cost approximately \$556,000; a permit was also taken out for an engineering project estimated to cost about \$1,600. In December, authority was granted for the erection of some 160 dwellings and 300 other buildings, estimated to cost approximately \$400,000 and \$800,000, respectively.

Prince Edward Island, Nova Scotia, New Brunswick and British Columbia reported increases in the value of the building authorized during January as compared with December, 1935, the gain of \$208,876 or 95.4 per cent in British Columbia being greatest. Of the declines elsewhere recorded, the most marked were those of \$644,284 or 69.4 per cent in Quebec, and \$683,395 or 59.9 per cent in Ontario.

As compared with January, 1935, Prince Edward Island, Nova Scotia, New Brunswick, Quebec and British Columbia showed increases; that of \$307,607 in British Columbia being largest. In the remaining provinces, the value of projected building as represented by the building permits taken out showed declines, of which that of \$101,741 or 18.2 per cent in Ontario was most pronounced.

In Vancouver, there was an increase in the value of the building permits granted over the preceding month, and also as compared with the same month of last year; in Montreal, there was a decline in the former, but an increase in the latter comparison, while Toronto and Winnipeg showed decreases in both comparisons. The following cities reported increases as compared with December and also as compared with January of last year—Charlottetown, Halifax, Moncton, Galt, Hamilton, Kingston, London, Oshawa, Port Arthur, Sarnia, Windsor, Brandon, Nanaimo,

Prince Rupert, North Vancouver and Victoria.

*Record for January in the years 1920-1936.*—The following table gives the value of the building authorized by 58 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given, (1926=100).

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building materials in January (1926 average=100)
	\$		
1936.....	1,283,716	27.2	82.2
1935.....	882,878	18.7	81.8
1934.....	707,812	15.0	82.1
1933.....	1,185,961	25.1	75.7
1932.....	2,761,929	58.5	79.4
1931.....	8,401,456	178.0	84.0
1930.....	7,217,397	152.9	97.4
1929.....	8,416,880	178.3	98.0
1928.....	7,716,587	163.5	96.2
1927.....	5,676,537	120.3	95.8
1926.....	4,719,534	100.0	102.3
1925.....	5,447,270	115.4	101.0
1924.....	4,460,579	94.5	112.4
1923.....	4,139,498	87.7	109.8
1922.....	3,326,537	70.5	109.4
1921.....	2,595,564	55.0	143.0
1920.....	4,017,024	85.1	134.5

The 1936 figure was higher by 45.4 per cent than in January, 1935, and was also higher than in 1934 and 1933, but with these exceptions was lower than in any other year since 1920. The wholesale costs of building materials in recent months have been practically the same as in 1935 and 1934; while they were higher than in 1933 and 1932, they were considerably lower than in any other period since 1920.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, February, 1936, summarized the employment situation as follows:—

Employment at January 20, 1936, showed a sharp decline as compared with December 16, 1935. A marked reduction in employment normally occurs in January in many industries, owing to a temporary slackening of activity after Christmas. The effects of this seasonal decline were greatly accentuated at January 20 by the severe weather conditions, which had for some days been adversely affecting outdoor employment, particularly in the building and public works contracting industries. In these two industries the numbers unemployed in Great Britain and Northern Ireland showed

an increase of 108,000 as compared with December 16 of which 65,000 were registered as only temporarily stopped.

The principal other industries in which employment declined were the distributive trades, metal goods manufacture, steel-melting, rolling, etc., general engineering, furniture making, printing, the cotton, wool and hosiery industries, tailoring, brick, tile, etc. making, stone quarrying, the transport trades, the food industries and hotel, boarding house, etc. service.

The estimated number of insured persons aged 16-64, in employment in Great Britain at January 20, 1936, was 10,349,000. This was 250,000 less than at December 16, 1935, but 282,000 more than at January 28, 1935.

Among workpeople, aged 16-64, insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at January 20, 1936 (including those temporarily stopped as well as those wholly unemployed), was 16·3, as compared with 14·2 at December 16, 1935, and with 17·6 at January 28, 1935.

At January 20, 1936, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,732,503 wholly unemployed, 345,117 temporarily stopped, and 82,102 normally in casual employment, making a total of 2,159,722. This was 291,157 more than a month before, but 165,651 less than a year before. Part of the increase over a month earlier was due to the registration of juveniles who reached school-leaving age at the end of the Christmas term. The total on January 20 included 1,699,943 men, 73,340 boys, 318,348 women, and 68,091 girls.

The persons on the Registers included 1,040,152 persons with claims for insurance benefit; 735,665 insured persons with applications for unemployment allowances; 238,290 insured persons (including 28,316 insured juveniles under 16 years of age) not in receipt of insurance benefit or unemployment allowances, and 145,615 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at January 20, 1936, was 2,229,961.

### United States

*Manufacturing industries.*—Factory employment decreased 1·8 per cent and weekly pay rolls declined 5·7 per cent. Decreases in factory employment and pay rolls are customary in January as many plants temporarily close down after the first of the year for inventory and repairs. During the preceding 16-year period for which figures are available, decreases in employment were shown between December and January in 12 instances and decreases in pay rolls in 14 instances. With but one exception (1934), the decreases in pay rolls have been much more pronounced than the declines in employment.

A comparison of the January, 1936, employment index (83·1) with the index of January, 1935 (78·8), shows a gain of 5·5 per cent in employment over the year interval, while a similar comparison of the January, 1936, payroll index (72·2) with the January, 1935, index (64·3) shows an increase of 12·3 per cent in weekly wages.

Twenty-eight of the 90 manufacturing industries surveyed showed gains in number of workers. The largest percentage gains were seasonal in character and were in the following industries; millinery (15·4 per cent), fertilizers (9·9

per cent), boots and shoes (3·9 per cent), and agricultural implements (3·9 per cent). Smaller seasonal gains were also reported in men's clothing (1·7 per cent) and women's clothing (0·5 per cent). Among the remaining industries reporting increased employment were: engines-turbines-tractors (3·0 per cent), ship-building (2·6 per cent), textile machinery and parts (2·3 per cent), and cash registers-adding machines-calculating machines (2·1 per cent). Slight gains in employment were shown in the blast furnaces-steel works-rolling mills and foundry and machine-shop industries. The gain of 0·8 per cent in employment in the machine tool industry continued the forward movement which has been reported consistently in the industry since November, 1934, the January, 1936, employment index (102·4) standing at the highest point reached since October, 1930. Additional orders for farm equipment were reflected in the gain of 3·9 per cent in employment in the agricultural implement industry between December and January. The January, 1936, employment index for this industry reached the highest point (133·9) recorded since April, 1930. While the January, 1936, level of employment in this industry is still 20 per cent below the peak of 1929, the current index shows an increase of 400 per cent over the low point of 1932.

The most pronounced decline in employment was a seasonal decrease of 74·1 per cent in the beet sugar industry. Other sharp seasonal declines in employment over the month interval were reported in cottonseed oil-cake-meal (18·8 per cent), marble-slate-granite (17·8 per cent), cement (15·5 per cent), confectionery (15·1 per cent), cigars and cigarettes (12·2 per cent), stoves (12·3 per cent), shirts and collars (11·0 per cent), brick-tile-terra cotta (8·5 per cent), jewelry (8·4 per cent), men's furnishings (8·1 per cent), canning and preserving (7·8 per cent), and radio and phonographs (7·7 per cent). Other industries of major importance in which decreases in number of workers were shown from December to January were furniture (4·2 per cent), electrical machinery (2·5 per cent), sawmills (1·9 per cent), silk and rayon goods (5·0 per cent), woollen and worsted goods (4·5 per cent), knit goods (3·6 per cent), leather (2·7 per cent), book and job printing (2·5 per cent), and newspapers (1·4 per cent).

Employment in the automobile industry showed a decline of less than one-tenth per cent, while sharp reductions were reported in pay rolls. In the 3 immediately preceding years, employment and pay rolls in this industry in January have registered pronounced gains over the preceding month. Due to the recent advancement of production schedules in

the automobile industry to an earlier period, the customary expansion in this industry in January was lacking. Consequently, the general declines in factory employment and pay rolls were not offset by the gains in this industry such as those which had occurred in the immediately preceding years.

Employment in the durable goods group declined 1.5 per cent over the month interval and the group of nondurable goods industries showed a decline of 2.0 per cent in number of workers. The January employment index of the durable goods group (74.6) indicates that for every 1,000 workers employed during the base period (1923-1925=100) there were 746 at work in January, 1936, while the January index of employment for nondurable goods industries (92.3) indicates that for each 1,000 workers employed in this group during the years 1923-1925 there were 923 employed in January, 1936.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In January, 1936, reports were received from 23,325 establishments employing 3,857,341 workers whose weekly earnings were \$81,998,921. The employment reports received from these establishments cover more than 55 per cent of the total wage earners in all manufacturing industries of the country and more than 65 per cent of the wage earners in the 90 industries included in the Bureau of Labour Statistics monthly survey.

*Non-manufacturing Industries.*—Employment gains from December, 1935, to January, 1936, were shown in 9 of the 16 non-manufacturing industries surveyed. The anthracite, bituminous-coal, and metal-mining industries each reported additional workers over the month interval and telephone and telegraph, and electric railroad and motor-bus operation companies also reported small gains in numbers of workers. Other industries reporting increased employment from December to January were year-round hotels, laundries, insurance, and brokerage. Seasonal declines in employment in January were reported in retail trade, wholesale trade, quarrying and nonmetallic mining, and private building construction. Decreases in employment were also reported in power and light, crude petroleum producing, and dyeing and cleaning.

*Public Employment.*—There was a gain of more than 500,000 in the number of people

employed on the program financed by the Emergency Relief Act of 1935 during the month ending January 15. Of the 3,000,000 employed on this work nearly 250,000 were working on the Federal program while projects operated by the Works Progress Administration gave employment to more than 2,750,000 people. Pay-roll disbursements for the month amounted to nearly \$140,000,000. Materials valued in excess of \$31,000,000 were purchased during the month.

There were approximately 200,000 people employed on Public Works Administration construction projects during January, a decrease of 35,000 as compared with December. Bad weather conditions and the nearing completion of the road-building program financed from old appropriations was the cause of the decrease. January pay-rolls exceeded \$14,000,000. Materials valued at nearly \$22,000,000 were purchased during the month.

Emergency conservation work (C.C.C. Camps) provided employment for 471,000 men during January. Of this number 421,500 were enrolled workers. In addition, there were 8,000 reserve officers, 2,000 educational advisers, and 39,000 supervisory and technical workers. January pay-rolls amounted to \$20,600,000.

The regular construction program of the Federal government as distinguished from the emergency programs gave employment to nearly 50,000 workers during January. This is a decrease of 7,000 as compared with December. January pay-rolls amounted to nearly \$4,000,000.

The various State governments employed in excess of 120,000 men in the construction and maintenance of roads during January. December employment totalled 150,000. These road workers earned in excess of \$7,000,000 during January.

---

The Italian law on Workmen's Compensation has recently been completely remodelled with the following major provisions effective July 1, 1936:—centralization of insurance in a single institution, automatic application of insurance to the worker, adequate curative assistance for all injured workers, replacement of lump-sum compensation by pensions, and reform of the procedure in disputes relating to industrial accidents.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the *LABOUR GAZETTE* for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wage Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable hours. These "A" conditions, in so far as

wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (Chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE* of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the work-people employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the

contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling etc.)*

Supply and erection of a Gravity 50,000 gallon Water Tank at Sarcee Camp, Calgary, Alberta. Name of contractors, Dominion Bridge Co., Ltd., Calgary, Alta. Date of contract, February 13, 1936. Amount of contract, \$5,950. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Engineers—2 drum.....	\$0 80	8
—1 drum.....	0 65	8
—Gas and Electric.....	0 55	8
Labourers.....	0 45	8
Painters and glaziers.....	0 75	8
Structural iron workers.....	0 80	8
Motor truck drivers.....	0 50	8
Carpenters.....	0 75	8
Concrete mixer operators.....	0 50	8

Supply and erection of structural steel for Landplane Hangar No. 1, at R.C.A.F. Station, Rockliffe, Ont. Name of contractors, Dominion Bridge Co., Ltd., Ottawa, Ont. Date of contract, February 5, 1936. Amount of contract, \$24,110. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Labourers.....	\$0 40	8
Hoist operators, gasoline.....	0 55	8
Hoist operators, steam.....	0 70	8
Structural steel erectors.....	0 80	8
Motor truck and driver.....	1 45	8
Motor truck driver.....	0 45	8
Steel welders on erection.....	0 80	8
Painters.....	0 60	8
" on and after Feb. 18, 1936....	0 65	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

##### *Contracts in Group "B" (Manufacture of Equipment, Supplies, etc.)*

Overhauling and modifying Fairchild Monoplane No. 640. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, February 8, 1936. Amount of contract, \$4,086. The "B" Labour Conditions above referred to were embodied in this contract.

Two standard equipped Fleet Model 7 Aircraft. Name of contractors, Fleet Aircraft of

Canada, Ltd., Fort Erie, Ontario. Date of contract, February 10, 1936. Amount of contract, \$5,703 each. The "B" Labour Conditions above referred to were embodied in the contract.

Overhauling and modifying Fairchild 71 Monoplane "XB". Name of contractors, MacDonald Brothers Aircraft, Ltd., Winnipeg, Man. Date of contract, February 11, 1936. Amount of contract, \$4,999. The "B" Labour Conditions were embodied in this contract.

Eight Avro Avian light Aeroplanes, Mark IV. Name of contractors, Ottawa Car Manufacturing Co., Ltd., Ottawa, Ont. Date of contract, February 10, 1936. Amount of contract, \$3,498 each. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Fairchild 71 Monoplane No. 636. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, February 15, 1936. Amount of contract, \$4,069. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Fairchild Monoplane No. 645. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, February 8, 1936. Amount of contract, \$3,952.74. The "B" Labour Conditions were embodied in the contract.

Six standard equipped Fleet Model 7 Aircraft. Name of contractors, Fleet Aircraft of Canada, Ltd., Fort Erie. Date of contract, January 17, 1936. Amount of contract, \$5,380.20 each. The "B" Labour Conditions were embodied in the contract.

Overhauling and modifying Fairchild Aircraft No. 646. Name of contractors Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, February 19, 1936. Amount of contract, \$3,912. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Atlas AC Landplane No. 16. Name of contractors, Armstrong Siddeley Motors Ltd., Ottawa, Ont. Date of contract, February 20, 1936. Amount of contract, \$6,794.41. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Atlas AC Landplane No. 17. Name of contractors, Armstrong Siddeley Motors Ltd., Ottawa, Ont. Date of contract, February 20, 1936. Amount of contract, \$7,094.41. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Moth 60M Aircraft No. 154. Name of contractors, Boeing Aircraft of Canada Ltd., Vancouver, B.C. Date of contract, Feb. 24, 1936. Amount of contract, \$1,621. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Fairchild 71 Monoplane 629. Name of contractors, Northwest Aero Marine Limited, Winnipeg, Man. Date of contract, February 29, 1935. Amount of contract, \$4,649.00. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Moth 60M Aircraft 65. Name of contractors, MacDonald Bros. Aircraft Ltd., Ottawa, Ont. Date of contract, February 29, 1936. Amount of contract, \$2,477.60. The "B" Labour conditions were embodied in this contract.

Overhauling and modifying Moth 60M Aircraft No. 105. Name of contractors, MacDonald Bros. Aircraft Ltd., Ottawa, Ont. Date of contract, February 29, 1936. Amount of contract, \$2,603.88. The "B" Labour conditions were embodied in this contract.

Overhauling and modifying Moth 60M Aircraft No. 161. Name of contractors, MacDonald Bros. Aircraft Ltd., Ottawa, Ont. Date of contract, February 29, 1936. Amount of contract, \$2,107.80. The "B" Labour Conditions were embodied in this contract.

Overhauling and modifying Moth 60M Aircraft No. 153. Name of contractors, MacDonald Bros. Aircraft Ltd., Ottawa, Ont. Date of contract, February 29, 1936. Amount of contract, \$2,378.70. The "B" Labour Conditions were embodied in this contract.

In addition to the foregoing, the Department of National Defence awarded the following contracts during the month of February, 1935, for various classes of manufactured goods, which contracts included in all cases the "B" Labour Conditions above referred to:—

Goods contracted for	Contractor
Cloth breeches, without stripe	Woods Mfg. Co., Ottawa, Ont.
Cloth breeches, with stripe	Woods Mfg. Co., Ottawa, Ont.
Leather mitts	Bowmanville Glove & Mitt Co., Bowmanville, Ont.
Horse rugs	Hugh Carson Co., Ltd., Ottawa, Ont.
Enamelware	General Steel Wares Ltd., Montreal, P.Q.
Moleskin pantaloons	Grant-Holden-Graham Ltd., Ottawa, Ont.
Cloth trousers	Grant-Holden-Graham Ltd., Ottawa, Ont.
Mackinaw coats	Grant-Holden-Graham Ltd., Ottawa, Ont.
Cartridges	Canadian Industries Ltd., Ottawa, Ont.
Fur caps	Jay Wolfe Inc., Montreal, P.Q.
Household soap	Colgate Palmolive Peet Co., Ltd., Toronto, Ont.
Overalls—combination	Canadian Converters Co., Ltd., Montreal, P.Q.
Cotton drawers and shirts	Mercury Mills Ltd., Hamilton, Ont.
Service shirts	Canadian Converters Ltd., Montreal, P.Q.
Housewives	Grant-Holden-Graham Ltd., Ottawa, Ont.
Shirt drill	Dominion Textile Co., Ltd., Montreal, P.Q.
Sun helmets	J. R. Shuttlesworth & Sons, Hamilton, Ont.
Peak caps	Ottawa Imperial Cap Co., Ottawa, Ont.
Tent pins	Dowdell Lees & Co., Ltd., Hamilton, Ont.
Cartridges	Canadian Industries Ltd., Montreal, P.Q.
Ankle boots	J. A. & M. Cote, Ltd., St. Hyacinthe, P.Q.
Leather bandoliers	J. E. Lortie Co., Ltd., Montreal, P.Q.
Tent flies	J. J. Turner & Sons Ltd., Peterboro, Ont.
Steel lockers	Dennistee Corporation Ltd., London, Ont.

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of repairs to wharf at Cowichan Bay, B.C. Name of contractors, Victoria Pile Driving Co., Victoria, B.C. Date of contract, February 17, 1936. Amount of contract, \$4,326.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Boorman.....	0 90	8
Bridgeman.....	0 90	9
Fireman.....	0 65	8
Labourer.....	0 40	8

N.B.—In any case where, by agreement or current practice the working hours of any class of workmen are less than 48 per week, such lesser hours shall not be exceeded on this contract.

Installation of a belt distributor at Postal Station "A", Toronto, Ont. Name of contractors, Mathews Conveyor Co., Ltd., Port Hope, Ont. Date of contract, October 22, 1935. Amount of contract, \$5,475.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 60	8
Cement finisher.....	0 70	8
Carpenters and joiners.....	0 80	8
Sheet metal workers.....	0 75	8
Electricians.....	1 00	8
Labourers.....	0 50	8
Teamster, team and wagon.....	1 00	8
Teamster.....	0 50	8
Motor truck driver and truck.....	1 55	8
Motor truck driver.....	0 55	8
Machinist.....	0 75	8
Millwright.....	0 75	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of repairs and extension to the wharf at Sept Isles, Saguenay Co., P.Q. Name of contractors, Cie de Construction de la Cote Nord Ltée., Québec, P.Q. Date of contract, February 4, 1936. Amount of contract approximately \$56,597.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 45	8
Boatmen.....	0 30	8
Carpenters and joiners.....	0 50	8
Compressor operator.....	0 40	8
Concrete mixer operator.....	0 40	8
Divers.....	1 00	8
Drill runners.....	0 40	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8
Drivers.....	0 30	8
Motor truck driver and truck.....	1 35	8
Motor truck driver.....	0 35	8
Hoist operators—steam.....	0 55	8
Hoist operators—gasoline.....	0 45	8
Labourers.....	0 30	8
Machinists.....	0 55	8
Pile driver runner.....	0 55	8
Powdermen.....	0 40	8
Quarrymen.....	0 35	8
Structural steel workers.....	0 65	8

Construction of a gun shed and caretaker's quarters addition to the Armoury at Gananoque, Ontario. Date of contract, October 23, 1935. Amount of contract, \$11,795. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	0 45	8
Cement finishers.....	0 55	8
Stonemasons.....	0 80	8
Stonecutters.....	0 70	8
Brick and hollow tile layers.....	0 80	8
Structural steel workers.....	0 80	8
Ornamental iron workers.....	0 55	8
Carpenters and joiners.....	0 60	8
Sheet metal workers.....	0 65	8
Roofers, felt and gravel.....	0 40	8
Lathers, metal.....	0 60	8
Plasterers.....	0 80	8
Plasterers' helpers.....	0 40	8
Painters and glaziers.....	0 55	8
Plumbers and steamfitters.....	0 65	8
Electricians.....	0 65	8
Labourers.....	0 35	8
Driver, horse and cart.....	0 50	8
Driver, team and wagon.....	0 65	8
Drivers.....	0 35	8
Motor truck and driver.....	1 40	8
Motor truck driver.....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a breakwater at Lac la Biche, Alta. Name of contractor, Mr. Alexander Hamilton, Lac la Biche, Alberta. Date of contract, January 28, 1936. Amount of contract, approximately \$11,990.40. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners.....	\$0 75	8
Blacksmith.....	0 67½	8
Blacksmith's helper.....	0 45	8
Driver.....	0 45	8
Driver, (team and wagon).....	0 75	8
Drillers (machine).....	0 55	8
Labourers.....	0 45	8
Powderman.....	0 55	8
Motor truck driver.....	0 50	8
Timberman or cribman using interchangeably such tools as broad-axe, x-cut saw, adze, saw, hammer, auger.....	0 50	8
Motor truck driver with truck.....	1 50	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers is less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a drill hall at R.C.N. Barracks, Esquimalt, B.C. Name of contractors, Parfitt Bros., Ltd., Victor, B.C. Date of contract, February 10, 1936. Amount of contract, \$55,825 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 50	8
Cement finishers.....	0 60	8
Stonemasons.....	0 90	8
Stonecutters.....	0 80	8
Brick and hollow tile layers.....	0 90	8
Structural steel workers.....	1 00	8
Ornamental iron workers.....	0 75	0
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 70	8
Roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 67½	8
Marble setters.....	0 95	8
Tile setters.....	0 90	8
Mastic floor layers:		
Rubbers.....	0 60	8
Spreaders.....	0 50	8
Kettlemen.....	0 50	8
Lathers, Metal.....	0 70	8
Plasterers.....	0 90	8
Plasterers' helpers.....	0 50	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 80	8
Electricians.....	0 75	8
Labourers.....	0 45	8
Driver, team and wagon.....	0 85	8
Motor truck driver.....	0 50	8
Motor truck driver with 1-2 ton truck.....	1 50	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a public building at Russell, Man. Name of contractor, Mr. Samuel Brown, Winnipeg, Man. Date of contract, October 23,

1935. Amount of contract, \$20,224 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 45	8
Cement finishers.....	0 55	8
Stonemasons.....	0 90	8
Stonecutters.....	0 80	8
Brick and hollow tilelayers.....	0 90	8
Structural steel workers.....	0 80	8
Ornamental iron workers.....	0 70	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 65	8
Roofers, felt and gravel.....	0 40	8
Terrazzo layers.....	0 67½	8
Marble setters.....	0 95	8
Lathers, metal.....	0 70	8
Plasterers.....	0 90	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 80	8
Electricians.....	0 75	8
Labourers.....	0 35	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

#### *Contracts in Group "B" (Interior Fittings, etc.)*

Supply and installation of interior fittings in the public building at Regina, Sask. Name of contractors, Regina Sash and Door Co., Ltd., Regina, Sask. Date of contract, December 17, 1935. Amount of contract, \$750. The "B" Labour Conditions above referred to were inserted in this contract.

Supply and installation of interior fittings in the public building at Elkhorn, Man. Name of contractors, Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, January 27, 1936. Amount of contract, \$1,129. The "B" Labour Conditions were inserted in this contract.

Alterations and additions to the interior fittings of the public building at Vernon, B.C. Name of contractors, The Office Specialty Manufacturing Co., Ltd., Newmarket, Ont. Date of contract, January 27, 1936. Amount of contract, \$2,440. The "B" Labour Conditions were inserted in this contract.

Supply and installation of new interior fittings in the public building at Trenton, Ont. Name of contractors, Canadian Office and School Furniture, Ltd., Preston, Ont. Date of contract, January 27, 1936. Amount of contract, \$1,497. The "B" Labour Conditions were inserted in this contract.

Supply and installation of interior fittings in the public building at Moncton, N.B. Name of contractors, Canadian Office & School Furniture Ltd., Preston, Ont. Date of contract, February 15, 1936. Amount of contract, \$21,435. The "B" Labour Conditions were inserted in the contract.

Supply and installation of interior fittings in the public building at St. Catharines, Ont. Name of contractors, Valley City Seating Co., Ltd., Dundas, Ont. Date of contract, February 17, 1936. Amount of contract, \$1,961. The "B" Labour Conditions were inserted in this contract.

Supply and installation of interior fittings in the public building at Guelph, Ont. Name of contractors, Tope Construction Co., Hamilton, Ont. Date of contract, January 31, 1936. Amount of contract, \$15,015. The "B" Labour Conditions were inserted in this contract.

#### POST OFFICE DEPARTMENT

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Post Office Department during the month of February, 1936, for various classes of manufactured supplies, which contracts included in all cases the "B" Labour Conditions above referred to:—

Goods contracted for	Contractor
Making metal dating stamps and type, brass crown seals, cancellers, etc.....	Pritchard-Andrews Co. Ltd., Ottawa, Ont.
Making and repairing rubber stamps, daters, etc.....	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Making and supplying Letter-Carriers' uniforms.....	Workman Uniform Co. Ltd., Montreal, P.Q.
Making and supplying Letter-Carriers' uniforms.....	Paton Mfg. Co., Ltd., Montreal, P.Q.
Making and supplying Letter-Carriers' uniforms.....	Wilfrid Rousseau, Montreal, P.Q.
Mail bag fittings.....	Fred W. Carling, Ottawa, Ont.
Stamping machines, etc.....	Machine Works Ltd., Montreal, P.Q.
Scales.....	Pritchard-Andrews Co. Ltd., Ottawa, Ont.

#### RAILWAYS AND CANALS

##### *Contract in Group "A" (Construction, Re-modelling, etc.)*

Construction of alterations to the floor system of the Rockfield Basculle Bridge over the Lachine Canal. Name of contractors, Dominion Bridge Co., Ltd., Lachine, P.Q. Date of contract, February 24, 1936. Amount of contract, \$5,675. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Structural steel workers.....	\$0 80	8
Carpenters.....	0 70	8
Labourers.....	0 40	8
Motor truck drivers.....	0 45	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week such lesser hours shall not be exceeded on this work.

#### ROYAL CANADIAN MOUNTED POLICE

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Royal Canadian Mounted Police during the month of February, 1936, for various classes of manufactured goods, which

contracts included in all cases the "B" Labour Conditions above referred to:—

Goods contracted for	Contractor
Packing cases.....	Cameron & Co., Ottawa, Ont.
Scarlet serge cloth.....	Paton Mfg. Co., Ltd., Montreal, P.Q.
Miscellaneous badges.....	The J. R. Gaunt & Son, Ltd., Montreal, P.Q.
Fish nets.....	John Leckie Ltd., Montreal, P.Q.
Electric floor machine, brushes tank, etc.....	The Frank P. Lalonde Ltd., Montreal, P.Q.
Cotton sheets.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Hand towels.....	Caldwell Linen Mills Ltd., Iroquois, Ont.
Combination underwear.....	The C. Turnbull Co., Ltd., Galt, Ont.
Electric lamps.....	Canadian Westinghouse Co., Ltd., Ottawa, Ont.
Eiderdown robes.....	Woods Mfg. Co., Ltd., Ottawa, Ont.
Socks.....	Mercury Mills Ltd., Hamilton, Ont.

#### Co-operative Industrial Relations Plan at Consolidated Smelters

A system of co-operative working relations under which the Consolidated Mining and Smelting Company of Canada and its employees operate the plants and mines at Trail and Kimberly, B.C., and determine wages on the basis of efficiency of the workmen, volume of production and net profits, is described in an article by H. B. Smith in a recent issue of the *Western Canada Coal Review*.

During its eighteen years of existence, it is pointed out that the organization plan of the company has become broadened until the "industrial life of the plants come more or less under the guidance and management of the central control body known as the Workmen's Co-operative Committee," composed of one representative from each of the departments of the plant elected by the men working in that department and the general manager.

The purpose of the committee is "to operate the plant fairly and safely for both company and men; to try to correctly interpret the ideas of the management to the men and those of the men to the management."

Among the features of the plan is what is known as the open transfer system designed "to give security to good men, and to protect them from possible unfair discharge." According to the article, wages are worked out in two ways. "Basic wages are determined by local living costs, which roughly, are the local cost of food, clothing and shelter plus a little more. Bonuses are based upon the workman's efficiency, the volume of the company's production and the net profits of operation."

With respect to the working period, it was explained that "in normal times the eight hour day and seven day week was the rule, but when production had to be cut, back in 1930, a new arrangement as regards hours had to be effected. At first, the working time of single men was reduced to 50 per cent and married men to 75 per cent. Latterly by stages, single men's time was increased until they were equal to the married men, making a 40-hour week for all hands."

Other features of this co-operative relationship include: safety committees for the conservation of health and the prevention of accidents; medical service and hospitalization for employed men and their dependents; group insurance; and an assisted home building program.

The company employs approximately 5,000 men and is engaged in the mining and smelting of copper, silver, lead, zinc, etc.

Reference was made in the LABOUR GAZETTE for August, 1935, page 714, to the report and recommendations of the Home Office Departmental Committee (Great Britain) which had inquired into the employment of women and young persons on the two-shift system. During its committee stage in the House of Commons the Bill embodying the recommendations was amended whereby application to employ women and young persons on a two-shift system temporarily could be dealt with by the chief inspector of factories, or by any superintending inspector, provided that no authorization given by the inspectors should be extended for more than six months.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

HALIFAX, N.S.—A CERTAIN NEWSPAPER PUBLISHER AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 330

The agreement covers stereotypers as well as printing pressmen.

Agreement to be in effect from January 1, 1936 to December 31, 1936.

Only union members to be employed, if available, and foremen must also be union members.

Hours: 8 per day, a 48 hour week for both day and night work.

Overtime: time and one half; Sundays and holidays, double time, except for night shifts which begin or extend into Sunday or a holiday.

Wage rates for journeymen pressmen and stereotypers: \$24 per week for day work and \$25 for night work.

Wage rates for apprentices from \$12 per week during first year to \$20 during second half of fifth year.

Any disputes are to be settled by conciliation and arbitration.

EDMONTON, ALBERTA.—TWO DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255

Agreement to be in effect from May 28, 1935, to May 27, 1937, except that the wage scale may be reconsidered at the end of one year if due notice is given.

This agreement is similar to the one previously in force which was summarized in the LABOUR GAZETTE, March, 1934, page 275, and the renewal noted in the June, 1934, issue, page 565.

The wage rate is unchanged at 85 cents per hour with a 45 hour week.

EDMONTON, ALBERTA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255

Agreement to be in effect from May 16, 1935 to May 15, 1936.

This agreement is a renewal of the agreement previously in effect which was summarized in the LABOUR GAZETTE, March, 1934, page 275, and the renewal noted in the June, 1934, issue, page 566.

Wages for journeymen pressmen are unchanged at 85 cents per hour for day work and 90 cents for night work, with a 44 hour week for day work and a 42 hour week for night work.

CALGARY, ALBERTA.—A CERTAIN DAILY NEWSPAPER PUBLISHER AND THE CANADIAN PRINTERS' UNION, LOCAL No. 1.

Agreement to be in effect from February 10, 1935, to July 7, 1938.

This agreement is similar to the one made with another newspaper publisher, which was noted in the LABOUR GAZETTE, December, 1935, page 1154, with the exception of the wage scale.

Wages per hour for journeymen compositors: 75 cents per hour for both day and night work until August 1, 1935, and 85 cents thereafter. Hours are 45 per week.

(A dispute occurred in this establishment on January 10, 1935, following a decrease in wages from 85 cents per hour to 75 cents, the workers involved being replaced.)

### Construction: Buildings and Structures

CALGARY, ALBERTA.—CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAM-FITTERS, LOCAL No. 496

Agreement to be in effect from November, 1935, to March 31, 1937, and thereafter from year to year until notice.

Only union members to be employed and union members are to work only for members of the employers' association.

Hours: 8 per day, 5 days per week, a 40 hour week.

Overtime: time and one half until midnight; after midnight double time; Saturday afternoons from noon to 5 p.m., time and one half. If required for jobbing work and emergency work on Saturday mornings, it will be done at single time. Work on Saturdays not otherwise provided for, work on Sundays and six specified holidays, double time.

Journemen sent to work out of the city to have fare and travelling time paid, and one journeyman plumber and one journeyman steamfitter on each such job to have his board paid by the employer.

Minimum wages for journeymen plumbers and steamfitters: 90 cents per hour until April 30, 1936 and 95 cents from May 1, 1936. (The 90 cent per hour rate was established by verbal agreement September 19, 1934 and has been in effect since that date.)

Each shop allowed one plumber's apprentice only. Apprentices to serve five years. No steamfitter allowed more than one helper.

Any dispute which cannot be adjusted by the union to be referred to a Joint Conference Board.

### Collective Labour Agreements Extension Act of Quebec

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on this page:—

Building Trades, Sherbrooke

Sheet Metal Workers, Montreal

Barbers, St. Hyacinthe, Drummondville and Granby (Amendment)

Millinery Workers, Montreal (Amendment)

Bakers and Salesmen, Three Rivers (Amendment)

Men's Clothing Workers, Province of Quebec (Amendments)

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Act of Quebec include the extension to all employees and employers in the same industry or business and in the same district, by Orders in Council, of two agreements which are summarized below, and of amendments and corrections to six other agreements, also noted below. Notices of applications for changes in agreements already in effect under Orders in Council appeared in the *Quebec Official Gazette* as follows: building trades, Montreal, bread salesmen, Quebec, and longshoremen (inland navigation) Montreal in the issue of February 1, and bakers, Montreal, in the issue of February 8. Notices of application for the extension of an agreement affecting stone-cutters (other than granite and marble cutters) throughout the Province was published in the issue of February 1, and a correction to it in the issue of February 8, of an agreement affecting plumbers at Hull in the issue of February 22, and of an agreement affecting printing trades at Montreal in the issue of February 29. A correction to the request for the extension of the building trades agreement in Sherbrooke was published in the issue of February 1.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following

thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**BUILDING TRADES, SHERBROOKE AND DISTRICT.**—An Order in Council, approved February 7, and published in the *Quebec Official Gazette*, February 8, makes obligatory the terms of an agreement between l'Association des Entrepreneurs en Construction de Sherbrooke (the Association of Building Contractors of Sherbrooke), l'Association des Maîtres-Plombiers et Mécaniciens en Tuyauterie de Sherbrooke (the Association of Master Plumbers and Steamfitters of Sherbrooke) and Le Conseil Central des Syndicats Catholiques Nationaux de Sherbrooke, Inc. (The Central Council of National Catholic Unions of Sherbrooke, Inc.).

The territorial jurisdiction comprises the counties of Sherbrooke, Richmond, Wolfe,

Compton, Frontenac, Stanstead, Shefford, Brome and Missisquoi.

The agreement is in effect from February 8, 1936, to April 30, 1937, and thereafter from year to year until either party gives notice of change.

Wages per hour in the city of Sherbrooke and within five miles of its limits and in municipalities of a population of 5,000 or more and also in municipalities of a population of less than 5,000 for a general contract of more than \$10,000: bricklayers, plasterers and masons—contractors (personal services) 70 cents, journeymen 60 cents; carpenters and joiners—contractors (personal services) 60 cents, journeymen 50 cents, apprentices from 30 cents during first year to 45 cents during fourth year; painters and paperhangers—contractors (personal services) 60 cents, journeymen 50 cents; painters—contractors (personal services) 55 cents, journeymen 45 cents, apprentices from 25 cents during first year to 40 cents during fourth year; plumbers and steamfitters—contractors (personal services) 75 cents, journeymen 50 cents, junior journeymen 35 cents for first six months and 40 cents for second six months, apprentices from 15 cents during first year to 30 cents during fourth year; tinsmiths and roofers—contractors (personal services) 75 cents, journeymen 50 cents; electricians—contractors (personal services) 85 cents, journeymen 50 cents, apprentices from 15 cents during first year to 30 cents during fourth year; stationary enginemen and mechanics 60 cents per hour or \$30 per week; firemen 45 cents, metallic framing erectors 50 cents, labourers 30 cents. For plumbers and steamfitters and tinsmith roofers, all work on Sundays and holidays, time and one half. For work done by these trades away from the place of residence of the tradesman, travelling expenses and board to be paid by employer.

Wages per hour in the rest of the territorial jurisdiction on contracts of less than \$10,000: bricklayers, plasterers and masons—contractors (personal services) 60 cents, journeymen 50 cents; carpenters and joiners—contractors (personal services) 50 cents, journeymen 40 cents, apprentices from 20 cents during first year to 35 cents during fourth year; painters and paperhangers—contractors (personal services) 50 cents, journeymen 40 cents; painters—contractors (personal services) 45 cents, journeymen 35 cents, apprentices from 20 cents during first year to 32 cents during fourth year; tinsmiths and roofers—contractors (personal services) 60 cents, journeymen 40 cents; plumbers and steamfitters—contractors (personal services) 60 cents, journeymen 40 cents, junior journeymen 30 cents during first six months and 32 cents during second six months, apprentices from 10 cents per hour during first year to 25 cents during fourth year; electricians—contractors (personal services) 70 cents, journeymen 40 cents, apprentices from 10 cents per hour during first year to 25 cents during fourth year, labourers 25 cents.

Journeymen who, due to advanced age or infirmity, are unable to give the service of a competent worker may have their case referred to the Board of Examiners of the Joint Committee of the trade who may revise the wage rate for such journeyman.

Maintenance men employed in churches, chapels or buildings used as churches or chapels, seminaries, universities, colleges, orphan asylums, asylums, refuges, charity vents, monasteries, public or private hospitals, workrooms, to be paid the following minimum wage rates: in municipalities of a population

of 5,000 or more, skilled workmen \$18 per week, labourers \$12. If the employee rooms or boards in the establishment, the employer may charge a maximum of \$3 per month per room and 25 cents per meal.

One apprentice allowed to each five journeymen or fraction of five, in the bricklayer, plasterer, mason, carpenter, joiner and painter trades. In the plumber and steamfitter trade, one apprentice allowed to each journeyman or junior journeyman; one junior journeyman allowed to two journeymen.

Apprenticeship to be 48 months' work under a contractor approved by the Joint Committee; however when an apprentice attends a special course in an industrial school, the months at the school to be deducted from the apprenticeship period, provided that the studies be done jointly with the work.

Building contracts signed before this Order in Council approved are not subject to its provisions, unless such provisions were included in the previous agreement which was also approved by Order in Council.

**SHEET METAL WORKERS, MONTREAL AND DISTRICT.**—An Order in Council, approved February 14 and published in the *Quebec Official Gazette*, February 15, makes obligatory the terms of an agreement between certain sheet metal firms of Montreal and the Montreal Sheet Metal Workers' Union.

The territorial jurisdiction comprises the Island of Montreal, Bizard Island and the counties of l'Assomption, Terrebonne, Laval, Two Mountains, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Châteauguay, Laprairie, Chambly and Verchères. (The application for extension of this agreement included the whole Province in the jurisdiction, but following objections it was restricted to this district.)

The agreement is in effect from February 15, 1936, to March 31, 1936.

The industrial jurisdiction exempts the manufacture, on a quantity production basis, when not of a competitive nature, of galvanized range boilers, milk cans, drinking pails, first-aid boxes, towel boxes, refrigerators, water coolers, shipping containers of ten gallon capacity and less, tin and galvanized wares. The aircraft industry was also excluded after objections had been made.

Hours: 8 per day, 44 per week.

Overtime: time and one quarter.

Minimum wages per hour: sheet metal workers (skilled mechanics) 60 cents, assemblers 45 cents, machine operator 45 cents, sheet metal helper 35 cents. Workmen incapacitated by age or infirmity may be employed at a lower wage rate but not more than one such man to every ten regular men may be employed. No employee may have his wage rate reduced as a result of this agreement coming into effect.

All contracts entered into by the employers with general contractors, private owners or otherwise before the passing of this Order in Council are exempt.

Apprentices to serve four years. One apprentice allowed to every five sheet metal workers (skilled mechanics) in each shop. No wage rates are stipulated for apprentices.

**BARBERS AND HAIRDRESSERS, SAINT HYACINTHE AND DRUMMONDVILLE.**—An Order in Council, approved February 7, and published in the *Quebec Official Gazette* February 8, amends the original Order in Council for this trade

(LABOUR GAZETTE, July, 1935, page 631 and amendment in October issue page 954) by including in the territorial jurisdiction the town of Granby and the area within 2 miles of its limits and providing that in this new locality barber shops may be kept open one hour later on Saturdays than in the other two towns and that in Granby the hours for hairdressers be the same as for barbers.

**MILLINERY WORKERS, MONTREAL.**—An Order in Council approved February 7, and published in the *Quebec Official Gazette* February 8, amends the original Order in Council for this industry (LABOUR GAZETTE, August, 1935, page 732), by extending the period of the agreement to February 15, 1937 with a provision that on or about January 15, 1937, the joint committee meet and discuss the question of renewing the agreement.

**BAKERS AND BAKERY SALESMEN, THREE RIVERS.**—An Order in Council, approved February 7, and published in the *Quebec Official Gazette* February 8, amends the original Order in Council for these workers (LABOUR GAZETTE, February 1935, page 148, with amendments in May issue page 426, October issue page 954 and January 1936 issue page 89) by extending the period during which the wage rate for bakery salesmen is \$9 plus a commission of 7 per cent on money collected, from November 30, 1935 to November 30, 1936.

**MEN'S, BOYS' AND JUVENILES' CLOTHING, PROVINCE OF QUEBEC.**—An Order in Council, approved February 12 and published in the *Quebec Official Gazette*, February 15, amends the original Order in Council for this industry (LABOUR GAZETTE, March, 1935, page 238, with amendments in April issue page 323, August, page 733, November page 1064 and February 1936, page 200) by the limiting of the proportion of apprentices allowed as follows: in Zone I the number of apprentices in a factory may not exceed  $7\frac{1}{2}$  per cent of the total number of employees of that factory, in Zone II not more than 20 per cent and in Zone III not more than 25 per cent. In establishments where a higher percentage is presently employed, the manufacturer is to provide for the gradual promotion of such apprentices in order to eventually bring the proportion down to the percentage allowed. In Zones II and III, if sufficient qualified workers cannot be secured, the joint committee may give a special permit to employ an increased proportion of apprentices but such additional number may not exceed 10 per cent of the total number of employees in the factory. Basting pullers are not included in the percentages mentioned. It is also provided that, except for just causes, no employer may discharge or suspend a qualified worker or apprentice to replace such worker with an apprentice of less experience or lower standing.

A further Order in Council, approved February 20, and published in the *Quebec Official Gazette* February 22, makes a correction in the wording of the February 12 Order in Council but this does not affect the summary here given.

**CLOAK AND SUIT MAKERS, PROVINCE OF QUEBEC.**—A correction to the Order in Council for these trades (LABOUR GAZETTE December 1935, page 1156) was published in the *Quebec Official Gazette*, February 1, making a change in the wording of one clause which does not affect the summary as given in the LABOUR GAZETTE.

**BUILDING TRADES, LAKE ST. JOHN DISTRICT.**—A correction to the Order in Council for these trades (LABOUR GAZETTE, January page 88) changes the clause concerning workmen sent to work out of their own localities to provide that the employer pay travelling expenses and board. (The original version stated that these expenses be paid only if the workmen were sent for less than week, but "less than a week" is omitted in the corrected version.)

### Business Conditions in Canada in 1935

The trend of economic conditions was irregularly upward during the calendar year 1935, according to a summary by the Dominion Bureau of Statistics. Many readjustments are still necessary, and Canadians have difficult problems to face but on the whole constructive factors dominate the situation. Dominion Government bonds sold during the greater part of the year at prices affording exceedingly low yields to the purchaser, cheap money being a potent influence for recovery. The deposit liabilities of the banks increased since the summer of 1934, the security holdings and readily available assets reached abnormally high levels.

Industrial production in the United States and Great Britain, with which Canada has close trading relations, recorded gains over 1934. The volume of Canadian crops, despite the decline in the wheat harvest, was greater than in the preceding year. The activity of the industries producing materials for the expansion of plant and equipment was considerably accelerated in 1935. This suggests that many enterprises are preparing for greater operations in the near future.

The production of manufacturing plants, according to the official index, was appreciably in advance of the preceding year, while the gain in employment was more than 7 per cent. The iron and steel and other industries engaged in the production of industrial equipment showed marked gains. The food and textile industries producing consumers' goods were also active. The automobile industry took on a new lease of life in 1935, the gain in output being about 30 per cent, and the oil industry reported further progress.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1936

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was slight. Both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices on a weekly basis were, however, somewhat lower week by week than in the previous month.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$8.07 at the beginning of February as compared with \$8.17 for January; \$7.59 for February, 1935; \$6.67 for March, 1933 (the low point in recent years); \$11.83 for February, 1930; \$10.61 for February, 1922; \$16.92 for June, 1920 (the post-war peak); and \$7.75 for February, 1914. Eggs were substantially lower in price in February than in the previous month but other changes were of a minor nature, the most important being decreases in butter, lard and sugar, and advances in meats, flour and potatoes. Of the twenty-nine items in the budget thirteen were lower, ten higher and six unchanged. Including the cost of fuel and rent with that of foods the total budget was \$16.58 at the beginning of February; \$16.68 for January; \$16.06 for February, 1935; \$15.41 for June, 1933 (the low point in recent years); \$22.12 for February, 1930; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post-war peak); and \$14.54 for February, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 72.5 for the week ended February 28; 72.6 for the previous week; 72.7 for the week ended January 31, and 72.3 for the week ended March 1, 1935. On a monthly basis this index was 72.9 for January, 1936; 71.9 for February, 1935; 63.5 for February, 1933 (the low point in recent years); 93.9 for February, 1930; 102.2 for February, 1926; 98.3 for February, 1922; 164.3 for May, 1920 (the post-war peak); and 64.8 for February, 1914. In textiles raw silk and raw cotton were lower as was also live stock in the animal products group. Copper was the only basic commodity of importance to show advance. Wheat, rubber, coffee, tin, zinc, and silver were little changed.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada.

All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the *LABOUR GAZETTE*, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the *LABOUR GAZETTE* for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

(Continued on page 284.)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

p Six roomed houses not extensively occupied by workmen but some at \$35-\$50, according to condition and conveniences.  
r Mining company houses in district \$5-\$10 per month; others, five and six rooms, \$10-\$35. s Delivered from mines.

(Continued from page 276)

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

With the exception of breakfast bacon meat prices averaged higher in February than in the previous month, sirloin steak advancing from an average of 22.9 cents per pound to 23.2 cents; shoulder roast of beef from 12.5 cents per pound to 12.9 cents; roast of veal from 14.1 cents per pound to 14.7 cents and fresh pork roast from 21.1 cents per pound to 21.3 cents. The price of lard averaged lower than in the previous month but considerably higher than a year ago. The figures are: 17.2 cents per pound in February, 17.9 cents in January and 14.9 cents in February, 1935.

Egg prices averaged higher in the maritime provinces than in the others. The Dominion average for the fresh grade was down from 41.5 cents per dozen in January to 33.9 cents in February and for the cooking grades from 33.9 cents to 28.9 cents. Creamery butter averaged  $\frac{1}{2}$  cent per pound lower at 30.1 cents. The price of potatoes averaged \$1.31 per ninety pounds in February as compared with \$1.24 in January and 75 cents in February, 1935. Granulated sugar was fractionally lower at 6.2 cents per pound. United States anthracite coal at \$14.87 per ton was little changed from the

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

†For the week ended February 28, 1936; monthly figures not yet available.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and other countries.)

## Automobile Tourist Traffic

In an article aptly headed "A Neighbourly Invasion," which appears in the current issue of the *National Revenue Review* (published by the Department of National Revenue), some interesting information is given respecting the increasing importance of automobile tourist traffic. Figures compiled by the Department of National Revenue from returns furnished by its collectors show that the total number of foreign cars entered in 1935 was 3,605,086 compared with 3,261,848 entered in 1934, an increase of 343,238. Last year's figures were made up as follows: automobiles entered for periods of over 48 hours and not exceeding 60 days 971,017, increase 83,146; automobiles entered for periods over 60 days and not exceeding six months 1,128, increase 799; automobiles entered for periods up to 48 hours 2,632,941, increase 259,293.

A statement of entries by provinces shows that Ontario retained her unchallenged lead in 1935, having entered 2,374,517 foreign cars for touring purposes. This shows a drop, however, of 97,983 cars compared with 1934. Totals for other provinces, showing 1934 figures in brackets, were:—

Quebec, 481,893 (425,634); New Brunswick 545,555 (178,893); British Columbia, 116,883 (110,041); Manitoba, 40,805 (34,815); Saskatchewan, 22,983 (20,027); Alberta, 20,234 (18,135); Nova Scotia, 2,216 (1,803). The apparent increase in the New Brunswick total is due largely to account being taken last year, by some ports, of local traffic not representing tourist traffic except in a limited degree.

The three leading ports of entry in Canada for foreign automobile tourist traffic during 1935 were the Ontario ports of Windsor, Fort Erie and Niagara Falls.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1935," which is a supplement to the January issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1930=100, was 91·8 for January, an increase of 0·4 per cent for the month. Both food and industrial materials were slightly advanced.

The *Statist* index number, on the base 1867-1877=100, was 86·7 at the end of January, showing no change from the previous month's level. An increase in food prices was offset by a decline in the minerals and the textiles groups.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July 1914=100, was 147 at February 1, showing no change from the previous month. Food prices were slightly lower due to lower prices for eggs, partly offset by a rise in the prices of potatoes.

### Germany

**WHOLESALE PRICES.**—The Federal Statistical Office index number, on the base 1913=100, was 103·6 for January, an increase of 0·2 per cent for the month. There were no very marked changes in any of the groups except rubber which advanced 7·5 per cent.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 124·3 for January, an increase of 0·7 per cent for the month. All groups showed slight advances except rent which was unchanged.

### New Zealand

**WHOLESALE PRICES.**—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1414 for December, a decrease of 0·4 per cent for the month, due chiefly to lower prices for agricultural products.

**COST OF LIVING.**—The official index number, on the base 1926-1930=1000, was 851 for

November, an advance of 1·8 per cent over the August level, due to advances in the food and the heat and light groups.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 80·9 for December, an increase of 0·4 per cent for the month due chiefly to advances in farm products, foods, hides and leather products.

**COST OF LIVING.**—The National Industrial Conference Board index number, on the base 1923=100, was 84·8 for January showing no change from the December level. A small increase in the housing group was offset by declines in food and in clothing prices.

### Occupational Accidents in United States

Occupational accidents in 1935 resulted in approximately 16,500 deaths, 63,000 permanent disabilities, and 1,340,000 temporary injuries in the United States according to a summary published by the National Safety Council in the March issue of *National Safety News*. These are increases of about 3 per cent over the comparable figures for 1934. Wage losses, medical expense, and the overhead costs of insurance are estimated to be in the neighbourhood of \$620,000,000.

Less than half as many persons are killed in occupational accidents to-day as was the case 25 years ago before the possibilities of accident prevention were recognized. The National Safety Council recently estimated that during the years of organized industrial safety work, from 1913 to 1935, the lives of about 250,000 workers have been saved. This also represents a money saving of about \$3,500,000,000 to these workers, the families dependent on them, and the general public. In plants reporting to the National Safety Council the industrial accident rate per million man-hours decreased about 10 per cent from 1934 to 1935. This is at least a tentative indication that the 3 per cent increase in the national accident total came from an increase in employment rather than from a fundamentally worse accident experience.

## IMMIGRATION TO CANADA DURING THE CALENDAR YEAR 1935

THE Department of Immigration and Colonization has issued information as to immigration into Canada during the calendar year 1935 and the accompanying tables show its nature and extent with some comparative figures for 1934.

The total number of immigrants during the year was 11,277, of whom 2,103 or 19 per cent were British; 5,291 or 47 per cent from the United States; 631 or 6 per cent were of Northern European races; and 3,252 or 29 per cent were of other races. In 1934 the total number of immigrants was 12,476, of whom 17 per cent were British; 49 per cent from the United States; 5 per cent were of

Northern European races; and 29 per cent of other races.

The numbers of Canadian citizens who left Canada to reside in the United States and who returned to Canada declaring their intention of resuming their residence in Canada are not included in the statistics of immigration but are given in a separate table. These totalled 6,378 in 1935 as compared with 7,272 in 1934.

The report of the Department of Immigration and Colonization for the fiscal year ended March 31, 1935, has recently been issued. It gives detailed information in tabular form as to the origin and numbers of immigrants during the year with comparative figures for earlier years. The total number for the twelve months ended March 31, 1935, was 12,136 as compared with 13,903 in the previous year.

### Labour Banks in the United States

According to an article, appearing in the February issue of the *Monthly Labour Review* of the United States Department of Labor, there were four labour banks in operation on June 30, 1935, with combined deposits of \$17,262,281 and total resources amounting to \$19,692,385. This was an increase of 8.6 per cent in deposits and of 2.7 per cent in assets from the preceding year. It is pointed out that the peak of the labour banking movement was reached in 1926, when over \$108,700,000 was on deposit in 35 such banks and the total resources amounted to more than \$126,500,000. The banks in operation that year had surplus and undivided profits totalling about \$3,800,000. In the next year began a decline which lasted through 1933. At the end of the latter year only 4 banks were still in operation. The end of 1934 showed some decline in the surplus, but both deposits and total assets had increased during the year, an increase which continued

in 1935. In 1935 the surplus also showed a rise of 4.3 per cent.

Canada's maple trees yielded 2,251,000 gallons of maple syrup in 1935 compared with 1,838,000 gallons in 1934, an increase of 22.5 per cent. Production of maple sugar was 6,539,000 pounds compared with 4,941,000, an increase of 32.3 per cent. The entire output expressed in pounds of sugar was 29,047,000 pounds compared with 23,325,000 pounds in 1934. Of this quantity approximately 21.5 million pounds were produced in Quebec, 7 millions in Ontario, and the remainder in the Maritime Provinces. The value of the entire crop was \$3,522,000, the largest figure in a number of years. The average prices were \$1.24 per gallon of syrup and 11 cents per pound of sugar.

Exports during the fiscal year 1934-35 amounted to the equivalent of 4,241,000 pounds of sugar, the greater part of which went to the United States, where it is used largely for flavouring tobacco.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1935

### Analyzed According to Industries, Localities and Months

AN analysis of fatal industrial accidents in Canada during the calendar year 1935, by industries, causes, provinces and months is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course of, or arising out of, their employment. Also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly statements, each giving a table of accidents occurring during the period covered, appeared in the *LABOUR GAZETTE* for May, August and November, 1935, and February, 1936.

The record is compiled from reports from the following governmental authorities: The Board of Railway Commissioners for Canada; the Explosives Division of the Federal Department of Mines; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia; the Ontario Chief Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were received from the correspondents of the *LABOUR GAZETTE*, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces and Table III by months, these last two also including summary figures for 1934, which are a final revision of the figures published in the *LABOUR GAZETTE*, March, 1935, by the inclusion of accidents occurring in 1934 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the *LABOUR GAZETTE*, May, August and November, 1935, and February, 1936. The figures for 1935, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1934.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in indus-

trial conditions. For example, in the mining group there was an increase in the number of fatalities from 144 to 170, in the manufacturing group from 103 to 123, apparently arising out of increased employment in these industries during 1935, with relative increase in exposure to risk. As compared with 1934, there were no marked changes in the accident figures for 1935 in any industry, due to major disasters.

There was one disaster during the year under review which occurred at Coalhurst, Alberta, on December 9, when sixteen coal miners were killed by an explosion caused by ignition of gas in a mine. These miners were just going on the night shift when the disaster occurred. There were only 30 men working on a slack time schedule in the mine at the time. Following the coroner's inquest and in response to a request from a delegation of miners, the provincial attorney-general announced that a complete inquiry into the disaster would be made, to open on February 3. No report of this investigation has been received to date.

About January 27 a serious accident occurred in metalliferous mining in which seven miners lost their lives when their camp was buried under a snowslide, at Taseko Lake, British Columbia.

Another serious accident occurred in coal mining when seven miners lost their lives following an explosion of an improperly loaded charge of explosive at Stellarton, Nova Scotia, on April 16. Four of these men are believed to have been killed instantly by the blast, while the other three were gassed when trapped in a shaft.

When a motor vessel foundered and sank in a storm, off Judique, Cape Breton, Nova Scotia, on September 22, five members of the crew, including the captain, perished. When buried under a snowslide at Coryell, British Columbia, on January 24, a railway roadmaster, foreman and labourer lost their lives. On June 26, three men died when overcome by gas in a well, on a farm near Sedalia, Alberta. A fall of rock killed three miners at Froot, Ontario, on June 25. When two ships collided in a fog, in the Gulf of St. Lawrence, Quebec, on June 16, a seaman, boatswain and stoker were drowned. On May 17, three firemen were crushed by a falling wall while fighting a fire at a convent, at Joliette, Quebec. While attempting to remove a public danger at an abandoned magazine at Waverley, Nova Scotia, on July 25, an explosion of nitro-glycerine occurred, causing the deaths of an explosives engineer, a district manager and a works man-

ager of an explosives company. On October 17, three fishermen were drowned near Digby, Nova Scotia, when a scallop dragger collapsed; and four fishermen were drowned near Caraquet, New Brunswick, on November 8, when a dory capsized. On October 5, near Benito, Manitoba, a R.C.M.P. constable and a municipal constable were slain by three robbers whom they were transporting as prisoners, and two days later a R.C.M.P. sergeant and constable were shot while attempting to recapture these three bandits near Canmore, Alberta.

#### Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 254, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus

caused, 69, appear under the heading, automobiles and other power vehicles and implements. Also 67 were caused by persons being struck or run over by, or crushed by or between cars and engines, 40 of these being engaged on steam railways; 60 were in connection with watercraft (11 of these being in logging, rafts, etc., 22 in fishing and trapping and 20 in water transportation); 18 were caused by mine and quarry cars; 17 by animal drawn vehicles and implements (10 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 12 by persons falling from or in cars or engines; 9 were due to derailments and collisions (all of which were in steam railways); and 3 by aircraft.

Next in order as a cause came dangerous substances, 162 in number, of which 45 were due to explosive substances, 31 to hot and inflammable substances and flames, 29 to electric current, 19 to mine explosions from gas, coal dust, etc., 16 to conflagrations, 14 to gas fumes, etc., and 8 to steam escapes, boiler explosions or compressed air.

"Falls of persons" caused 148 fatalities, including 45 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 39 falls from elevations, 18 due to collapse of support, 13 falls from loads, etc., 8 on sharp objects, 6 down stairs and inclines, 5 from ladders, 5 into holds of vessels, 5 into tanks, vats, kilns, etc., and 4 due to falls on the level.

Fatalities numbering 141 were caused by "falling objects," of which 58 were due to falling trees and limbs, 52 to objects falling in mines and quarries, 18 to objects falling from elevations, loads, piles, 6 to collapse of support, 3 to breaking or loosening of straps, cables, etc., and 4 to other falling objects.

Animals caused 42 fatalities, including 29 due to horses; and 27 were caused by working machines. Fatalities numbering 27 were caused by striking against or being struck by objects, of which 22 were due to being struck by objects, and 5 to striking against objects. There were 24 fatalities caused by prime movers, 30 in connection with the handling of

heavy or sharp objects, 17 caused by hoisting apparatus and 10 by tools.

The category "other causes" includes 98 fatalities, of which 4 were deaths following infection, not elsewhere specified, 28 due to industrial disease, strain, etc., 16 to shooting and violence, 26 to cave-ins, land slides, ice jams, etc., 23 to lightning, frost, storms, sun-stroke, and 1 accident as to which no particulars were available.

### Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 327, occurred in Ontario. There were 218 in Quebec, 158 in British Columbia, 81 in Nova Scotia, 76 in Alberta, 42 in Manitoba, 39 in Saskatchewan, 22 in New Brunswick and 9 in Prince Edward Island. In Ontario the largest proportion of fatalities occurred in transportation and public utilities, where there were 57, with 56 in agriculture, 56 in mining, non-ferrous smelting and quarrying, 45 in manufacturing, 42 in construction, 27 in logging, 19 in service, 16 in trade, 7 in electric light and

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the provinces in which the various ships were registered, and exclude accidents to Canadian fishermen and seamen on boats registered in another country. For quarterly reports of accidents see the LABOUR GAZETTE for May, August and November 1935, and February 1936.

(b) Revised figures for 1934.

power, and 2 in fishing and trapping. In Quebec the largest number, 43, was also in transportation and public utilities, with 36 in logging, 26 in manufacturing, 24 in service, 23 in construction, 22 in agriculture, 16 in mining, non-ferrous smelting and quarrying, 13 in trade,

10 in electric light and power, 4 in fishing and trapping and 1 in finance. In British Columbia there were 43 fatalities in logging, 32 in mining, non-ferrous smelting and quarrying, 28 in transportation and public utilities, and 25 in manufacturing. In Nova Scotia and Alberta

(a) Decennial census of 1931. (b) Annual census of industry, 1933. (c) Annual census of industry, 1934. (d) Fishermen only, annual census of industry, 1934. (e) Revised figures for 1934.

there were respectively 24 and 34 fatalities in mining, non-ferrous smelting and quarrying, and no other industry suffered so many fatalities in these provinces. In Saskatchewan the largest number, 18, was in agriculture. Transportation and public utilities, in which there were 8 fatalities, had the greatest number in Manitoba; and fishing and trapping was the highest in New Brunswick with 5 fatalities.

### Fatalities by Industries

The total number of fatalities recorded for the year was 972, being classified under the various groups of industries as follows: transportation and public utilities, 180, or 18.52 per cent of the total; mining, non-ferrous smelting and quarrying, 170, 17.49 per cent; manufacturing, 123, or 12.65 per cent; agriculture, 122, or 12.55 per cent; logging, 114, or 11.73 per cent; construction, 97, or 9.98 per cent; service, 65, or 6.69 per cent; trade, 39, or 4.01 per cent; fishing and trapping, 37, or 3.81 per cent; electric light and power, 24, or 2.47 per cent; finance, 1, or .10 per cent.

The table of fatalities by months shows the highest point to have been reached in July, with 100 being recorded in this month, with 94 in October, 91 in November and 83 in August. The low point for the year, 69, was reached in May. The table gives the num-

ber of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance and service, etc., the figures were those of the decennial census of 1931, for manufacturing, from the annual census of industry for 1933, for mining, fishing, electric light and power, steam railways, street and electric railways, telegraphs and telephones, and express, from the annual census of industry for 1934.

Prior to 1932 figures had been included showing for each industry the accident frequency, that is the number of fatalities per 1,000 persons employed. While the figures as to the numbers employed were not in any instance those for the year under review, it was considered that they afforded a reasonably accurate estimate for this purpose, namely, to show the accident ratio in each industry as compared with the others. In the case of 1932, 1933, 1934 and 1935, however, the difference in numbers employed has been so marked that figures for earlier years, though the latest available, do not afford even approximate estimates and frequency rates based on them would be misleading and are therefore not given. The latest figures available as to numbers employed, however, are included for general comparative purposes.

### Fatal and Non-fatal Accidents in Canada recorded by Provincial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the records of the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, and steam and electric railway operation accidents are dealt with by various governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation Boards for 1934 were summarized in the following issues: New Brunswick and Saskatchewan, April, 1935, pages 335-336; Nova Scotia, May, 1935, page 429, Alberta, Manitoba and Ontario, June, 1935, pages 537-541; British Columbia, August, 1935, pages 738-739; Quebec, November, 1935, pages 1008-1009.

None of the provinces have jurisdiction over all industries, so that the accidents recorded are

those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by the several Workmen's Compensation Boards for 1929, 1930, 1931, 1932, 1933, 1934 and also gives some preliminary figures for 1935. It may be observed that the Department of Labour's figures show 1,000 fatal industrial accidents as occurring during 1934, while the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year was 584, these figures including none for Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not include accidents in all industries. In addition, however, the Boards' records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some Boards.

(b) The province of New Brunswick Board reports 1,774 minor accidents in 1929, 1,583 in 1930, and 442 in 1931, involving no compensation or medical aid.

(c) Saskatchewan from July 1, 1930.

(d) Cases of "medical aid only" included only after Sept. 1, 1931.

(e) Preliminary figures.

## NATIONAL EMPLOYMENT COMMISSION

### Legislation Introduced Provides for Co-operative Measures to promote Employment—National Registration and Classification of Unemployed—Special Committees for Employment of Women and Youth

IN accordance with a recommendation of the Dominion-Provincial Conference of last December, Hon. Norman McL. Rogers, Minister of Labour, introduced a Bill in the House of Commons on March 19, providing for the establishment of a National Employment Commission. A resolution on which the proposed legislation is based was adopted and the Bill was given its first reading.

In moving consideration of the resolution to introduce the measure, the Hon. Mr. Rogers stated:—

"As the resolution indicates, the purpose of the legislation which is to follow is to create an agency which will facilitate co-operation between the federal government, provincial governments, municipalities, industrial corporations, labour organizations and social welfare agencies in dealing constructively with the problem of unemployment and relief. It is recognized that unemployment is a matter of national concern and calls for an organized national effort. It is the opinion of the government that such effort can be most effectively made through the advice and assistance of a national commission. Provision will also be made for the appointment of a national advisory committee, including representatives of industrial, occupational and social welfare organizations. It may also be appropriate to observe that at the dominion-provincial conference held last December the proposal to establish a national commission on unemployment and relief received the unanimous approval of the provincial delegations. . . ."

The Minister also expressed the government's concern to expedite this legislation.

Urging the necessity for the establishment of such a body, the Prime Minister, the Right Hon. W. L. Mackenzie King, observed that "the late government tried to deal with unemployment. . . . through the agency of the Department of Labour and the minister at its head. In each of five consecutive years they found that they could not by that means obtain satisfactory results. Obviously it cannot be done, because the Department of Labour like other government departments is formed to carry on the business of normal times, not to deal with such abnormal and exceptional conditions as the unemployment problem in Canada has presented. . . ."

The Bill (No. 14) as introduced, provides for the establishment of a National Employ-

ment Commission of seven members including a chairman and vice-chairman, who are to "be paid such fees or compensation for their services as the Governor in Council may from time to time determine as well as actual travelling and living expenses." Provision is also made for a secretary and "such other employees as may be necessary for the proper conduct of the business of the Commission."

In its preamble, the Bill declares that "unemployment has been for several years Canada's most urgent national problem, and until such time as the normal revival of trade and industry will absorb a large percentage of unemployed workers, it is essential that steps be taken to find ways and means of providing remunerative employment, thus reducing the numbers at present on relief, and lessening the burden of taxation." Continuing, the preamble adds that "to achieve a nation-wide co-operative effort in reducing the numbers on relief and in providing employment, it is necessary to have the effective co-operation of the provinces and municipalities, and to enlist the co-operation of employers' and employees' associations throughout the Dominion, as well as of such other public and private agencies as may be in a position to provide employment or to suggest what is practicable in the way of re-employment projects."

"It would appear," the preamble concludes, "that such nation-wide co-operative effort can best be effected through the appointment of a representative national commission, with power to co-operate with the provinces, municipalities and other agencies in the administration of unemployment relief, and in an endeavour to provide work for the unemployed."

#### Powers and Duties

The powers and duties of the Commission are set forth in sections 6, 7, 8, 9, 10, 11, and 12, as follows:—

6. The Commission shall,
  - (a) carry out as soon as possible a national registration and classification of persons on relief in co-operation with the provinces, municipalities and private and public bodies;
  - (b) recommend to the Minister conditions to be complied with by any province obtaining grants for relief purposes from the Government of Canada;

- (c) recommend to the Minister effective means of mobilizing the agencies for relief both state and voluntary, and so co-ordinating their work as to avoid overlapping and abuses, and to secure a proper provision and auditing of expenditures of all moneys;
  - (d) investigate and report upon proposals for the carrying out of programs of public works and other projects to aid in providing employment;
  - (e) recommend to the Minister measures with respect to programs of public works and projects of the Dominion, the provinces, the municipalities, and other agencies, intended to aid in providing employment in a manner which will serve to mobilize and co-ordinate their activities;
  - (f) investigate and report to the Minister on measures of co-operation with commercial and industrial groups in devising means under which provision may be made for the maintenance and increase of employment;
  - (g) investigate and report to the Minister upon plans for the establishment of an apprenticeship system in industry;
  - (h) to investigate and report upon ways and means of providing employment for disabled persons, and to co-operate with the Veterans' Assistance Commission in its efforts to secure suitable employment for ex-soldiers.
  - (i) recommend to the Minister comprehensive measures constituting a long-range plan of national development which may be proceeded with or discontinued from time to time as conditions may determine;
  - (j) to take such steps with the approval of the Minister to ensure such publicity as in the opinion of the Commission may be necessary to enable it effectively to discharge its powers and duties.
7. The Commission shall, under the direction of the Minister supervise the expenditure of funds voted by Parliament for purposes of relief and providing employment, and perform such administrative duties with respect to relief and employment as may be assigned to it from time to time by the Governor in Council.

#### *National Advisory Committee*

8. (1) The Governor in Council may with a view to more effectively enabling the Commission to carry out its functions name a "National Advisory Committee" hereinafter referred to as "the Committee" to include representatives of industrial, occupational,

philanthropic, and social service organizations.

(2) No fees or emoluments of any kind shall be payable to, or received by, any member of the Committee in connection with services rendered as such member, but the said members shall be paid travelling expenses and living allowances necessarily incurred in connection with the business of the Commission.

#### *Women's and Youth Employment Committees*

9. (1) The Minister may appoint, from among the members of the Committee, a special Committee to be designated as the "Women's Employment Committee" to investigate and report upon measures and means to aid unemployed women to secure employment in industry and commerce.

(2) The Minister may appoint from among the members of the Advisory Committee a special committee to be designated as the "Youth Employment Committee" which will report upon measures and means in respect to the employment of youth.

(3) The Commission with the approval of the Minister may appoint honorary local advisory committees composed of persons resident in any locality willing to aid the Commission in carrying out its duties.

10. The Governor in Council may from time to time make such orders and regulations as may be necessary to carry out the provisions of this Act.

11. Any report, recommendation or submission required by the Commission or any of its committees may be made available for distribution in such quantities and on such terms as the Minister may determine.

12. All Orders-in-Council and regulations made under the provisions of this Act shall be laid before the House of Commons forthwith after the making thereof if Parliament is then sitting, and if not, then such Orders-in-Council and regulations, or an abstract thereof, disclosing their essential provisions, shall be published in the next issue of the *Canada Gazette*.

#### **Unemployment Relief**

The following notice of motion was given by Hon. Norman McL. Rogers, Minister of Labour, in the House of Commons on March 19:—

"That it is expedient to bring in a measure respecting relief for the unemployment and assistance for agricultural settlement and rehabilitation and development of natural and other resources, and to provide for such payments out of the consolidated revenue fund as may be necessary for all or any of the purposes of the proposed legislation."

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Liability of Contractor and Workman for Damages by Fire

In the course of repairing a building in Montreal, a workman employed by a contractor utilized an acetylene blow-torch to cut through a steel rod or bolt, situated close to the ceiling. Shortly after the workman had finished this operation a fire broke out in the structure of the ceiling beyond the point at which the workman had used the blow torch. Action was instituted in the Superior Court by a fire insurance company against the contractor and the workman concerned (the defendants) in reimbursement of the loss paid to the insured owner.

In the judgment of the court it was held that: "Where a workman in the employ of a contractor is engaged in cutting a steel rod with

an acetylene blow torch and it appears from the evidence that it is a usual precaution in doing such work to make use of a metal shield beyond the metal being cut, which precaution the workman neglected to take, the presumption arising from these facts if a fire breaks out shortly afterwards is inescapable that the fire was set by the blow torch. The contractor and the workman are liable in damages towards an Insurance company, which, after having paid the insured, had been subrogated in his rights."

Damages were awarded to the plaintiffs for \$1,956.

*Royal Insurance Company, Limited, v. Canadian Structural Steel Works Company Limited and another* (1936) 74, *Rapports Judiciaires de Québec, Cour Supérieure*, 8.

### Workmen's Compensation in Great Britain

The Home Office report on Workmen's Compensation in Great Britain during the year 1934 estimates the total cost to industry under the various acts at "something under £11 millions." It is explained that only an approximate estimate can be attempted because of incomplete information, and that the above estimate includes not only compensation paid but also the working expenses of insurance companies, mutual indemnity associations, legal and medical charges, etc.

The total amount of compensation paid in the seven industries covered—shipping, factories, railways, docks, mines, quarries and construction—was £5,774,538. Collective returns covered 139,482 employers and accounted for 77.3 per cent of the cases compensated and the compensation paid. There were 7,050,177 persons employed in these seven industries.

Of this sum £2,215,281, or 38.4 per cent was paid by the mutual indemnity associations in the capacity of insurers; £1,265,206, or 21.9 per cent., was paid by the insurance companies; and £2,294,051, or 39.7 per cent., was paid by employers—either directly or through the agency of mutual indemnity associations—in respect of liabilities not covered by insurance. The sum of £658,732 was paid in compensation in respect of 2,229 fatal accidents and £5,774,538 in respect of 401,459 non-fatal accidents. The average amount of compensation was £291 in cases of death and £12 15s. in cases of disablement (including cases settled by payment of a lump sum).

The amount of compensation paid during the year per person employed in each of the seven industries was as follows:—Shipping,

31s. 2d.; factories, 7s. 10d.; docks, 48s. 11d.; mines, 67s. 10d.; quarries, 27s. 10d.; constructional work, 22s. 6d.; and railways, 11s. 6d. The corresponding figure for all seven industries was 16s. 5d. In the coal-mining industry the compensation paid amounted to 2.8d. per ton of coal raised; in the railway services it was nine-tenths of a penny for each £1 paid in wages.

There were 382,966 cases of disablement arising from accident, 331,029 being new cases and 51,937 cases continued from previous years. At the end of the year 52,067 cases were outstanding, including 25,131 cases which had lasted one year or more, and 7,001 (of which 5,664 were in the mining industry) which had lasted 10 years or over. Of every 100 cases of disablement arising from accident which were terminated during the year, 3.67 had lasted for 26 weeks or more, while the corresponding figure for cases of disease was 24.52.

The number of disease disablement cases was 18,493, including 10,153 new cases and 8,340 cases continued from previous years. At the end of the year 7,482 cases were outstanding and 11,011 had terminated. The outstanding cases included 5,353 which had lasted one year or more and 748 (of which 725 were in the mining industry) which had lasted 10 years or over. As in previous years the bulk of the disablement cases occurred in the mining industry. The majority were due to miner's nystagmus, beat hand and beat knee. There were 1,745 new cases and 7,174 continued cases of miner's nystagmus. Cases of disablement due to dermatitis have increased from 270 in 1919 to 2,566 in 1934.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**MPROVEMENT was recorded in employment at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 9,411 employers of labour, each with a minimum of fifteen employees, and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 931,959 persons, as compared with 926,888 in the preceding month. This increase was slightly smaller than the average gain recorded in the fifteen preceding years for which statistics are available. Unfavourable weather conditions in some localities and industries continued adversely to affect the situation. The index number (based on the 1926 average as 100) stood at 98·9, as compared with 98·4 in the preceding month, while at March 1 in the last fifteen years it was as follows:—1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4; 1928, 102·6; 1927, 97·5; 1926, 92·6; 1925, 88·1; 1924, 91·8; 1923, 91·0; 1922, 82·9 and 1921, 89·1.

At the beginning of March, 1936, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada stood at 13·8, as compared with 14·8 per cent at the beginning of February, 1936, and 18·2 per cent at the beginning of March, 1935. The percentage for March was based on the returns compiled from 1,763 labour organizations, with a total of 168,853 members.

Reports received from the offices of the Employment Service of Canada indicated declines during February, 1936, in the average daily placements in employment as compared with those of the preceding month, and also with February last year, the major change in the first comparison taking place in farming and in the second in construction and maintenance. Vacancies in February, 1936, numbered, 24,983, applications, 49,618 and placements in regular and casual employment, 23,687.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting,

and rent at the beginning of March, 1936, was \$16.63 as compared with \$16.58 for February. The cost of foods was slightly higher, while fuel and rent were practically unchanged. Comparative figures for certain earlier dates are \$16.10 for March, 1935; \$15.41 for June, 1933 (the low point in recent years); \$21.96 for March, 1930; \$20.96 for March, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.35 for March, 1914. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined during March, being 72·2 for the week ended March 27, as compared with 72·6 for the week ended March 6, and 72·5 for the week ended February 28. On a monthly basis this index number was 72·5 for February, 1936; 72·0 for March, 1935; 63·5 for February, 1933 (the low point in recent years); 91·8 for March, 1930, and 101·3 for March, 1926.

The latest statistics available reflecting industrial conditions in Canada are given in a table on page 304. The index of the physical volume of business in February, 1936, was slightly lower than in January but more than 4 per cent higher than in February, 1935. In the former comparison the construction group was much lower, while there was a small decrease in the output of electric power. The index of mineral production was much higher than in January, due in large part to the increased shipments of copper, nickel, gold and silver and the greater production of coal. Important increases occurred also in the figures for distribution, exports being substantially higher, with smaller advances in imports, trade employment and carloadings. The index for manufacturing was little changed. Comparing February, 1936, with February, 1935, all of the principal groups show advance except construction which was considerably lower. Information available for March shows employment, contracts awarded and carloadings somewhat higher than in February and higher also than in March, 1935.

The number of strikes and lockouts on record during March was twelve, involving 1,274 workers and causing a time loss of 12,265 man working days as against six dis-

\*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

†For the week ended March 27.

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending March 28, 1936 and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending March 21, February 22 and January 25, 1936, March 23, February 23 and January 26, 1935. (7) MacLean's Building Review.

putes during February which involved 2,902 workers and caused time loss of 18,987 days. In March last year the number of disputes was thirteen, involving 3,303 workers with a time loss of 12,844 days. Four strikes in logging, two in Vancouver Island, B.C., and two in Ontario, with two strikes of shoe and leather workers in London and Toronto accounted for most of the workers involved and for nearly all of the time loss. Of the twelve disputes in March, five were recorded as terminated, one resulting in favour of the employer affected, two in favour of the workers involved, while a compromise settlement was reached in one case. Seven disputes were recorded as unterminated at the end of the month and involved approximately 1,000 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Employment and relief program of Dominion Government**

Closely following this issue of the LABOUR GAZETTE there is published a supplement dealing comprehensively with the Dominion Government's program respecting re-employment, unemployment and relief.

Every factor in the complex problem is reviewed, and the tabular statistics, based largely on the results of the recently initiated re-classification of direct relief recipients, indicate the composition of the relief situation in the Dominion.

Included is the summarized speech in the House of Commons of the Minister of Labour, followed by that of the Prime Minister, both of which give a penetrating analysis of the situation and the measures underway to cope with it by co-ordinated effort.

#### **Industrial Disputes Investigation Act**

During the past month, the Department received the report of the Board of Conciliation and investigation established in connection with a dispute between the Hamilton Street Railway Company and its employees. Two applications for the establishment of a Board were also received from: (1) Employees of the city of Edmonton; and (2) pursers and steward staffs of the Canadian National Steamships on the Pacific coast.

#### **Mr. Humphrey Mitchell appointed Director of Labour Transference**

Mr. Humphrey Mitchell, of Hamilton, has been appointed Director of Labour Transference, charged with the responsibility of demobilizing the relief camps in conformity with the policy of the Government, which has for its purpose, the closing of the camps by July 1, 1936.

Mr. Mitchell has been for many years prominently identified with the labour movement in Canada. Formerly president of the Hamilton Trades and Labour Council, he also served as its secretary for twenty-two consecutive terms. The Trades and Labour Congress of Canada selected him as its representative to the convention of the British Trades Union Congress in 1933, and in the same year he also represented the Canadian body at the Brussell's convention of the International Federation of Trade Unions. In 1931 he was elected to the House of Commons as member for Hamilton East. In addition to his labour and parliamentary career, Mr. Mitchell has a creditable record of war service in the navy. Prior to his appointment as Director of Labour Transference, he was a member of the special committee which investigated relief camps in Canada.

#### **Legislative program in Quebec**

The Speech from the Throne, opening the Quebec Legislature on March 24, presaged a fairly extensive program.

In regard to relief matters, it was declared that "if the time has not yet come to put an end to the direct relief system, the Government will make every sacrifice consistent with the Provincial finances, in order to provide employment for all who ask and are willing to work."

Emphasizing the plight of unemployed youth, the Speech announced the intended establishment of a bureau to assist young men in contacting employment opportunities.

Legislation enabling the province to participate in the federal old age pension system was also forecast.

Reference was made to the assistance provided by the Department of Colonization and Diocesan Societies in placing thousands of settlers in colonization centres. It was stated that this Back-to-the-Land movement would be developed as much as possible.

With regard to the Collective Contract System, "approved by the highest civil and religious authorities of the province," it was noted that the movement had developed extensively. Contracts in force numbered 65, with "the consequent rise in salaries amounting

to over eight million dollars." It was estimated that 135,000 workmen had benefited by this enactment. Caution was urged, however, "because the State cannot overstep certain limits."

The progress and future development of rural electrification was also dealt with.

#### **Special Committee reports on compensation in Manitoba**

The special committee appointed by the Manitoba Legislature to survey the field of workmen's compensation in the province has made its report in which it declares that the "Workmen's Compensation Act as it now stands and the manner in which it has been and is being administered has proved and is proving to be highly satisfactory both to employers and employees."

As indicated in the LABOUR GAZETTE for May, 1935, page 420, the personnel of this Committee comprised five representatives each of employees, employers and the Legislature.

In addition to expressing satisfaction with the administration of the Act, the Committee concluded that it would not be in the interests of either employers or employees or in the public interests to suggest any changes in the said Act other than those hereinafter outlined.

Among the amendments recommended by the Committee were: (1) the inclusion of silicosis as compensable disease when contracted by workmen employed in mining, and iron, steel or metal foundries; (2) the non-withdrawal of an industry from the scope of Part One of the Act except with the consent of the Board, and the exclusion from Part One of any industry failing to pay its assessments or from which the Board is unable to collect assessment; (3) exclusion from the Act of employers having only few employees; (4) authorizing the Workmen's Compensation Board to establish superannuation allowances for its employees on a joint contributory basis.

A minority report was submitted by one member of the employees section of the committee. His recommendations included payment of 100 per cent compensation to injured workers on the basis of earnings at the time of the accident; the addition of dermatitis and cyanide poisoning as compensable; and the provision of a full-time board of three members.

#### **Minimum wages in Manitoba.**

In pursuance of an amendment made in 1935 to the Manitoba Minimum Wage Act, certain orders of the Board have been reviewed and re-issued. The 1935 amendment provides that the Minimum Wage Board may recom-

mend to the Lieutenant-Governor in Council that a proposed order or an order of the Board which is already effective in cities may be extended to other parts of the province and that an order applying to persons employed in mail-order houses, shops, factories and places of amusement may be extended to employees in any trades, industries, businesses or callings. The Lieutenant-Governor in Council was given power to act on such recommendations. Accordingly, Regulation No. 17 of the Minimum Wage Board, dated December 24, 1934, which applied to all employees 18 years of age or over in all portions of the province in occupations not covered by any other regulation of the Board and not specifically excepted, has been repealed and a new Regulation 17 applying to all parts of the province was approved by order in council on March 12, 1936, and published in The Manitoba Gazette of March 21, 1936. Like the former Regulation 17, which was published in THE LABOUR GAZETTE in January, 1935, p. 27, it governs the employment of "general employees, 18 years of age or over, in occupations not otherwise regulated and not specifically excepted, in all portions of the Province of Manitoba." The same minimum rates of wages and other conditions of employment are established as in the Regulation of December 24, 1934.

Similarly, in order to conform to the procedure laid down in the 1935 amendments to the Act, the Manitoba Minimum Wage Board has re-issued Order No. 18 "governing the employment of men performing work generally done by boys, persons on part-time and piece-work and apprentices." The new Order, which appears in The Manitoba Gazette of March 14, 1936, and which relates only to persons employed in cities, is to become effective on April 15, 1936, but it applies to all orders of the Minimum Wage Board made prior to that date. The terms of the Order are identical with those of Order No. 18 published in The Manitoba Gazette of March 2, 1935, and in THE LABOUR GAZETTE, April, 1935, p. 332.

#### **Retail code in Alberta.**

Under the provisions of the Trade and Industry Act of Alberta, a "code of fair competition and business practice for the retail trade" has been made operative throughout the province, effective from April 6, by an Order in Council recently issued. Applicable to all classes of retail trade within the province, it is estimated that this "master code," the first of its kind in Canada, will govern the operations of approximately 8,000 retail merchants in Alberta.

The chief objectives of the code as explained by Hon. E. C. Manning, provincial secretary and Minister of Trade and Industry, under whose jurisdiction the Act is administered, is to establish business operations "fair and alike to buyer and seller." It is designed also to prevent exploitation by unethical practices and misleading advertising. There are sections providing for the fixing of minimum and maximum prices but it is expected that this authorization will only be invoked as far as necessary to correct any abuses.

A more detailed review of the code will appear in the next issue of the LABOUR GAZETTE.

### State Health Insurance in British Columbia.

British Columbia's "state health insurance" Bill received its second reading in the provincial legislature on March 26 by a vote of 28 to 10. (The history of this measure prior to its submission to the Legislature was reviewed in the LABOUR GAZETTE for February, page 151).

Approximately 300,000 people of the province will be eligible for the protection afforded in the legislation. Its provisions will apply compulsorily to wage earners receiving less than \$1,800 per year, except farm workers. These, together with merchants, independent producers, and other non wage-earners, may participate optionally at somewhat higher individual rates.

Each employee under the plan is assessed at 2 per cent of his salary with a maximum limit of 70 cents per week, while each employer is to contribute 1 per cent of his payroll—not less than 20 cents or more than 35 cents per week—for each employee insured.

"Mandatory benefits" include medical care by the physician or surgeon selected by the insured; free hospitalization; free diagnostic and laboratory service; and maternity cash benefit of \$20 for women who do not go to hospital.

The family is dealt with as a unit, including dependent wives and children with the wage earner, as insured persons.

### Unemployment Fund in Great Britain.

A distinctly more favourable balance sheet than for some years past in regard to the Unemployment Fund (Great Britain) was indicated in the report of the Unemployment Insurance Statutory Committee for the calendar year 1935. As explained in *The Economist* of March 7, the Statutory Committee are required to furnish, not later than the end of February each year, a report on the financial condition of the Insurance Fund on December 31 of the preceding year. If

the Fund is in danger of becoming insolvent, or if it is accumulating more money than is "reasonably sufficient to discharge its liabilities," they are required to recommend such changes in the rates of contribution, or in the rates of conditions of benefit, as, in their opinion, are required to make the Fund sufficient, and not more than "reasonably sufficient, to discharge its liabilities."

The financial statement showed a surplus for the year's operation of something over £10,000,000 and it was estimated that there would be a "disposable surplus" of approximately £6,500,000 per annum over the next eight years. The method by which the Committee worked out its estimate of a balanced Fund over a specific trade cycle is related in the following paragraphs from *The Ministry of Labour Gazette*.

The Statutory Committee adopt the view that in principle the Unemployment Fund should balance over a trade cycle, and they have taken a period of eight years, beginning with 1936, as the length of the next cycle. They assume that beyond this the general trend of unemployment is likely to be downwards.

On the advice of the Committee on Economic Information the Statutory Committee have prepared estimates of the prospects of the Unemployment Fund based on applying the adjusted experience of 1935 to assumed percentages of unemployment, over the next trade cycle, of 16.75 and 16.25 respectively. In connection with both these percentages they have assumed that, under the conditions of the scheme, 48 per cent on the average, of the total unemployment will rank for benefit. On the assumption of an average of 16.75 per cent of unemployment the Committee conclude that, with the present rates of contributions and benefit, and present conditions for the receipt of benefit, the contribution income of the Fund would exceed the expenditure by £3,588,000 a year; while, on the basis of 16.25 per cent of unemployment, the excess is £5,538,000 per year.

The Committee take the view that, if the scheme had no accumulated reserve, they would be compelled to base their estimate of the future prospects of the Fund on the higher of these two rates of unemployment. In fact, however, the Fund began the year 1936 with an accumulated reserve of nearly £21,500,000, and as, in the Committee's opinion, unemployment in the depressed staple industries should gradually diminish, they take the view that the rate of unemployment in the eight years following the next cycle should be materially less than 16.75 per cent.

Having regard to these considerations the Committee put the disposable surplus of the Fund now at nearly £6,500,000 a year. If the income of the Fund is reduced or the expenditure is increased by approximately that amount, then, on the assumption of 16·75 per cent of unemployment during the next eight years, nearly the whole of the accumulative reserve will be used up, and the Fund will continue to balance if unemployment thereafter is 16 per cent or less. These estimates are subject to various conditions, to which the Committee call attention.

To utilize this £6,500,000 in compliance with the purpose of the Fund, the Committee sets forth the arguments that can be advanced in favour of devoting the disposable surplus to reduction of contributions on the one hand or to increasing the rates of benefits on the other.

After weighing all the factors involved, the majority of the Committee recommended that the surplus should be used for reducing the weekly rates of contribution in the case of men and women, aged eighteen and over, by one penny for each party concerned—the employer, the employee and the State.

On this hypothesis, the Fund, it is estimated, should "balance out" over the eight years ending December 31, 1943.

#### **Annual Report of United States Secretary of Labour.**

The twenty-third annual report of the United States Secretary of Labour, covering the year closing June 30, 1935, constitutes a comprehensive review of the activities of the Department in

carrying out the basic obligations of the Act which established it, viz—to safeguard the rights and opportunities of the wage earners; to improve their working conditions and to advance their opportunity for profitable employment.

In prefacing her report, Miss Frances Perkins, the Secretary of Labour, summarizes the "desirable objectives" of the Department and the progress made toward their accomplishment, as follows:

1. Unemployment compensation. This has been accomplished in the Social Security Act.

2. Old-age security. This has been accomplished in the Social Security Act.

3. Boards for hearing locally and investigating and making findings on complaints of industrial practices and in cases of industrial disputes. This has been accomplished by the setting up of the National Labour Relations Board and its regional boards, through the designation of special boards in steel, textile, coal, and in the maritime and lumber indus-

tries and in the designation by the Secretary of Labour of boards to handle local disputes in different sections of the country.

4. Greater co-operation between the State and Federal labour departments. This has been greatly forwarded through regular national and regional conferences aimed to raise standards of labour legislation to a desirable common level so as to benefit the individual wage earner, employer, and investor, and ultimately to evolve a sound and unusual labour-law policy throughout the country by the historical method of State and Federal co-operation.

5. Development of the United States Employment Service in co-operation with the States. This has been largely accomplished with 40 States accepting the provisions of the Wagner-Peyser Act, which created the Service, and with 27 of them organizing employment services affiliated with the United States Employment Service.

Under respective headings, the report details the administrative activities of the Conciliation Service, the Employment Service, Division of Labour Standards, Bureau of Labour Statistics, Immigration and Naturalization Service, Children's Bureau, Women's Bureau, etc.

The Secretary also reviews the development of the national social-security program, the substantial progress of collective bargaining in the field of labour relations, State-Federal co-operation to raise labour-law standards, and labour legislation (Federal and State).

#### **United States Conciliation Service.**

In the annual report of the Secretary of Labour (United States) referred to elsewhere on this page, is included the report of the director of the Conciliation Service, outlining the operation of this branch during the fiscal year ended June 30, 1935. Within that period, the Conciliation Service utilized its good offices in 1,007 cases covering strikes, threatened strikes, lockouts, and jurisdictional disputes, involving directly and indirectly 785,077 wage earners.

Representatives of the Service were able to secure adjustments in 749 specific disputes and to have 80 cases referred to other Federal agencies for final disposition. Only 23 cases were pending at the end of the fiscal year, 76 were recorded under "unable to adjust", and in 79 cases the differences were settled before the arrival of a commissioner, the employees had returned to work, or the strike had been called off or otherwise disposed of. Of the 23 cases pending at the close of the fiscal year 17 have been adjusted.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

TWO applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

1. From employees of the Corporation of the City of Edmonton, being members of Division 569, Amalgamated Association of Street and Electric Railway Employees of America. The dispute, as described in the application, relates to (i) the proposal of the civic authorities to change the system of apportioning runs as between senior and junior employees; (ii) the request of the employees for payment of time and one-half for certain holidays, and (iii) the employees' request that the agreement be changed so as to provide that an employee reaching the age of 65 years need not retire if, in the opinion of the superintendent, such employee is capable of efficiently continuing his work. One hundred and forty-two employees are stated to be directly affected by the dispute, and 101 indirectly. As the statutory declaration attached to the application does not comply with the requirements of the Industrial Disputes Investigation Act, the applicants have been requested to satisfy the Minister that authority to declare a strike has been obtained from a majority of the employees affected in the manner prescribed by the Act.

2. From pursers' and stewards' staffs engaged on Canadian National Steamships in Pacific Coastal Service. One hundred and seventy-seven employees, members of the Canadian Brotherhood of Railroad Employees, are stated to be directly affected by the dispute, which grew out of the employees' request for increased wages and certain changes in working

conditions. It did not appear from the application that the proposals submitted by the employees had been the subject of direct negotiations between the management of the company and the employees' representatives. The Department, therefore, has communicated with the parties concerned indicating the desirability of their endeavouring to reach agreement on the points at issue through negotiations before consideration is given to the question of the establishment of a Board.

It was reported in the LABOUR GAZETTE for November, 1935 (page 978), that an application had been received from fifty employees of the Winnipeg Electric Company, being members of Locals 1037 and 435, International Brotherhood of Electrical Workers, in regard to their request for restoration of wage rates as provided in the agreement with the company dated March 31, 1933. It was decided to withhold consideration of the establishment of a Board in that case until the report was received from the Board of Conciliation and Investigation which, under the chairmanship of Mr. Robert Jacob, K.C., was dealing with a dispute between the same company and its substation operators and electrical workers. The recommendations of this Board, however, did not prove acceptable to the fifty employees being members of Locals 1037 and 435, International Brotherhood of Electrical Workers, who, on March 23, 1936, submitted a revised application. In the meantime the agreement under which the men had been working expired on January 31, 1936. The employees now desire to enter into a new agreement with the company providing cancellation of the wage reductions previously made. The revised application is receiving consideration.

### Report of Board in Dispute between Hamilton Street Railway Company and its Employees

The findings of the Board of Conciliation and Investigation which was established to deal with a dispute between the Hamilton Street Railway Company and certain of its employees being members of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America, were received in the Department of Labour during March and copies were transmitted to the parties respectively concerned. The dispute relates to the matter of wages and hours of labour and is said to affect approximately 300 employees. The street railway is operated

by the Hydro-Electric Power Commission of Ontario. The Board was composed as follows:—His Honour Judge G. F. Mahon, of Walkerville, Ontario, Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. John A. Munro, of Hamilton, and Fred Bancroft, of Oakville, nominees of the Commission and employees respectively.

The report of the Board, bearing the signatures of His Honour Judge Mahon and Mr. Bancroft, recommends an increase of 4 cents an hour to all employees concerned in

the dispute, with a 44 hour week for operators of one-man cars and buses instead of 40 hours as now prevailing. Mr. Munro in a Minority Report opposes any increase in wage rates but concurs in the Board's recommendation regarding the hours of work.

Both the Report of the Board and the Minority Report are accompanied by a copy of a draft agreement proposed by the employees. However, only those clauses of the proposed agreement which were in dispute are quoted herewith.

### Report of Board

Hamilton, Ontario, March 16th, 1936.

Honourable Norman McL. Rogers,  
Minister of Labour,  
Ottawa, Ontario.

Dear Sir, Re: *The Dispute between the Hamilton Street Railway Company and its Employees.*

The Board of Conciliation and Investigation, appointed by you under the provisions of the Industrial Disputes Investigation Act, Revised Statutes of Canada, Chapter 112, and amendments thereto, to inquire into the dispute between the Hamilton Street Railway Company and its employees, arising out of a request for the payment of higher wages than now are and for some time past been received, begs leave to report, advise and recommend as hereinafter set forth.

The Board assembled in Hamilton on the morning of the 27th day of February, last past, and proceeded, after first taking their oath of office to familiarize themselves from the documents received from the Registrar, under the Act, with the nature of the dispute, the limitation of its duties, and the method to be employed to have each of the parties concerned present its case to the Board.

On the following day, after due notice to all parties concerned, representatives of both parties appeared before the Board, and each named its three representatives. Those named by the Railway Company were:—George E. Waller, the Railway Company's General Manager, J. L. Clifford, Operating Engineer, H. E. Minden; and by the Employees: Magnus Sinclair, General Executive Board Member of the International Union of the Amalgamated Association of Street and Electric Railway Employees of America, Patterson Cheatley, President of the Local Union, and E. A. Payne, Executive Board Member of the Local Union, the last three all representing Division Number 107 of the aforesaid Union at Hamilton, Ontario.

Meetings of the Board were held on each of the following dates, namely, February 27,

28, and 29, 1936, and on March 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13 and 14, 1936.

At all these meetings, all the members of the Board were present, with the exception of John A. Munro, who was absent one day, at his request.

At the meetings upon the 28th and 29th of February, the time was devoted to informal statements by both parties of the nature of the dispute, its limitations and the history of events leading up to the appointment of the Board.

On the second day of March, inst., the Board proceeded to hear the formal presentation of the case of each. A number of days were occupied in such presentation, and, in addition, a great mass of documentary statements were presented for the consideration of the Board, all dealing with matters calculated to support the stand taken by the party presenting the same, and thought to aid the Board to a proper appreciation of the situation, either for the purpose of conciliation and for making its report and award in the event of the failure of conciliation. Many of these were of figures of a comparative nature.

This presentation took a number of days, and, at the conclusion, the Board requested the parties to get together and reconcile their differences. This was done, and the Board, for a time, assisting in the conferences, had strong reasons for expecting that a settlement would be reached, but, in the end, after repeated conferences between the representatives of the parties and the Board, settlement was found impossible, and nothing remained but for the Board to proceed to study the facts and to make its recommendation, and the remaining meetings of the Board were employed for that purpose. Strong and repeated efforts were made to have a unanimous decision reached between the members of the Board, and report made, but that, too, was found impossible, as the absence of a signature of a member of the Board to this report attests.

The disputes between the parties were those set forth in the application for the appointment of a Board, and in a general way are two in number.

The first: Shall the Employees have a general increase in wages, and, if so, how much?

The second: Shall the working hours of the operators (those men who operate one-man cars and buses) be the present practice of five days a week, of eight hours each day—a total of forty hours each week—or shall the total hours of work per week be forty-four?

All other matters pertaining to and concerning the relationship between Employer

and Employees, and usually expressed in a written agreement, are settled between the parties.

When it came to deal with the questions for the Board, expressed in a general way as above set forth, a draft of the proposed agreement in writing was produced. This, in the main, follows an agreement in writing between the parties, dated the first day of May, 1928, under which the parties have been carrying on, subject, however, to certain departures and alterations made from time to time since.

There were a number of clauses therein which, in some way, affected the questions of wages and hours of employment, and which were not in dispute, and the parties were asked to take this draft agreement and go over same, clause by clause, and indicate to the Board the clauses agreed upon and those in dispute. That was done, and a copy of this agreement, as subsequently revised, is, for the purpose of reference, attached hereto, and marked as Exhibit "A."

All clauses therein were approved and conceded as satisfactory for the proposed new agreement, except the following, upon which the parties could not agree, and all of which fall within the ambit of the disputed questions with which this Board is empowered to deal, namely:

Section 2: The wages of operators of cars and busses in the service.

Section 3: (a) and (b). Being hours of labour and overtime rates for operators.

Section 6: Extra pay for operators working snow ploughs, sweepers and sand cars.

Section 7: Extra pay for operators training students to become operators.

Section 9: (d) Pay for reporting time for operators in the service.

Section 18: The hourly rate of wages for various classes of Shopmen in the car houses and shops.

Section 19: The hours and monthly wages of Ticket Clerks.

Section 23: Relates to the length of the agreement, and as to its retroactive features.

A review of the outstanding facts pertaining to the operation of the Street Railway in Hamilton for a few years back, and the difficulties which beset it, and the means taken to meet those difficulties, and the part the employees played, and the sacrifices made to assist the Company in the overcoming of those difficulties, necessarily finds a place in this report, that the background of the dispute may the more readily be understood.

The principal difficulties with which the Railway Company have had to contend arise, for the most part, from falling revenues, due

to the business depression, and, for a time, to the competition of taxi cabs, usually referred to as "jitneys." For a time, there was a serious reduction of employment in the city: there were less workmen using the cars to go to and from work: less general use of the cars by the people, and then a fleet of "jitneys" commenced operations, and the revenues of the Railway continued to drop and grow less and less, until it seemed that the Railway Company might have to discontinue its operation. Strenuous measures were then undertaken by the Railway Company, with its employees at all times fully in co-operation, in an attempt to bring about a more favourable condition of affairs, some of which may be mentioned, viz:

1. A reduction of the Railway Company's annual financial obligation to the City of Hamilton.
2. To remove the competition of the jitneys.
3. The operation of the street cars by one man, instead of two, thus reducing the number of employees.
4. The reduction of the wages of the employees.

In order to get a reduction of the annual obligations to the City, a five cent street car fare was made a condition, which is the fare to-day. How serious was the decline in savings of the Railway is shown in a statement filed, and, as far as the Board knows, is not disputed. This shows that the gross income from the years 1930 to 1935, both inclusive, was as follows:—

1930.....	\$1,541,128 00
1931.....	1,354,912 00
1932.....	1,130,555 00
1933.....	814,335 00
1934.....	819,280 00
1935.....	920,402 00

In the same period, the operating costs declined from a total in 1930 of \$1,161,822 to \$746,337 in 1935. The net revenue over the same period was as follows:—

1930.....	\$379,306 00
1931.....	329,895 00
1932.....	235,455 00
1933.....	84,069 00
1934.....	83,873 00
1935.....	174,065 00

Here is shown a sharp increase in net revenue, during the past year. The figures for 1934 were \$83,873, and for 1935, \$174,065.

This same statement shows the taxes to have dropped from a total in the year 1930 of \$93,625, to a total in the year 1935 of \$32,714.

The total amount of interest per year which the Railway Company is charged by its owners in a set-up of what is equivalent to a bonded indebtedness has dropped from a

total in the year 1933 of \$164,220 to a total in the year 1935 of \$138,747, a considerable decrease for so short a time, no doubt due to a lowering of the rate of interest, which the owners of the road have been able to accomplish.

The same exhibit shows what the surplus and deficits have been over the same period of years, and they are as follows:—

1930.. .. .	\$140,324 00	Surplus
1931.. .. .	103,435 00	Surplus
1932.. .. .	21,930 00	Surplus
1933.. .. .	136,912 00	Deficit
1934.. .. .	131,177 00	Deficit
1935.. .. .	2,605 00	Surplus

This shows that the lowest depth was reached in the year 1933, and that a deficit of \$136,912 in 1933 has been wiped out in two years, and a surplus of \$2,605 was obtained in the past year.

The picture thus presented is one of rapid recovery, in spite of a reduction in street car fare to five cents.

The Employees point out to this Board the part they played, and the sacrifices they made in meeting the financial emergencies that arose through the depression and the taxi competition, and their co-operation in bringing about a reduction of the yearly financial obligation of the Company to the City.

A summary of reductions in earnings that the Employees have had are as follows:—

#### *Employees' reduction in 1931:*

1. Gave up time and one-half for overtime,
2. Seven cents per hour extra for Sunday work,
3. Ten minutes reporting time,
4. Time and one-half for all legal holidays, and which they say amounted to a reduction in earnings per man, per year, of \$79.56. This was for a term of one year, to save a lay-off of men, but which still obtains.

#### *Employees' reduction in 1932:*

The operators of cars took a three cent reduction in their hourly rate of pay—from 52 cents to 49 cents—for two-man cars, with five cents extra for one-man operated cars and bus operators, which, it was claimed, amounted to \$84.24 per man, per year.

#### *Employees' reduction in 1933:*

In January, 1933, the operators of cars and busses, at the Manager's request, reduced their hours of work per week from fifty-four to forty hours, to save a lay-off of men. This was the time when the order went through for the entire operation of cars by one man. This was a reduction of hours of service per man of fourteen hours per week, and amounted to \$7.56 per week, per man, or for a year, per man, of: \$393.12, a total reduction in earnings per man, per year, of approximately \$556.92.

At present, third year operators of one-man cars and busses earn in one year, approximately \$1,123.20.

The Employees ask for a third year operator of one-man cars and busses an increase of 11 cents per hour, or 65 cents per hour, and, on a forty hour week basis, and for first year men, 59 cents per hour, and second year men 62 cents per hour, and on a forty-hour week.

Barn, Shopmen, Trackmen, Electricians, etc., are on different rates. They aver that they took reductions in hours from fifty-five hours to a forty-eight hour week, or seven hours per week. And, in 1932, they took a three cent reduction per hour, amounting to per man, per year: \$74.88. They now ask an increase of .06½ cents per hour.

The Railway representatives, in answer to the request of the Employees for the increase above referred to, raise these objections:

1. They point out the small surplus which the Company saved in 1935, ending October 31, of something slightly in excess of \$2,600; of the expenditures that are absolutely necessary this year, of renewing something like a mile and a half of track on Barton Street, at an estimated cost of \$150,000, and of the necessity of purchasing some ten motor busses, at a cost of forty to fifty thousand dollars—and no surplus is laid by out of which this capital expenditure can be made, and that the interest increase on this capital expenditure will amount to approximately \$15,000 yearly, and, as far as the rebuilt track-age is concerned, without increasing the revenue of the Company.

2. That it should put aside \$146,000 yearly to provide for depreciation.

3. That the operating costs cannot be lessened.

4. That approximately a revenue of \$1,065,000 would be required to meet all these accrued expenses, including the wage increase. That the earnings in 1935 were \$920,400, and that, unless industrial conditions improve, the Company would fall short of requirements by \$145,000.

5. That there is not likely to be any return to a fare higher than five cents, and, even were it to be increased, it might possibly result in decreased number of passengers carried, and therefore make no improvement in earnings.

6. It is the contention of the representatives of the Company that the rate of wages—at least in so far as the operators of the cars and busses are concerned—is already the second highest in Ontario, being second only to New Toronto.

A mass of statements of all kinds have been presented by both sides, and have been examined by the Board, but, in so far as comparative hourly or weekly wages is concerned, they cannot be regarded as more than a general guide, as the circumstances and conditions under which men work in other places may not be similar to those in Hamilton.

It seems to the Board that what constitutes a fair wage for the men should be arrived at aside from what might be determined after weighing with precision all that has been presented in the way of what other street car employees are being paid, even if an exact comparison were possible, but rather in a broader way—namely, what is a fair wage under all the circumstances obtaining, both as to employees' living needs, tempered, perhaps, to some extent, by the financial position of the Company and its contemplated necessary expenditures, and its earning prospects, and as to what the prevailing wages in the district may be for employees of comparable skill and training.

It is in this last spirit that the Board has assayed to deal with the difficult problem, affecting, as it does, about three hundred men. The Board (a majority of its members) feels that somewhere between the wages paid at present and the maximum increase request of the men lies the equitable scale of wages to be paid, and hours per week to be worked; and, in arriving at the conclusion which has been reached, the method employed has not been one of mere guess, with a view of reaching a compromise without regard to the facts at all, but one reached after weighing all matters, as presented by both sides.

Wherefore, this Board recommends that the request of the Employees be not granted in its entirety, but that the following be the wage scale and hours of work per week, viz:—

An increase of four cents per hour to all employees concerned in this dispute, and, for greater certainty, they are as below set forth, viz:—

*Operators of one-man operated car and bus*

	Per hour
First year of employment.....	48c
Second year of employment....	52c
Thereafter .....	58c

and that forty-four hours shall constitute a week's work, instead of forty hours, as now prevailing, and the week's work shall be suitable for the service, to be incorporated in best possible schedule.

In the event of two-men cars being brought into use, the rate per hour to platform men, or operators, shall be five cents per hour less.

With respect to the wages of other employees, the Board recommends that the following wages be paid:—

	Per hour
Blacksmiths.....	56½c
Blacksmiths' Helpers.....	49½c
Painters .....	52½c
Pitmen, 1st year.....	48c
Pitmen, 2nd year.....	52½c
Car Placers, 1st year.....	44c
Car Placers, 2nd year.....	49½c
Car Cleaners, 1st year.....	45c
Car Cleaners, 2nd year.....	47½c
Storemen .....	52½c
Engineers .....	52½c
Janitors .....	47½c
Carpenters .....	57½c
Electricians .....	59c
Controller Men.....	52½c

It is not necessary to set forth the hours of work per day and week for this class of workers, as all that detail is not in dispute, and is set forth in the draft agreement, Exhibit "A," attached to this report.

Section 2 of Exhibit "A" is recommended to read as follows:—

"That, during the continuance of this Agreement, the wage scale of Motormen, Conductors, Bus and One-Man Car Operators shall be as follows:—

	Per hour
First Year of Service.....	48c
Second Year of Service.....	52c
Thereafter .....	58c

Two-men cars and busses shall receive five cents per hour less."

Section 3 to remain as in Exhibit "A," except for Subsection (b), amended as heretofore set forth, and, for clarity, there should be added at the commencement thereof, this clause:—

"For those classes of Employees mentioned in Section 2 herein, the following provisions shall apply."

Section 6 to remain as set forth in Exhibit "A" attached hereto.

Section 7 to remain as set forth in Section 7 of the attached draft agreement, Exhibit "A."

Section 9, ss. (d). The Board recommends that the crew reporting for the initial trip of each day be allowed for reporting time to this extent, that the man report for duty ten minutes ahead of the time for his scheduled run, and that he receive pay at the rate of the schedule for five minutes of such time, and a further similar allowance be made at the completion of the last trip of each day, to inspect cars, make reports, etc.

Clause (d) of Section 9 should be redrafted to conform to this recommendation, if this award becomes operative.

Section 18, paragraph No. 1, should be amended to conform to the recommended increase for this class of Employees.

Section 19 should remain as in the draft agreement, Exhibit "A," but the practice should be to adhere to that provision and not to extend such work to seven days per week, as seems to have been the practice for some time back.

Section 23. The Board recommends that the increase of wages in this report awarded, should take effect upon the first day of November last past, and continue to the 16th day of March, 1937, and that, if a written agreement is executed, that Clause 23 be amended to provide for these provisions.

In making the recommendation for increase, the Board—that is, the majority of its members—feel that the increase of four hours per week will, with the expanding business, affect but few, if any, men adversely, and that the increased hours per week of employment, under the rate now obtaining, is too much of a sacrifice to ask the older employees to assume, for, as long as such continues, these old employees are sacrificing as well for all new men being taken into the service, and to these they owe no particular obligation, in this respect, that a number of those who have sacrificed so generously in the past will soon have reached the time of retirement, and will not have received any adequate return for such sacrifice. The earnings of an operator, with three years of service, amounting to \$21.60 per week, is, in the opinion of the Board, too low, even under all the circumstances, and \$25.52 per week, under the recommended increase, is not an excessive wage.

We have no doubt that the Railway Company can take care of this increase without particular difficulty, even under all the problems of low fare and renewals of track and general depreciation. Business is showing a substantial upward trend, and the increase in savings of the Company has, since the first day of November last, the beginning of the new fiscal year, shown an increase of eight per cent.

It must not be forgotten that the Employees are likely to be faced with an increase of rent, due to the upward trend of business.

We feel that nothing further requires to be said, and so we find, report, recommend and award as above set forth.

All of which we respectfully submit.

Signed this sixteenth day of March, 1936.

(Signed) G. F. Mahon,  
Chairman of Board.

(Signed) Fred Bancroft.

## Minority Report

### *Industrial Disputes Investigation Act*

*In the matter of a dispute between The Hamilton Street Railway Company (Employer) and certain of its employees, being members of Division 107, Amalgamated Association of Street and Electric Railway Employees of America (Employees). Minority Report of J. A. Munro, dissenting Member of the Board.*

Attached hereto is a copy of Agreement with the Company proposed by the men.

The following parts of the Agreement are in dispute:

Section 2; Section 3 (a) and (b); Section 6; Section 7; Section 9 (d); Section 18; Section 19; Section 23.

First, dealing generally with the whole question, in substantiation of their claims the men laid great emphasis on the removal of the jitneys (a serious competitor of the Company) from the streets of the City, alleging that this was accomplished largely through their efforts, and on the consequent increase in revenue to the Company. They pointed out in detail the items of deductions suffered by them since 1931, comprised of the following:

Time and one-half for overtime,  
7c. per hour for Sunday work,  
10 minutes reporting time,  
And time and one-half for legal holidays,

In 1932, a 3c. reduction in hourly rate.

In January, 1933, they stated they reduced their hours from 54 to 40 hours per week at the Manager's request to save a lay off.

This was when 100% one-man cars went into operation. They also urged as an additional reason for granting an increase in pay, the improved showing of the Company in 1935 over all previous years since 1930.

They also presented statements showing comparative rates of pay in other places.

They supplied the Board with many detailed statements relative to wages in other trades and industries, and statements showing comparative costs of living in various places, statements showing percentage of wages to gross earnings on other roads, actual rates and amounts of wages paid to conductors and motormen on other roads, and gave a history of their negotiations with the Company, which on both sides seem to have been carried on in a most friendly manner, all of which has been considered.

It was also asserted by the men that the Company's revenue during the past winter was up 8% for the same period last year.

In reply it was alleged by the Company that, in order to operate the Hamilton Street Railway Company, \$780,000 per annum was required and that in addition \$285,000 per annum was required for interest and depreciation, making a total of \$1,065,000 per annum. Balance Sheets and a Summary of operations were presented in support of this statement. The Summary showed that the gross revenue declined from over one and one-half millions in 1930 to \$920,000 in 1935, and that the surplus declined over the same period from \$140,000 to \$2,605, without making any allowance for obsolescence or depreciation. It further showed that in each of the years 1933 and 1934 there was a deficit of over \$130,000.

It was further stated, and I think not questioned, that an immediate expenditure of \$150,000 is required to renew a mile and a half of track in a location very important to the System.

In addition, the Company requires ten new buses at a cost of about \$50,000. In justification of the \$285,000 figure for interest and depreciation, it was stated, and I accept, that almost \$3,000,000 has been spent by the Company (which, of course, prior to that time was a going concern) within the last eight years on equipment and car barn and tracks, that the System is comprised of forty miles of single track, the average life of which is twenty years, the cost of replacement of which is \$62,500 per mile. I think it was pretty generally accepted by the parties that the great improvement in the showing of the Company in the year 1935 over the years 1933 and 1934, was due almost entirely to the lack of competition from the jitneys, and that further improvement can not safely be anticipated without improvement in industrial conditions. There was an 8 per cent improvement during the winter months with a 6 per cent increase in operating costs, which was attributed to the severity of the weather.

With regard to the request of the operators for a 40 hour week, it was pointed out by the Company that the men admitted that their hours were originally reduced at the request of the management to save laying off men, that no other operators of street cars and buses in Ontario are on a 40 hour week basis. They further urged that the rates of pay now applicable in Hamilton compare favourably with all others comparable in size in Ontario, and that they can, at their present rate of pay, materially increase their earnings by working longer hours, and, in my opinion, a 44 hour week would be reasonable in the circumstances. The chief objection of the men to this seemed

to be that it would mean a lay off of men. The Company pointed out that they should not be required to employ more help than required to properly run the System, and that a number of their employees have reached the age where they will naturally be unable to continue.

Having taken into consideration the evidence and many exhibits filed, which is only shortly indicated by what is outlined above, I would report as follows with regard to the following sections of the draft Agreement attached:

*Section 3 (a)*—That time and one-half should be paid over all schedule time worked on each day to operators as their duties are more arduous, but that no higher rate of pay be paid on Sundays and holidays than at other times.

*(b)*—That instead of the 8 hour day as asked, that the operators shall work a 44 hour week.

*Sections 6 and 7*—As these duties are more onerous and require special ability, the allowance asked for should be made.

*Section 9 (d)*—In all other forms of industry, it is necessary for workmen to properly prepare themselves for their duties, but in this particular form some extra effort must apparently be made by operators prior to actually putting a bus or car in operation.

I, therefore, report that this part of the Agreement should be as follows: 10 minutes reporting time shall be required before the initial trip of each day run, for the purpose of getting the car or bus ready for its day's work, 5 minutes of the 10 minutes to be paid for at the regular rate, and five minutes shall be paid for to each operator for the purpose of inspection of the car or bus and making reports, etc., on returning the said car or bus to the barn on the last trip of each day.

*Section 18*—The evidence adduced before the Board has satisfied me that operating costs cannot be reduced and that no disproportionate part of the earnings of the Company is expended in salaries to the Executives and Officials of the Company.

While it is true that the work of an operator requires a considerable amount of skill and ability, the training period for men is only 10 days, the work steady, and congenial, and they cannot, therefore, be placed in the same category as other trades where a long apprenticeship is required, work uncertain, and conditions often severe.

The evidence also indicates to me that general conditions do not justify anticipating any immediate increase in the revenue of the Company. Consequently, it would appear

impossible for the Company to materially increase their operating cost.

As indicated above, I am of the opinion that, having regard to the type of employment, the men should work a 44 hour week through which their pay will be substantially increased, and that they will then be in receipt of a fair and equitable wage, and I report that, except as set out above, there should be no other increase in pay.

*Section 19*—I report that the ticket clerks should work only 6 days per week but should receive no increase in salary.

All of which is respectfully submitted.

Dated at Hamilton, this 17th day of March, 1936.

(Signed) J. A. MUNRO.

### Disputed Sections of Draft Agreement Considered by Board

Following are the sections of the draft agreement in dispute and considered by the Board:

*"Section 2*—That, during the continuance of this Agreement the wage scale of Motormen, Conductors, Bus and One-Man Car Operators shall be as follows:

	Per hour
First year of service.....	50c
Second year of service.....	53c
Thereafter . . . . .	60c
Bus and one-man car operators	(5) Five cents per hour additional.

*"Section 3 (a)*—Time and one-half to be paid over all schedule time worked on each day.

*(b)*—Eight hours or as near as practicable, shall constitute a day's work, five days per week.

*"Section 6*—Operators working snow ploughs, sweepers, and sand cars, shall be paid one-man car rate, and (5) five cents extra per hour, with overalls supplied for use on such work.

*"Section 7*—Operators shall be paid (5) five cents per hour extra for training students.

*"Section 9 (a)*—All runs must be posted for Motormen and Conductors to make their selection as to the runs they may desire, once in each three months, commencing the first day of January, April, July and October, of each year. In case a run becomes vacant before the three months are up, divide among spare men. Extra men, while operating this class of run, shall be working under the same conditions as the regular men.

*"Section 18*—During the continuance of this Agreement, the wage scale for men employed in this Department shall be as follows:—

	Per hour
Blacksmiths . . . . .	50c
Blacksmith's Helpers.....	52c
Painters . . . . .	55c
Pitmen, 1st year.....	50½c
Pitmen, 2nd year.....	55c
Car Placers, 1st year.....	46½c
Car Placers, 2nd year.....	52c
Car Cleaners, 1st year.....	47½c
Car Cleaners, 2nd year.....	50c
Storemen . . . . .	55c
Engineers . . . . .	55c
Janitor . . . . .	50c
Carpenters . . . . .	60c
Electricians . . . . .	62c
Controller Men.....	55c

Time and one-half shall be paid for all overtime, and also for legal holidays. Work on Sundays, if not overtime, shall be paid seven (7) cents per hour extra.

*"Section 19*—Ticket Clerks shall work (6) six days per week, and shall receive (\$115.00) one hundred and fifteen dollars per month salary.

*"Section 23*—This Agreement and the provisions thereof shall take effect on the first day of . . . . ., and shall continue in force and be binding on the respective parties thereto until the first of . . . . ., and shall continue thereafter in full force and effect until either party shall give thirty days' notice in writing of their desire to terminate the same or to alter any of the conditions thereof."

### Federal Credit Unions in United States

Some indication of the growth of the Federal credit unions in the United States is shown by figures recently made public in *Co-operative Savings*, the monthly bulletin of the Farm Credit Administration. These figures which are published quarterly show that on March 31, 1935, there were 155 Federal credit unions with a membership of 18,137 and a share balance of \$202,729.21. By December 31, 1935, the number of unions had increased to 732, the membership was 113,556 and the share balance \$2,080,443.45.

The Act under which these unions operate is entitled the U.S. Federal Credit Union Act (1934) and was enacted "to establish a further market for securities of the United States and to make more available to people of small means credit for provident purposes through a national system of co-operative credit, thereby helping to stabilize the credit structure of the United States."

This Act is administered by the Farm Credit Administration. Any seven or more persons who desire to form a Federal Credit Union may do so provided they agree to conform to the requirements of the Act.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1936.

THE following table shows the number of disputes, workers involved and time loss for March, 1936, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Mar., 1936 .....	12	1,274	12,265
*Feb., 1936 .....	6	2,902	18,987
Mar., 1935 .....	13	3,303	12,844

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, for a short period of time is frequently not received until some time after its commencement.

While the number of disputes recorded shows an increase, there were substantial decreases in numbers of workers involved and in time loss as very few of the disputes involved large numbers of employees for prolonged periods. In February one strike caused considerable time loss, namely that of cotton factory workers at Three Rivers, P.Q. In March last year three strikes caused considerable time loss, those involving coal miners at Corbin, B.C., and at New Waterford, N.S., and millinery workers at Montreal, P.Q.

One dispute, involving seven workers, was carried over from February and eleven disputes commenced during March. Of these twelve disputes, five terminated during the month, two resulting in favour of the workers, two in favour of the employers while a compromise settlement was reached in one case. At the end of March, therefore, there were on record seven disputes recorded as strikes or lockouts, namely: two strikes of loggers at Cowichan Lake, B.C., loggers, Blind River, Ont., shoe factory workers, London, Ont., leather factory workers, Toronto, Ont., fur collar and cuff workers, Toronto, Ont., truck drivers, helpers and warehouse employees, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute occurred in Toronto on March 14, 1936, when two employees in one factory processing dry fruit, etc., ceased work in protest against a new system, involving the use of a time clock, alleged to cause "speed up" in a high temperature. They were replaced within a short time.

Employees, about 1,600 in number, in a number of cloak and suit manufacturing establishments in Toronto ceased work from March 5 to March 9, 1936, claiming that the employers had resigned from the Toronto Cloak Manufacturers' Association which had a "closed shop" agreement with the International Ladies' Garment Workers' Union in effect from January, 1935, to January, 1937, the wages and hours provisions of which had been extended to all employers and employees in the industry throughout Ontario under the Industrial Standards Act for one year from November 18, 1935 (Labour Gazette, December, 1935, page 1158). As a result of a conference of representatives of the employers and the union at the provincial Department of Labour offices in Toronto, on March 6, the employers again signed the agreement and work was resumed. The authorities concerned stated that the cessation of work was not a strike.

A cessation of work during March by about eight employees in one bakery in Montreal, P.Q., has been reported in the press but particulars have not been received.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

WAITERS, RESTAURANT, VANCOUVER, B.C.—The negotiations on March 4, 1936, arranged for at the end of February, between the proprietor

and the officials of the Hotel and Restaurant Employees' International Union, to settle the strike commencing on February 18, 1936, for increases in wages to the union scale and for payment of arrears, were not successful; and, the strikers having been replaced, the dispute is recorded as terminated.

**LOGGERS, COWICHAN LAKE, B.C.**—Employees in one camp of a lumber company ceased work on March 10 in protest against the discharge of two workers, alleged to be for union activity. The sawmill at Chemainus is reported in the press to have been partially affected, the night shift being laid off. Picketing was carried on at the logging camp and at localities where the employer might be securing new employees. No settlement had been reached at the end of March.

On March 20 employees in another camp of the same company ceased work in sympathy.

**WOOD CUTTERS, NEZAH, ONT. (STURGEON LAKE)**—Employees of one contractor for cordwood ceased work on March 14 demanding an increase in wages from \$1.75 per cord to \$2.25. Through the mediation of officials of the Department of Lands and Forests negotiations resulted in a settlement next day at \$2.00 per cord and work was resumed.

**LOGGERS, BLIND RIVER, ONT.**—Employees of a contractor for a lumber company ceased work on March 30 demanding payment of wages due. It is reported in the press that the Ontario Minister of Lands and Forests arranged with the lumber company for the payment of the money due and that most of the men, or their wives, were paid early in April, also that work would be resumed on April 3.

**SHOE FACTORY EMPLOYEES, LONDON, ONT.**—Employees in one establishment ceased work on March 12, the request of the Canadian Shoe Workers' Union and Allied Crafts for the restoration of wage reductions amounting to 15 per cent made during the past three years having been refused. The union also asked for a closed shop agreement. The management proposed that the dispute be arbitrated but this was refused. Operations in the factory were carried on by about twenty per cent of the workers not on strike and the management stated the others were not being replaced and would be taken back without discrimination and their complaints dealt with. On March 18, the Deputy Minister of Labour telegraphed the representatives of both parties offering mediation of the Department. At the end of the month this offer had not been accepted and no settlement had been made.

**LEATHER FACTORY WORKERS (HANDBAGS, ETC.), TORONTO, ONT.**—Three hundred workers in seven establishments ceased work on March 17, demanding recognition of the Pocketbook Workers' Union, and an increase in wages. After conferences with the Ladies' Handbag Manufacturers' Association it was reported that the union offered to arbitrate the wage scale if the union were recognized. The forty-four hour week is reported to have been in effect with overtime pay for excess hours but the union claims it was not being enforced. At the end of the month a settlement had not been reported.

**FUR WORKERS (COLLARS AND CUFFS), TORONTO, ONT.**—Employees in seven establishments ceased work on March 23 demanding the forty hour week. The fur manufacturers had agreed to grant the forty hour week when the union secured it in Montreal. This being done recently, the coat manufacturers in Toronto adopted the forty hour week but the employers engaged in collar and cuff trimming refused. A large percentage of those involved in the dispute were reported to be on part time due to the slack season.

**MILLINERY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work from March 5 to March 7 to secure the payment of wages in accordance with an agreement with the Hatters, Cap & Millinery Workers' International Union, which expired at the end of February (Labour Gazette, May, 1935, p. 462), extended to all millinery establishments throughout Ontario under the Industrial Standards Act from July 23, 1935, to February 29, 1936. The agreement being renewed, work was resumed.

In another millinery establishment in Toronto the employees ceased work from March 20 to March 24, with the same result.

**SILK FACTORY WORKERS, ST. HYACINTHE, P.Q.**—Weavers in one establishment ceased work from March 26 to March 28, the wages set for a new line of work (piece rates) being unsatisfactory. An adjustment which increased the wages for some operations by ten per cent and others by twenty per cent was agreed to and work was resumed. It was arranged also that an agreement between a newly organized local of the National Catholic Unions and the management would be negotiated. About two hundred employees in other departments were indirectly affected, the establishment being closed during the dispute.

**TRUCK DRIVERS, HELPERS & WAREHOUSE EMPLOYEES, TORONTO, ONT.**—Employees of one storage and transfer company ceased work on March 31 in protest against the dismissal of

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1936\*

Industry, occupation and locality	Number of em- ployees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts prior to March, 1936			
SERVICE— <i>Business and Personal—</i> Waiters, Vancouver, B.C.....	7	21	Commenced Feb. 18, 1936; for increase in wages; terminated Mar. 4, 1936; in favour of employer.
(b) Strikes and Lockouts commencing during March, 1936			
LOGGING— Loggers, Cowichan Lake, B.C..	140	2,660	Commenced Mar. 10, 1936; against discharge of workers; untermi- nated.
Wood cutters, Nezhah Ont. (Stur- geon Lake).....	125	125	Commenced Mar. 14, 1936; for increase in piece rates; terminated Mar. 14, 1936; compromise.
Loggers, Cowichan Lake, B.C...	120	1,200	Commenced Mar. 20, 1936; in sympathy with loggers on strike from Mar. 10; untermi- nated.
Loggers, Blind River, Ont. ....	167	334	Commenced Mar. 30, 1936; for payment of wages due; untermi- nated.
<i>Boots and Shoes—</i> Shoe factory workers, London, Ont.....	200	3,400	Commenced Mar. 12, 1936; for increased wages and closed union shop agreement; untermi- nated.
<i>Fur, Leather, etc.</i> Leather factory workers (handbags, etc.), Toronto, Ont.....	300	3,900	Commenced Mar. 17, 1936; for union recognition and increase in wages; untermi- nated.
Fur collar and cuff workers, Toronto, Ont.....	50	200	Commenced Mar. 23, 1936; for reduction in hours (forty hour week); untermi- nated.
<i>Textiles, Clothing, etc.—</i> Millinery workers, Toronto, Ont.....	7	21	Commenced Mar. 5, 1936; for renewal of agree- ment; terminated Mar. 7, 1936; in favour of workers.
Millinery workers, Toronto, Ont.....	23	69	Commenced Mar. 20, 1936; for renewal of agree- ment; terminated Mar. 24, 1936; in favour of workers.
Silk factory workers, St. Hyacinthe, P.Q.....	100	300	Commenced Mar. 26, 1936; for increase in wages, piece rates; terminated Mar. 28, 1936; com- promise.
SERVICE— <i>Business, etc.—</i> Truck drivers, helpers, ware- house employees, etc., Toronto, Ont.....	35	35	Commenced Mar. 31, 1936; against discharge of workers; untermi- nated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

four employees (alleged to be for union activity) when the workers transferred from a local union to the International Brotherhood

of Teamsters, Chauffeurs, Stablemen and Helpers. The dispute was untermi- nated at the end of the month.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1936, in the review of Strikes and Lockouts in Canada and Other Countries, 1935. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in February was 54 and 8 were still in progress from the previous month, making a total of 62 disputes in progress during the month, involving 34,500 workers with a time loss of 212,000 working days for the month. Of the 54 disputes beginning in February, 7 were over demands for advances in wages, 4 over proposed wage reductions, 11 over other wage questions, 15 over questions respecting the employment of particular classes or persons, 7 over other questions respecting working arrangements, 7 over questions of trade union principle; the other three disputes were sympathetic stoppages. During the month settlements were reached in 45 disputes, of which 6 were settled in favour of workers, 22 in favour of employers and 17 resulted in compromises. In one other dispute work was resumed pending negotiations.

A strike involving 8,110 fitters and other workers employed by one firm of clothing manufacturers at Leeds was in effect from February 20 to March 13, for an increase in piece rates for fitters. Work was resumed pending an investigation of the fitters' claim by the union.

### New Zealand

The number of disputes reported for the year 1935 was 12, involving 65 firms and 2,323 workers, with a time loss of 18,563 working days.

### United States

The strike of 14,000 tire and rubber workers at Akron, Ohio, which began February 17 and which was noted in the last issue of the LABOUR GAZETTE, was settled March 21, by an agreement which included no discrimination in re-employment, notice of wage change and notice of lay-offs to be given, and a work week of from 30 to 40 hours.

The strike of elevator operators and other building service employees which involved 33,000 workers in 2,400 apartment houses, hotels and office buildings in New York city which began March 1, ended March 16 when an agreement was reached by which employers agreed to re-employ the strikers and the question of wage rates and hours were to be submitted to arbitration. In some buildings, strikers were later refused employment when they returned to work and picketing continued at these buildings.

### Wages and Employment on United States Railways

Personnel on United States railways during 1935, averaged 994,076 compared with 1,007,702 in 1934, a decrease of 1.4 per cent. However, due largely to the restoration of standard rates of pay, aggregate compensation to employees increased from \$1,519,000,000 in 1934 to \$1,643,000,000 in 1935, or 8.2 per cent. This information is given by the Bureau of Railway Economics of the Association of American Railroads in its annual review of railway operations. This report also shows that average employee earnings in 1935 showed an increase, being affected by changes in force and working hours, and by the restoration on January 1 of 2½ per cent, and on April 1 of the remaining 5 per cent, of the 1932 wage deduction. Annual earnings per employee averaged \$1,653 in 1935, compared with \$1,508 in 1934. Hourly compensation per employee averaged 68.6 cents in 1935, against 63.5 cents in 1934. These were increases of 9.6 per cent and 8.0 per cent, respectively.

There were five deaths due to silicosis in British Columbia during 1935, with one death in January, 1936, according to information given by the Hon. G. M. Weir, Provincial Secretary, in reply to a question asked in the Legislature. He also added that silicosis deaths were not segregated prior to 1935.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM DECEMBER 1, 1935, TO MARCH 31, 1936

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period from December 1, 1935, to March 31, 1936. (An article covering the period August 1, 1935, to November 30, 1935, appeared in the Labour Gazette, December, 1935, page 1094.)

*Street Railway Employees, Hamilton, Ont.*

—Conciliation proceedings in connection with a dispute between the Hamilton Street Railway Company and certain of its employees being members of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America were reported in the December, 1935, issue of the LABOUR GAZETTE. The dispute arose over a request of the employees for increased wages and the subsequent suggestion of the Company that the working hours of certain operators be increased from forty to forty-four per week. For a time it appeared that this dispute could be settled by mediation but this did not prove to be the case and a Board of Con-

ciliation and Investigation was established on December 16, 1935.

*Linemen, Cablemen, etc., Winnipeg, Man.*—Reference was made in the August and December, 1935, issues of the LABOUR GAZETTE to the application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act of certain employees of the City of Winnipeg being linemen, cablemen, linemen's helpers, troublemen and groundmen, members of Civic Linemen's Association, Winnipeg, Manitoba, and to the efforts which were being made to dispose of this dispute by direct negotiation. On January 31, 1936, the Department was advised that this dispute had been terminated.

*Chauffeurs, Teamsters, etc., Toronto, Ont.*

—On November 25, 1935, members of Local Union Uo. 670, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, employed by the Dominion Transport Company, Limited, Toronto, made application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, it being stated that officials of the Company had not acknowledged the copy of a proposed agreement which had been submitted by officers of the union. Enquiry into the matter was made by the departmental conciliator at Toronto, and subsequently the conciliator at Montreal interviewed the President of the Company at that point. As a result of instructions from the President negotiations were opened between officials of the Company and a committee of the employees, and for a period it appeared that a direct settlement could be effected. This did not prove to be the case, however, and the applicants pressed for the establishment of the Board. A departmental officer again interviewed the President of the Company in Montreal, and subsequently arrangements were made for a conference between officials of the Company and representatives of the employees to be held in Toronto on March 28th. At this conference an agreement satisfactory to both parties was reached.

*Optical Workers, Toronto, Ont.*—On November 25, 1935, a committee representing the Optical Workers' Federal Union, Toronto, sought the assistance of a conciliation officer of the Department of Labour in connection with a strike of members of the union employed in seven establishments in that city. The men had ceased work on November 14

when the employers had refused their demands for increases in wage rates, the establishment of an apprenticeship system, and union recognition. The conciliation officer at once interviewed the solicitor representing the employing companies and arranged for a joint conference to be held the same afternoon. At this meeting certain points were agreed upon by both parties, but the following morning the solicitor informed the departmental representative that he had been unable to secure the approval of the manufacturers. For several days the conciliator continued his efforts to find some basis of settlement and several conferences were held but no agreement was reached. It was stated that at the inception of the strike 114 employees were involved, and by December 21 the employers had secured 25 new workers and all the strikers that were required at that time had been re-employed. The remaining strikers are to be taken back as required.

*Machinists, Ingersoll, Ont.*—On November 12, 1935, a request was received from the General Representative of the International Association of Machinists for the services of a conciliation officer to assist in the settlement of a dispute which had arisen at Ingersoll, it being alleged that the Ingersoll Machine and Tool Company, Limited, had dismissed two of its employees because of their having become union members. Upon investigation by a departmental officer a general understanding was apparently reached and it seemed that any friction which had developed up to that time would disappear. However, on January 28, 1936, the machinists' representative advised the Department that three more employees had been discriminated against because of union affiliation and the assistance of the Department was requested. The conciliator again visited Ingersoll and interviewed the parties interested. It was learned that five additional employees had been dismissed, allegedly because of union membership. The management, however, denied this allegation, stating that the dismissals were for other reasons entirely, but they agreed to re-employ two of these men under certain conditions but with the definite understanding that they would not be required to drop their union affiliation. This undertaking was not at all satisfactory to the men's representative and it was intimated that there was the probability of a strike occurring. In addition to the charges of discrimination it was alleged that the wage rates were very low. The management of the Company was advised of the men's attitude in this respect. On February 17 a number of employees in this plant

ceased work and picketed the establishment. The conciliator visited Ingersoll the following day by which time about one-half the strikers had returned to work. The management agreed to re-employ most of the strikers and the dispute was terminated. Work was resumed on February 19, and on March 30 the Department was advised that work had been found for all but four of the strikers. This Company employs approximately 170 men.

*Automotive Transportation Employees, Toronto, Ont.*—Early in December, 1935, the President of the Canadian Brotherhood of Automotive Transportation Employees, Toronto, advised the Department that an agreement covering wages and hours, recently negotiated between that organization and the Automotive Transport Association, had been submitted to the provincial authorities for approval under the Industrial Standards Act but, as the agreement provided for a 10-hour day, the authorities had refused to sanction it in view of the requirements of the eight hour day legislation enacted by the Dominion Government. It was stated that the employees were becoming dissatisfied and that a strike would inevitably occur if the matter were not settled. At the request of this officer a conciliator of the Department held conferences with both employers and representatives of the employees, and it was finally agreed that the matter would be left in abeyance pending the findings of the Supreme Court as to the validity of The Limitation of Hours of Work Act.

*Steel Workers, Sault Ste. Marie, Ont.*—Under date of January 6, 1936, members of the Algoma Steel Workers' Union employed by the Algoma Steel Corporation, Limited, Sault Ste. Marie, Ontario, made application to the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The application stated that the employees had been unsuccessful in their negotiations for increased wages and the establishment of full seniority rights. A conciliation officer of the Department visited Sault Ste. Marie and held separate and joint conferences with the management of the company and a committee representing the employees. He was successful in finding a basis of settlement which disposed of the dispute to the satisfaction of both parties. The application stated that 1,727 employees were directly affected.

*Quarry Workers, Caledonia, Ont.*—On January 15, 1936, the Department of Labour was advised that quarry workers, members of In-

ternational Quarry Workers' Union No. 265, employed by the Gypsum Lime and Alabastine Company, Caledonia, Ontario, were threatening to strike, and the services of a conciliation officer were requested. Accordingly, a conciliator visited Caledonia the following day and immediately held an interview with representatives of the workers. The officer learned that the union had only been organized a few months and that the management of the company had objected strenuously to this action. It was stated that one of the members had just been discharged and that other dismissals were imminent, and the men alleged it was solely because of their union activities. That same day and before the departmental officer had an opportunity of interviewing the management a second employee was given notice that his services were no longer required. The following morning the conciliator interviewed the manager of the employing company, who contended that the dismissals had been due to what he considered highly injudicious statements and actions on the part of certain of the employees. Further conferences with both parties to the dispute resulted in the reinstatement of one of the men and an understanding as to future relationship.

*Express Employees, Canadian National Express Company.*—Early in February the President of the Canadian Brotherhood of Railway Employees requested the assistance of a conciliator of the Department of Labour in connection with a dispute which had existed for several months between the Canadian National Express Company and certain of their employees, a large number of whom are members of this Brotherhood. The general policy of the Company, it is understood, is to give recognition to the general chairman representing the majority of the employees in any service, and a controversy had arisen between two unions as to which actually had as members the majority of these employees and therefore which general chairman officials of the Company should recognize. The matter was at once taken up and conferences were held with the management in Montreal and later in Ottawa with representatives of both groups of employees affected. Finally arrangements were concluded for the taking of a vote of the employees in this particular service for the purpose of ascertaining which general chairman they desired to represent them.

*Cotton Factory Workers, Three Rivers, P.Q.*—Upon receipt of advice on February 19, 1936, that a strike of approximately 2,000 employees of the Wabasso Cotton Company, Limited, Three Rivers, had occurred the previous night the conciliation service of the Department of Labour was offered to both the management of the Company and to the re-

presentative of the employees. This offer was at once accepted and two conciliators of the Department arrived at Three Rivers on the 21st. Conferences with the parties interested were held but the only concession the manager of the Company would make was that he would re-employ the strikers without discrimination. The original demands of the strikers included union recognition, preference of employment for union members in case of reduction of staff, and a general increase in wages, but these demands were modified greatly during the period of negotiation, and the men would have returned to work had the Company agreed to make effective some minor concessions. In view of the position of the Company the departmental conciliators were unable to mediate further. The Department, however, kept in close touch with the situation, and finally on February 29 the strikers agreed to return to work, under the former conditions but with the definite understanding that the affairs of the company would be investigated by the Royal Commission which had been appointed to inquire into conditions generally in the textile industry. During the entire period of the strike a picket line was maintained but no disturbances occurred.

*Coal Miners, Edmonton, Alta.*—A dispute having arisen between the Kent Coal Company, Limited, Edmonton, and certain of their miners, members of the United Mine Workers of America, as a result of the miners' request for wages in accordance with the union scale in force in most of the mines in the district, a conciliation officer of the Department held conferences with the parties involved from February 24 to February 26. The employees affected had, by a unanimous vote, authorized their representatives to apply for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The management had agreed to pay union data rates but refused the union proposals as to contract rates. As a result of the conferences a compromise was tentatively agreed upon with the understanding that a union agreement would be negotiated.

Appointment of an advisory committee to make a complete survey of all matters pertaining to the coal mining industry, or to the business of marketing coal in the Edmonton district is announced in the Alberta Gazette of March 14. By its terms of reference the committee is empowered to draft regulations governing the industry, to submit recommendations based on its findings, and to report the result of its investigations to the Minister of Trade and Industry. The Committee is to act without remuneration.

## PROVINCIAL LEGISLATIVE PROGRAM OF CONFEDERATION OF CATHOLIC WORKERS

ON March 11, 1936 officers of the Confederation of Catholic Workers of Canada submitted their annual legislative program to the Quebec Government. Several of the proposals made concerned desired amendments to the Collective Labour Agreements Extension Act which the Confederation reported as satisfactory to labour in the main but certain weaknesses had been revealed which the amendments were designed to remedy. It was suggested that Section 2 of the Act, which gives the Lieutenant-Governor in Council power to extend a collective agreement so as to bind all employers and employed in the same trade, industry or business within the district covered by the agreement, be altered to stipulate that the agreement when extended by the Lieutenant-Governor in Council shall bind equally every person mentioned and designated as worker or employer in the said agreement. This proposal appears to be made in order to meet the conditions revealed by the judgment of Mr. Justice Chase-Casgrain in *Hodgkin vs. Coristine Realities Ltd.*, in which it was held that the agreement of the Montreal building trades did not apply to a painter employed by a company engaged in the management of office buildings, since Section 2 provided only that an agreement might be extended to bind all the employees or employers in the same trade or industry and the defendant company was not engaged in the building industry.

The second amendment suggested was that a certificate of competency should be obligatory throughout the district covered by an agreement if the joint committee appointed to enforce the agreement so decided. By an amendment of 1935, such a certificate could be made obligatory for all workmen in municipalities of a population of more than 10,000 and could be issued either by a board of examiners set up by the joint committee appointed to enforce an agreement or by the trade union concerned. Further, it was suggested that the certificate be required to be renewed yearly and, when renewed by a board of examiners, that the board should have the right to charge a fee of not more than five dollars for a qualified workman's certificate and not more than one dollar for a certificate for an apprentice. The Confederation requested, also, that the certificate of competency be issued only by the associations recognized by the joint committee, whether the associations are incorporated under the Companies Act, the Professional Syndicates

Act or unincorporated. In order to facilitate the work of the inspectors of the joint committees in enforcing the agreements, it was suggested that the same powers be given to these inspectors as to government inspectors. In order that the joint committees in the smaller places might have sufficient funds to pay their expenses in ensuring the observance of the Act, it was requested that a percentage of the fines imposed for violations of the law be handed over to the joint committees in municipalities with a population between 5,000 and 40,000.

In 1935, the Collective Labour Agreements Extension Act was amended to provide penalties for violation of any of the terms of a collective agreement which had been made binding other than the wage rates. A fine of not more than \$10 and costs might be imposed for a first offence and for the second and subsequent offences a fine of not more than \$50 and costs. It was provided, also, in 1935 that for violation of the wage rates established by a binding agreement, the convicted person must pay to the joint committee, as liquidated damages, an amount equal to 20 per cent of the wage claim as determined by the judgment of the court. The Confederation of Catholic Workers now proposes that provision be made for a penalty for paying lower wage rates than those fixed in the agreement. It would thus be possible to have a fine imposed or to demand liquidated damages from any person violating the wage rates. It is suggested that the penalty that may be imposed for a second or subsequent offence be raised to a minimum fine of \$100 and a maximum of \$200 and, in default of payment of the fine and costs, to imprisonment for not less than one month and not more than two months. Another amendment is proposed in connection with Section 14a according to which it would be an offence for an employer or employee to give false information to a joint committee or to the inspector acting on behalf of the joint committee. Previously, the section referred only to false information supplied to an inspector. For this offence, it is also proposed to raise the penalty to which any employer or employee is liable for a second or subsequent offence and to provide, in default of payment of a fine, for imprisonment from one to two months. It is suggested, also, that wherever a certificate of competency is required, a fine not exceeding \$10 and costs may be imposed on any employer or employee who fails to

carry out this requirement of the law. For a second and subsequent offence a minimum fine of \$25 and a maximum of \$50 is suggested. Other recommendations relating to the Collective Labour Agreements Extension Act are to the effect that requests for exemption should be referred to the joint committees for decision and that periodical meetings of the secretaries and inspectors of joint committees should be held. It is considered that valuable service might be rendered to the Government by such meetings.

Finally, it is requested that two sections of the Collective Labour Agreements Extension Act be repealed. One of these declares the Act not to apply to railway companies subject to the jurisdiction of the Parliament of Canada. The other section permits the Lieutenant-Governor in Council to refuse to apply the provisions of the Act to any industry liable, in his opinion, to suffer, through their enforcement, serious injury from the competition of foreign countries or of other provinces.

As a supplementary measure to the Collective Labour Agreements Extension Act, the Confederation proposes that special provision be made for the establishment of minimum rates of wages, and a plan for the fixing of minimum rates is outlined. It is pointed out in the memorandum submitted to the Government that in a number of industries the Collective Labour Agreements Extension Act is for the present practically inapplicable. The Confederation proposes that where wages are unduly low and hours of labour long and these matters are not regulated by a collective agreement, the Government, on petition of a certain number of employees in such an industry, should call upon the employers and employees to form an industrial council in which each group would have equal representation, with an impartial chairman and two other persons to represent the consumers chosen by the Government. The council, so formed, would assume the task of establishing reasonable minimum wages and maximum hours of labour for the industry concerned. The Lieutenant-Governor in Council would be given power to make effective any order arrived at by the council in a district or throughout the province according to the circumstances. It is intended that such a council should be a permanent body to see that the orders are carried out and to receive complaints. Government inspectors would make any necessary inquiries and would report to the industrial council. Severe penalties should be provided for any violation of the regulations. If, in any industry governed by an industrial council, the employers and employed wish to take advantage of the provisions of the Collective Labour Agreements

Extension Act they should be permitted to do so. The orders of the industrial council would cease to apply to them when a collective agreement arrived at by the parties had been made binding by order in council under the Act. The Confederation proposes that this special Minimum Wage Act which is somewhat along the lines of the British Trade Boards Act, should apply not only to industry but also to commerce and to certain trades and professions where minimum wages cannot otherwise be fixed.

In view of the importance of labour legislation in Quebec, the establishment of a Labour Court is requested. It is also proposed that an Economic Council should be set up composed of technicians, economists and sociologists who would act in an advisory capacity and initiate legislation.

In order to stimulate industry, it is suggested that basic industries be subsidized by the Government and that taxes on such industries should be reduced. It is pointed out that this action has been taken in some European countries and particularly in England in connection with the shipbuilding industry. The Confederation suggests, however, that the greatest care should be taken in granting such assistance in order to insure against abuses such as the payment of low wages or the occurrence of strikes or lockouts without recourse to the provincial Trade Disputes Act. The Confederation recommends also that industrialists be required to have licences.

In regard to the Workmen's Compensation Act, the Confederation repeated its request that an injured workman should be permitted to choose his own physician and that decisions of the Workmen's Compensation Commission may be appealed. A change was suggested in the method of computing earnings for the purpose of reckoning compensation. A fair and reasonable wage for a day's work multiplied by 300 should be regarded as the yearly wage. It was recommended that a representative of organized labour be appointed as a member of the Workmen's Compensation Commission and that amendments to be made to the Act should be referred to a committee of employers and workers for report to the Lieutenant-Governor in Council.

Last December, the Quebec Court of King's Bench decided certain questions submitted to it with reference to the provincial Sunday Observance Act. It was held that the Provincial Legislature could repeal Section 7 of this statute which declares persons observing the seventh day of the week as Sabbath and abstaining from work on that day not to be liable under the Act for working on the first day of the week if the work does not disturb other persons in the observance of the first

day of the week and if the place where such work is done is not open for trade on that day. In view of this decision, the Confederation requests the Provincial Government to avail itself of this right in order to require better observance of Sunday as the Sabbath.

In the matter of contracts for public works, the Confederation requested that the Government accept tenders only from persons who have signed a collective agreement with a professional syndicate having a civil personality under the Professional Syndicates Act, 1925, and that this condition be incorporated in the specifications. It is also suggested that municipalities situated within a district covered by a collective agreement made binding under the Collective Labour Agreements Extension Act should be required to observe the hours of labour fixed in the agreement and that the Limitation of Hours of Work Act should be amended to this end.

To give effect to a draft convention of the International Labour Conference on night work in bakeries, the Confederation requests that all work in bakeries between 7 p.m. and 4 a.m. be prohibited. It is proposed, also, that the provincial law concerning bread be amended so as to permit the joint committee established under the Collective Agreements Act to determine the weight, quality and selling price of bread. It was pointed out in a letter to the Premier by the bakers' union in the Montreal district that the master bakers were unable to pay rates of wages fixed in the collective agreement owing to the low price of bread.

In connection with the Minimum Wage Act for women, the Confederation petitions that the Minimum Wage Commission revise, as soon as possible, the orders which still contain the 80 per cent clause, that is, the clause providing that in the case of piece-workers, with more than six months' experience, it is sufficient if at least 80 per cent receive the minimum rates set out in the order. Several of the Quebec Minimum Wage Orders have been revised and this clause omitted so that all employees, whether time workers, piece-workers or those paid on any other system are subject to the specified minimum wages. The Catholic Workers suggest that the Commission should first revise the orders relating to the printing and tobacco trades. Further, it is requested that the Commission should expedite the issuing of orders to cover all work carried on by women and that wherever

women's trade unions exist they should be consulted regarding such orders. Another amendment to the Minimum Wage Act proposed by the Confederation would make it apply to all hotels, clubs and restaurants and not only to those in towns with a population of 5,000 or more. Finally, the Confederation recommends the appointment of a woman as a member of the Minimum Wage Commission.

An amendment is proposed to the Pipefitters Act to limit the number of apprentices, that may be employed by a contractor in installing or repairing heating systems, refrigerating systems or mechanical sprayers, to one for every five journeymen instead of one for every journeyman. A similar amendment is requested in connection with the Electricians Act.

Other recommendations of the Confederation of Catholic Workers include the exemption from seizure of the wages of a workman for the first nine months of regular employment after a period of unemployment; the more careful inspection by experienced inspectors of die-cutting and other machinery in the shoe industry; the publication by the Government of a building trades manual and free technical handbooks on the building trades; and the prohibition of dismissal of a worker on account of his membership in a recognized trade union. Finally, at the request of the painters' union it was proposed that the use of spray guns be forbidden except in workshops with special equipment for the purpose and, at the request of the wood lathers, that the use of blued nails in lathing be recognized as more sanitary.

The delegation which presented the legislative requests to the government comprised: Alfred Charpentier, president of the Federation, Montreal; Henri Quevillon, of Hull, first vice-president; Emile Tellier of Three Rivers, second vice-president; Gerard Picard of Quebec, Secretary-treasurer; and J. T. Robitaille of Quebec; Alph. Bourdon, of Montreal; Albany Blanchard, of St. Hyacinthe; Adelard Collette of Sherbrooke, and Laurent Beaulieu of Chicoutimi, directors; Rev. Father Georges Cote, chaplain. They were received by Hon. L. A. Taschereau, Prime Minister of the province, and members of the cabinet. According to press reports, the premier discussed many of the matters presented, and definitely promised the enactment of enabling legislation in respect to the Dominion Old Age pensions Act.

## CONVENTION AND LEGISLATIVE PROGRAM OF NEW BRUNSWICK FEDERATION OF LABOUR

The twenty-third Annual Convention of the New Brunswick Federation of Labour, composed of thirty delegates representing ten localities in the Province, was held in Fredericton March 10-12, 1936, with president J. E. Tighe, Saint John presiding.

A civic welcome to the delegates was extended by His Worship Mayor G. W. Kitchen, who was introduced by Mr. Harry Ryan, president of local No. 2, Bricklayers, Masons and Plasterers' International Union.

Other speakers to address the convention were: Hon. A. A. Dysart, Premier of New Brunswick; Hon. Dr. W. F. Roberts, Minister of Health and Labour; Hon. F. C. Squires, Leader of the Opposition in the Legislature, and Mr. R. J. Tallon, secretary-treasurer Trades and Labour Congress of Canada.

The recommendations contained in the adopted resolutions were:

Appointment by the Federal Government, of a fair wage officer for the Maritime Provinces.

Establishment of minimum rates of pay for all classes of workers within the province.

Reduction of interest rates on homes and farms.

Prohibition of foreclosures of mortgages on farms and dwellings.

Opposition to the granting of a franchise for the operation of commercial vehicles on highways which parallel a railway.

Issuance of an insurance policy by the Provincial Legislature, with each set of automobile licence plates, to cover personal injuries.

Enactment of legislation for the protection of workers using paint spraying machines.

Appointment of a qualified boiler inspector.

Opposition to the granting of a fixed valuation for school purposes, to a certain company in Moncton.

Redistribution of seats for the Provincial Legislature based on population.

Placement of employees of the well boring industry under the Workmen's Compensation Act.

Amendment of the Intoxicating Liquor Act so as to permit newspapers and magazines printed within the province to accept advertising relating to liquor products.

Issuance of licences to operate moving picture machines only to those who have served an apprenticeship under licensed operators for a term of not less than two years.

Appointment of a board to examine moving picture machines, the board, to consist of not less than three licensed operators of more than five years actual operating experience.

Opposition to maintenance-of-way employees on the Atlantic Region of the Canadian National Railways being required to maintain increased sections.

That those in financial difficulties may apply to a police magistrate, who would be authorized to order a debtor's employer to pay into court debtor's salary or wages, and to pay to the debtor such amount as sufficient to support himself and family, the balance to be paid monthly to the debtor's creditors, and all proceedings against the debtor in any court shall cease.

Stricter enforcement of the Motor Carrier Act.

On the last day of the convention, the entire delegation waited on the provincial government, and in addition to the foregoing recommendations, the proposed legislative program included, among others, the following requests:

Increased benefits to the citizens of the various cities and towns from the distribution of electric power from the stations operated by the provincial hydro commission.

Enactment of Fair Wage legislation.

Establishment of a Department of Labour.

The putting into effect of old age pensions, mothers' allowance, minimum wage, children's protection and housing commission Acts.

Establishment of a six-hour day and five day week.

A fairer system of relief distribution.

Distribution of free school books.

Compulsory school attendance until pupils are sixteen years of age.

Stricter enforcement of the Forest Operation Commission Act.

Re-drafting of Factories Act.

Adequate labour representation on educational commission if established.

Further amendments to the Workmen's Compensation Act.

With respect to the British North America Act the federation urged provincial co-operation to effect the following amendments:

(a) Ensure the full competence of the Federal Parliament to enact any social and labour legislation affecting Canada as a whole, and particularly that included in the draft conventions and recommendations from the regular and special sessions of the International Labour Office (League of Nations).

(b) Permit the control over industrial and commercial activities essential to ensuring observance of proper labour standards and eliminate unfair competition between provinces.

(c) To empower the Federal authorities to effectively regulate highway transport and thus eliminate unsafe standards of operation and unfair competition with other established methods of transportation.

(d) Restrict the powers of the Senate to veto any bill passed at two sessions of the

House of Commons, which practice is in harmony with that of the British Parliament.

(e) Abolish appeals to the Privy Council.

The officers elected for the ensuing year were: President, Jas. A. Whitebone, Saint John; vice-presidents, G. W. R. Myles, Moncton, J. B. Johnston, McAdam, J. H. Wallace, Reynolds; secretary-treasurer, George R. Melvin, Saint John.

Fredericton was again selected as convention city.

## Working Hours in Shoe Repairing Industry (Island of Montreal)

Under the Act respecting Limiting of Working Hours (LABOUR GAZETTE, July, 1933, page 695), Orders in Council have been published by the Quebec Department of Labour covering limiting of hours of work in the shoe repairing industry.

This industry was defined as comprising the making to measure of shoes and the repairing of same in shoe repairing shops.

According to the original Order (No. 580) the working period for employees in the shoe repairing industry must not exceed 64 hours per week. Other provisions governing this industry were as follows:—

*Article II.*—The division of working hours to be the following the first four days of the week, the hours of labour to be distributed between 8.00 a.m. and 7.00 p.m.; Friday, between 8.00 a.m. and 9.00 p.m.; and Saturday, between 8.00 a.m. and 11.00 p.m.

*Article III.*—The employers must grant their employees, each day, one hour for their noon-day meal, and on Friday and Saturday, one hour for their evening meal.

*Article IV.*—A workman (*operarius*) exercising the trade of shoe repairer, whether or not he employs other persons, is subject to the provisions of the present Order in Council, if he personally works in a public or private parlour.

Any person hiring the service of such a workman, contrary to the provisions of the present Order in Council, is liable to the penalties set forth in article 7 of the said Act.

*Article V.*—The present order is applicable within the limits of the city of Montreal.

However, are also governed by these provisions, all establishments operated within a radius of 10 miles from the limits of the city of Montreal, if such establishments solicit or obtain the greatest proportion of their orders, according to the opinion of the inspector, from citizens of the city of Montreal.

This Order was amended on March 11 by Order No. 764 which substituted the words "Island of Montreal" for "City of Montreal."

Another amendment dated March 18 added Article 11a to the original as follows:—

"11a.—In conformity with Section 6 of the said Act and notwithstanding Sections I and II of the present order, the Inspector of Labour may, in case of urgent work, grant an overtime

permit for work not exceeding 2 hours per day and a total of 6 hours per week; no permit shall authorize overtime work on Saturday."

## Regulations Governing Apprentices in British Columbia

General regulations with respect to the obligations of apprentices and employers have recently been published in the British Columbia Gazette. (The Apprenticeship Act in British Columbia came into effect on September 9, 1935, and its provisions were outlined in the LABOUR GAZETTE, June, 1935, page 522). These regulations are as follows:—

1. Obligations of apprentice during period of apprenticeship:—

(a) To render diligent service to his employer and to avoid damage or waste of equipment or goods.

(b) To attend regularly his place of employment, and in addition to make himself proficient by attending such classes in trade-training and related subjects as may be required of him, and, generally, to be subject to and obey all regulations made by the Provincial Apprenticeship Committee governing his apprenticeship.

(c) To notify immediately the Inspector of Apprenticeship of any difficulty that may occur to interfere with the carrying out of the terms of his apprenticeship contract.

2. Obligations of an employer of an apprentice:—

(a) To provide adequate training of an apprentice in all branches of the trade in so far as his facilities and the character of his work will permit.

(b) To pay wages not less than on the scale set out in the apprenticeship contract and to keep the apprentice employed so long as work is available.

(c) To abide by and carry out the regulations governing apprenticeship made by the Provincial Apprenticeship Committee and to facilitate the apprentice doing likewise.

(d) To notify immediately the Inspector of Apprenticeship when employing a minor in any designated trade and advise him of any difficulty that may occur to interfere with the carrying out of the terms of an apprenticeship contract.

To the list of trades under the Act was added that of automobile maintenance: (a) automobile mechanic; (b) automobile metal work; (c) automobile-tire reconditioning.

## ANNUAL REPORT OF CANADIAN NATIONAL RAILWAYS SYSTEM

### Review of Operation, Activities, Employment, Pensions, Etc., in 1935

**D**URING 1935, gross operating revenues and operating expenses of the Canadian National Railways showed increases—the former of 5·2 per cent and the latter of 4·6—according to the annual report of the system for the year ending December 31.

The increase of \$8,282,000, or 5·02 per cent in revenue compares with an increase of 5·5 per cent on United States Class I railroads. Freight revenue increased \$7,626,496, or 6·05 per cent, while the increase in passenger revenue amounted to \$313,471 or 1·9 per cent. Slight increases were also registered in mail and express traffic.

Low fare excursions again showed satisfactory results, but the reason for the small increase in passenger revenue was attributed to two factors: "First, the increased use of air-conditioning equipment, and high speed trains with intensified advertising of these features on the part of the United States railroads, which reduced travel in Canada; and second, increased highway competition."

Referring to the increase of \$6,990,170, or 4·6 per cent, in operating expenses (on Class I railways in the United States this increase was 6·3 per cent) the report stated that in addition to the expense of providing additional services to accommodate increased traffic, operating expenses were increased \$4,491,482 as a result of reduction in wage cuts. As explained in the section of the report dealing with wages and labour, the 15 per cent payroll deduction which was in effect in 1934, was reduced to 12 per cent on January 1, 1935, and 10 per cent on May 1, 1935 (LABOUR GAZETTE, November, 1934, page 991). Then, under an arrangement effective April 1, 1935, all deductions from basic rates of pay on the United States railways were restored. Also, the expenditure on locomotive fuel increased from \$14,705,092 in 1934 to \$15,585,008 in 1935, an increase of \$879,915, or 6 per cent. One-third of this increase was due to increased consumption and two-thirds to increased prices.

Net operating revenue, i.e., the amount of revenue remaining after payment of all operating expenses, was \$14,258,253, compared with \$12,966,423 in the previous year. Having regard to the effect on operating expenses due to wage adjustments and increased price of fuel and other materials, the improved net revenue is regarded as satisfactory.

For 1935 the cash deficit of the railways was \$47,421,464 as compared with \$48,407,900 in

the previous year and with \$58,955,388.41 in 1933.

*Employment and Wages.*—The average number on payrolls of the railway during 1935 was 75,053, as compared with 74,774 in 1932. In 1933, when the lowest level of employment was recorded, the average number in service was 70,625. The total pay in 1935 amounted to \$104,861,520, an increase of \$6,453,418 over 1934.

*Pension Plans.*—Dealing with pensions, the report states that under the revised Canadian National Pension Plan (LABOUR GAZETTE, April, 1935, page 329) the number of contributors at the end of the year was 18,714.

In considering this number in relation to the total number of employees, the report points out that due allowance must be made for the number engaged on lines in the United States who are excluded from the Canadian National Pension Plan because they are subject to Federal pension legislation; also for those who are members of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund and the Grand Trunk Railway of Canada Superannuation Fund; also for those whose length of service does not entitle them to contribute and for those who for one reason or another have decided not to add to their service or basic pension provided at the sole expense of the Company. Allowance should also be made for the wage deductions which are still in effect and the short hours worked in various branches of the service. The gross amount of member contributions during the year was \$1,172,137. Employees' funds and the accrued interest thereon are held by the Company in a separate trust account and invested in obligations of the Dominion or obligations guaranteed by the Dominion.

Apart from a comparatively few excepted positions, retirement under the Canadian National Pension Plan is compulsory at age 65.

Regulations have also been adopted to the end that as far as possible retirement at age 65 will shortly be universal rule throughout the System in Canada whether the employees are embraced within this pension plan or not.

During the year, 787 employees were retired on pension. Pensioners deceased numbered 227. The number on pension at December 31, 1935, was 3,960 and the total pensions paid during the year amounted to \$2,179,054.

Under the Intercolonial and Prince Edward Island Railways Employees' Provident Fund

rules, 152 members were retired on pension during the year. Pensioners deceased numbered 95. The number on pension at December 31, 1935, was 1,765 and the total pensions paid during the year amounted to \$1,481,002.

The situation with respect to the Grand Trunk Railway of Canada Superannuation Fund was also outlined.

*Unemployment Relief Expenditures.*—Referring to the work done under the Supplementary Public Works Construction Act, 1935 (LABOUR GAZETTE, July, 1935, page 617) the report detailed the equipment to be acquired at an estimated cost of \$6,791,155. In addition to the equipment program, the report referred to an agreement between the railway and the government whereby the former would provide increased employment (for at least six months) amounting to two additional days per month for its shop forces located at various centres on condition that the cost of such additional employment was advanced by the government by way of loan, without interest, not exceeding \$1,200,000.

*Land Settlement.*—Reviewing operations under the railway's department of colonization, the report emphasized that there is "still a vast amount of fertile land adjacent to Canadian National lines, unoccupied and undeveloped, contributing nothing toward the maintenance of railway services." It was pointed out that it was vitally important to the railway to develop these untapped resources in the production of new traffic. Summarizing activities in this direction, the report

states that within the year, 2,863 families, 3,223 heads of families, and 2,637 single men, preparing new homes, were settled on 807,797 acres of land. This movement covers the settlement of families having agricultural experience with capital of their own, families settled under the relief settlement schemes financed by the Federal and Provincial Governments, and a limited number of immigrant families from the United States and Overseas with sufficient capital and farming experience. In addition to the foregoing settlement, a total of 5,734 single men were sent out to assured employment in farming and lumbering operations.

During the year, the Industrial and Natural Resources Department reported that 318 new industries or extensions to existing plants were established along the lines of the Canadian National, on which were expended over \$10,000,000, and employment made for an additional five thousand persons.

*Medical Service.*—Reference is also made to the medical services provided by the railway in periodic examination of its employees to ascertain their physical fitness for service. On Canadian National lines during 1935 the number of examinations of men engaged in the movement of trains, dining and sleeping car employees, steamship crews and others was 9,350. In addition, 9,207 employees engaged in the movement of trains were examined as to vision, colour sense, and hearing. Medical aid is also afforded to employees injured in service.

### Vocational Training in New Brunswick

According to the seventeenth annual report of the New Brunswick Vocational Education Board, for the year ending October 31, 1935, there were 1,392 students enrolled in full-time day vocational classes, and 193 in part-time classes, making a total of 1,585 pupils in day schools. The number of teachers for day classes was 62 full-time and 1 part-time. In the evening classes the total enrolment was 1,107, the number of teachers being 45 of whom 25 were males and 20 females.

An analysis of the history of 313 students who graduated on June 30, 1935, indicated that 105 of these secured employment along lines of their training, 19 were otherwise employed, 69 were taking advanced work, 12 were nurses in training, 100 were at home, 2 were married, one ill and 5 unknown. Considering the opportunities for securing employment, the director regarded this as "very encouraging."

During the year the director organized educational classes in three of the five districts

where Federal relief projects were in operation. Arrangements have also been completed, at Fredericton, and Saint John, for unemployed men to attend night classes.

The annual report of the chief superintendent of education for New Brunswick indicated that during the school year 1934-35, the following were the average salaries for teachers: Grammar school, \$1,863.87; Superior, \$1,114.20; First Class Male, \$931.29; Second Class Male, \$588.13; Third Class Male, \$418.50; First Class Female, \$832.93; Second Class Female, \$491.33; Third Class Female, \$391.93.

These rates show a considerable reduction from the average salaries in effect in 1925, the decreases ranging from \$116.10 per year for third class male to \$327.88 for first class male teachers. The total number of teachers employed was 2,733 for the first term and 2,787 for the second term.

## MOTHERS' ALLOWANCES AND CHILD WELFARE IN NOVA SCOTIA AND SASKATCHEWAN

### Annual Reports of Administration of Legislation in 1935

#### Nova Scotia

THE operation of mothers' allowances in Nova Scotia during the fourteen months period ending November 30, 1935, and the special problems attendant upon the administration of this legislation under present economic conditions, are reviewed in the sixth annual report of the director.

In the period covered by the report there were 1,239 assisted families, comprising 3,720 children, and the disbursements in allowances amounted to \$413,997.35. Comparing this fourteen month period with the five previous years the record indicates successive increases both in families assisted and allowances paid. During the first year of operation there were 1,030 assisted families with 3,179 dependent children and \$310,602.04 paid in allowances. In the second, third and fourth years, the corresponding figures were: second year—1,108 families, 3,342 children and \$331,336.72 in allowances; third year—1,158 families, 3,487 children, and \$341,929 in allowances; fourth year—1,168 families, 3,549 children, and \$356,074.70 in allowances. As indicative of the changed and difficult situation, the report states that general economic conditions have caused many families, normally self-supporting, to seek aid under the Act. Older children have been unable to augment the family earnings, and widows who formerly could provide in whole, or in part, for the sustenance of their families have been obliged to rely upon the assistance provided by this measure. The extent to which the administration's resources have been strained and the prevailing interpretation put upon the Act are revealed in the following observations:

"It is evident that there will always be widows with children in these classes, no matter how prosperous the country generally may be. When, however, the provisions which were primarily intended for these specific groups are extended to take in all families where there are young children in need of assistance, the matter is no longer Mothers' Allowances in the original sense of the word but becomes assistance to families in need and does not differ in any material sense from the assistance to any family requiring direct relief or financial help. To express it another way, the young children in the family where the husband is out of work through no fault of his, or ill, are often quite as much in need

of assistance and equally as worthy as the children of the widow and, when the widow has older unmarried children perhaps ranging in ages from sixteen to thirty years, it is difficult to justify the payment of public funds to the one class and not to the other.

"It appears that the primary purpose and the original intention in granting Mothers' Allowances are being forgotten by the public generally and that such allowances are too commonly regarded as something due to every widow with children simply because she is a widow. Even the fundamental qualifications, namely that there is financial need which cannot otherwise be met, and that the widow is worthy, are often ignored by those pressing claims. We receive many applications which show that the families have considerable funds and property. Investigation discloses in other cases that, based on any reasonable standard, the mother is not one to whom such funds should be paid. It is also quite apparent that there is little effort made and not much consideration given by many of the applicants as to whether they can so manage their affairs that their families may be maintained without public aid. There seems to be a well settled conviction that public financial assistance is available to all widows."

The statistical tables show that the total number of applicants during the year under review was 330 of whom 99 were found ineligible, while 231 were approved. These 231 new beneficiaries had 785 children, the average number of dependent children per family being 3.39. The number of children over 16 years of age in the new families was 429, and their total reported monthly earnings were \$2,217.35 of which amount \$709.00 was contributed to home support. In 78 of the 231 approved applicants the families were without any property or cash assets. Of the applicants approved by the director, the number of mothers with one dependent child was 24; with two children, 63; with three children, 48; with four children, 43; with five children, 25; with six children, 15; with seven children, 6; with eight children, 4; with nine children, 1; with ten children, 1; and with 11 children, 1.

There were 211 cancellations and 20 renewals during the year. The sum required for the payment of allowances in 1936 is estimated at \$368,880; the total required in connection with the operation of the Act being estimated at \$382,630.00.

### Saskatchewan

A review of the administration of mothers' allowances, child welfare and old age pensions in Saskatchewan during the year ended April 30, 1935, is contained in the recently published annual report of the Bureau of Child Protection.

In an outline of the methods employed for the protection of children the Commissioner of Child Welfare points out that during the early years, the practice was to place children in shelters or institutions. The Department, however, early adopted the system of placing children in free foster homes under inspection. This method developed drawbacks due "to a tendency for good homes to deteriorate," entailing continuous inspection and removal if necessary. Within the last ten years the policy of the department has been to make increasing use of carefully selected, paid foster boarding houses. Another new departure, in all child caring agencies, is that of endeavouring to keep children in their own homes "by assisting in trying to rehabilitate poor homes and to give financial assistance where poverty is the main cause of suffering." In this respect, provision for mothers' allowances was considered to be of major importance.

Since the inception of the department in 1909, 4,340 children have been committed as wards and approximately the same number have been placed in homes without the neces-

sity of a formal commitment. During the period under review there were 1,080 dependent children under official care, of whom 806 were wards of the Commission, the balance being under the five children's aid societies of the province. The total amount in trust accounts and bank savings in the names of children at the end of the fiscal year was \$6,472.25.

Other phases of child welfare dealt with juvenile delinquency, mental defectives, legal adoption of children, children of unmarried parents, blind children, and the work of the children's aid societies.

*Mothers' Allowances.*—The annual report of the Mothers' Allowances Branch noted the "same steady increase during the year as was the case in the previous year." This increase was attributed to prevailing conditions in the province, more particularly to poor crops and unemployment, and partly to the fact that a great number of people having used up their reserve resources.

The statistics indicated the following situation as at April 30, 1935: number of widows, 1,906; number of dependents, 723; number of guardians, 110; number of deserted wives, 87; total families 2,826; amount paid, \$38,192; average paid per recipient, \$13.51; number of children under sixteen years, 7,368; and average paid per child, \$5.18. The total amount paid in allowances throughout the year was \$440,580.00.

### Invalid and Old Age Pensions in Australia, 1934-35

Statistics of invalid and old age pensions and maternity allowances in Australia for the year ended June 30, 1935, have recently been published by the Acting Commissioner of Pensions and Maternity Allowances. (An account of the Australian pension system was given in the LABOUR GAZETTE, September, 1929, page 967.) The amendment to the "property clause" in the Pensions Act (December, 1933) was reviewed in the LABOUR GAZETTE, April, 1934, page 335.

The Invalid and Old Age Pensions Act of 1908 established the pensionable age for men at 65 years, though in event of permanent incapacity this is reduced to 60 years. Those portions of the Act which authorize payment to women on attaining the age of 60 years and payments to invalids came into operation on December 15, 1910.

The statistics for the year 1934-35 show that there were 36,567 pensioners admitted during this period. Of this number, 25,834 were admitted on account of old age and 10,733 were invalid pensioners. The total number of pensioners (both invalid and old age) on June 30, 1935, was 273,978—an increase of 13,313. The number of old age pensioners per 10,000 of population was 293 while the number of invalid

pensioners on the same population basis was 114. Exclusive of payments for the maintenance of pensioners in benevolent asylums and hospitals, the annual liability for pensions as on June 30, 1935, was £12,028,406.

*Maternity Allowances.*—According to the provisions of the Commonwealth Maternity Act (which was outlined in the LABOUR GAZETTE, April, 1928, page 414) a sum of £5 was paid to the mother in respect to each confinement at which a living or viable child was born. No distinction is made between married and unmarried mothers. However, the Financial Emergency Act of 1931 reduced the maternity allowance from £5 to £4 as from July 20, 1931, and in respect of births occurring on and after October 12, 1932, a maternity allowance is not payable if the income of the claimant and her husband for the twelve months preceding the date of the birth exceeded £208. During the year ended June 30, 1935, a total of 76,442 claims were paid and 5,866 claims were rejected as compared with 75,781 claims paid and 7,289 rejections in the previous year. The total amount paid in allowances in 1934-35 was £329,321 as compared with £302,928 in the previous year. The cost of administration of maternity allowances totalled £12,000.

## RECOMMENDATIONS OF CONFERENCE OF MAYORS

CONSTITUTING one of the major proposals of the Second Meeting of the Dominion Conference of Mayors, held in Ottawa on March 24-25, was the recommendation that the federal government assume the administration and entire cost of unemployment relief throughout the Dominion from April 1, 1936.

Deliberations of the conference were divided into five sections with separate committees studying relief, finance, housing and public works, extension to urban property owners of the provisions of the Farmers' Creditors Arrangement Act, and organization of the Conference on a permanent basis.

The report of the Relief Committee, which was adopted, declared unemployment to be "a national emergency and a national responsibility," and recognized as such by the Dominion Government. Continuing, the preamble considered that "the costs of unemployment relief have been improperly bestowed upon municipalities," resulting in breaking down the financial structures of urban centres. After pointing out the contributing factors to the mounting municipal burden and the resultant effect in dwindling revenues and impaired property values, the resolution of this committee, asserting that the conference of Mayors represented five millions of the population, called upon the Dominion Government to take over and assume the administration and entire cost of unemployment relief as from April 1, 1936. By resolution, the Dominion Government was asked to appoint at least one member from the Conference to the Commission on Employment. Consideration of the "serious condition" of the nation's youth was also requested of the federal government.

*Housing.*—The Committee on Housing and Unemployment presented a resolution, subsequently approved, which (after emphasizing the "unsatisfactory housing conditions in many Canadian cities," and the lack of private capital to construct dwellings of the type required for those in the lower income groups) recommended as follows:—

"That as an aid to a works program, the Dominion Conference of Mayors urge that the Government of Canada develop a housing plan designed to correct the aforesaid conditions, and requests that subsidies be provided for the purpose of eliminating slum conditions, by a process of rehabilitation, and by building new homes, for the purpose of adequately housing the people."

*Farmers' Creditors Arrangement Act.*—The committee studying the extension to urban property owners of the benefits of the Farmers'

Creditors Arrangement Act recommended that the Conference request the Dominion government to extend the provisions of this legislation to all classes of citizens. In support of the resolution it was pointed out that many urban residents were "seriously embarrassed by prevailing economic conditions" and that since the Act had been of benefit "to many farmers in providing an honourable way out of their difficulties" it "would be of equal value to many thousands of our citizens at present excluded from its provisions, and would assist them in retaining their homes and re-establishing themselves in life."

Other adopted recommendations of the Conference included: federal assistance for the blind; and federal and provincial participation "financially and administratively in a supervised policy to establish upon small acreages of garden lands families now registered upon relief."

Comparative statements of the relief situation in Canadian municipalities (prepared by Department of Social Research, McGill University) and of the financial situation in Canadian municipalities (prepared by Professor H. Carl Goldenburg of McGill University) were submitted to the Conference.

The above recommendations of the Conference were conveyed to the Dominion Government by a delegation.

A resolution requesting the Minister of Mines to recommend and press upon the proper authorities that a fair proportion of the unemployed, who are to be released from the relief camps, be employed in cutting out and grading roads to connect the newer mining areas with the railroads was unanimously passed by the Canadian Institute of Mining and Metallurgy at its recent convention in Ottawa.

There were 4,843 accidents reported to The Ontario Workmen's Compensation Board during March, as compared with 4,428 in February, and 4,880 during March a year ago. The benefits awarded amounted to \$529,461.45, of which \$434,579.88 was for compensation and \$94,881.57 for medical aid.

The accidents reported during the first quarter of 1936 numbered 13,687, as compared with 13,884 during the same period last year, and the benefits awarded amounted to \$1,423,914.93, as against \$1,430,635.12 during the corresponding period of 1935.

## ANNUAL CENSUS OF MANUFACTURING AND CERTAIN OTHER INDUSTRIES IN CANADA, 1934.

### Statistics Respecting Employees, Wages, Etc.

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, railways, etc., and general manufacturing in Canada. Preliminary figures for all manufacturing industries for the year 1934 have been issued, and the accompanying tables give the figures in some detail.

The first table contains summary figures for all manufacturing industries from 1930 to 1934, numbers of establishments, capital invested, employees on salaries and wages, and value of production. The figures show increases in all of the items from 1933 to 1934 as contrasted with decreases in nearly all from 1930 to 1933, the numbers of establishments being the only item which increased throughout the period, while the number of employees on salary increased in 1931 and the cost of materials increased in 1933, there being substantial increases in the prices of raw materials. The decrease in wages paid each year would be due in part to short time operations, prevalent in nearly all of the industries during this period, becoming less in 1934.

The second table shows the numbers of employees on salaries and on wages with salaries and wages paid as well as the number of establishments, for 1934, by provinces and

by groups of industries and for each of the important industries in each group.

Statistics for 1933 appeared in the issue of the LABOUR GAZETTE for April, 1935, pp. 338-340. The issue for September, 1935, pp. 823-825, contained figures as to the numbers of wage-earners classified according to the regular hours of work per week, 40 or less, 44, etc., up to 60 and over 60. Similar information for 1934 will be available for publication in a future issue.

The third table gives the figures as to numbers of employees and salaries and wages paid in the other industries for which figures are collected annually. It will be noted that all show increases in 1934 except telephones and electric railways.

Figures from the Decennial Census of 1931, Bulletin XXXI, showing numbers of gainfully employed persons in all industries were given in the LABOUR GAZETTE for August, 1933, pp. 819-821; also figures from Bulletin XXXIII, as to numbers of wage earners, weeks employed and average earnings, were given in the LABOUR GAZETTE for November, 1933, pp. 1094-1095.

TABLE I.—MANUFACTURING INDUSTRIES IN CANADA, PRINCIPAL STATISTICS, 1930 TO 1934

(c) Not including operators paid on commission.

(d) Full time employees only.

## REPORT OF THE ROYAL COMMISSION ON THE COAL INDUSTRY IN ALBERTA, 1935

The report of the Rt. Hon. Sir Montague Barlow, Bt., P.C., K.B.E., L.L.D., Minister of Labour for the United Kingdom from 1922 to 1924, appointed by the Provincial Government of Alberta, September 13, 1935, to inquire into the methods of conducting the coal mining industry and the possibilities of its future development, was presented in December, 1935, and has been issued recently.

The nature of the inquiry was outlined in the *LABOUR GAZETTE*, November, 1935, p. 976, i.e. to inquire into the cost of production, transportation, distribution and marketing of coal, capitalization, financial organization and cost of management; wages and working conditions, living costs and conditions of housing and general welfare of mine workers; the practicability of schemes to increase demand, improve marketing methods, establish standards of coal, bring production into relation to consumption and to promote rationalization, co-ordination or amalgamation in the industry or any part of it.

The report of the Commission, 102 pages, deals at some length with marketing and the regulation of mining and distribution of coal, as well as with labour relations, capitalization, etc. Developments in the industry since the inquiry by a Royal Commission in 1925 were outlined. This Commission was appointed December 1, 1924, and reported on February 15, 1926, the members being Mr. H. M. E. Evans, Chairman, Mr. R. G. Drinnan and Mr. F. Wheatley, representing the coal operators and the mine workers respectively (*LABOUR GAZETTE*, May, 1926, p. 439).

In the introduction to the report the Commissioner states that the two principal problems to-day in the coal industry, marketing and regulation, arose from the difficulty of finding adequate markets for the rich deposits of easily mined coal in Alberta and from unsatisfactory and even chaotic conditions due to excessive competition, price cutting, unfair practices, etc. It was found, however, that "there were no broad and contentious issues disclosed by the evidence in the relations of capital and labour" but there were certain problems relating to the welfare and social conditions of labour such as workmen's compensation, mine rescue work, housing and conditions in closed camps.

The report states that the estimates of the coal resources in Alberta made in previous years, including that given to the Evans Commission in 1925, have been considerably modified in recent years by the provincial authorities, and the coal resources are now estimated

at 40,200,000,000 tons of which half is recoverable by mining. Of this tonnage sixty per cent is under the control of the provincial government. The production of coal fell off from 7,336,330 short tons in 1928 to 4,748,848 tons in 1934, including 2,295,566 tons of lignite, 537,542 tons of sub-bituminous and 1,915,740 tons of bituminous. There was also a considerable falling off in the average number of miners employed and in the average number of days worked in the year, the figures for 1934 being 153 days in lignite mines, 164 in bituminous mines and 162 in sub-bituminous mines. The Commission stated that the seasonal and irregular character of the operations in the industry was increased by the operation of too many mines and that while this gave employment to more miners it was on the basis of too few days per week and too low an average weekly wage. It also caused an unnecessarily high proportion of overhead costs per ton produced, and idle time was estimated to increase production costs by an average of 40 cents per ton. During the last three years the bituminous mines had an average profit of 13 cents per ton, sub-bituminous mines a loss of eight cents and lignite mines a loss of 15 cents per ton.

As to marketing the report gives figures as to the consumption of coal in Canada and as to the sale of Alberta coal in various provinces and in the United States. In 1934, 1,687,850 tons or 38.7 per cent of the output was sold to railways, while to other consumers 1,087,898 tons were sold in Alberta, 986,639 tons in Saskatchewan, 391,132 tons in Manitoba, 127,638 tons in British Columbia, 55,947 tons in Ontario and 13,739 tons in the United States. The report outlines the establishment of the Dominion Fuel Board in November, 1922, to promote the use of Canadian coal throughout Canada and lessen the dependence on the supply from the United States, the peril of which had been emphasized by the wartime Fuel Controller in March, 1919, already experienced as a result of strikes as long ago as 1902, and again in 1922-23 and to a less degree in 1925-26. This resulted in the granting of special freight rates on Alberta coal shipped to Ontario in 1923, 1925 and 1926, for experimental shipments, continued since, and also in Dominion Government subventions (\$2.50 per ton since 1933) to further assist the movement.

In connection with unemployment relief it is stated that an additional shipment of 300,000 tons of Alberta coal to Ontario with an increase in the subvention of 50 cents per

ton would increase miners' payrolls by \$489,000 and railway payrolls by \$1,248,000 and would cost the Government only \$150,000 extra.

The efforts of the Alberta Government to promote the sale of coal in Ontario, through the appointment of a Trade Commissioner at Toronto, and through expenditure for publicity are reviewed and suggestions made for the extension of such activities.

Regarding mine workmen and labour relations the Commissioner states that while the average number of employees throughout the year 1934 was 7,143, about the same as in 1924, the number on the payrolls on December 31, 1934, was 9,655 as against 12,061 on December 31, 1924. This indicated that the industry could not provide continuous work for all engaged in it, miners in the lignite fields particularly getting only one day's work per week (if any) during six months in spring and summer. This serious problem, it was found, was being met to some extent by consumers, especially railways, spreading their orders evenly over the year but in respect to the mines producing domestic coal the difficulty of storage was encountered.

The Commissioner states that the various associations of coal mine operators in existence some years ago had ceased to exist but that the operators conferred in groups for joint action on occasions and an association had recently been formed in the Drumheller Valley. Reference was also made to the principal miners' unions, the United Mine Workers of America, District 18, and the Mine Workers' Union of Canada and to the existence of various local groups or associations.

"In an industry of this character the ideal undoubtedly is that there should be strong and responsible associations of operators on one side and of workers on the other; and it is unfortunate that no such association of operators exists. The interests of the domestic coal operators and of those handling steam coal to some extent proceed on different lines; at the same time, there are instances (for example where negotiations with the Government or with the miners are concerned) where they have a common interest.

"In various portions of this Report recommendations are made that the Government should take action after consulting the operators as a body, and in the absence of any representative association it is not easy for such consultation to take place on organized and proper lines. It is desirable that an Association should come into existence representing the whole of the operators of the Province; it would naturally fall into two sections, (a) the steam coal operators, and (b) the domestic and sub-bituminous oper-

ators, who could each meet separately for the consideration of matters relating only to their own branch of the industry, but could confer and act together with regard to matters relating to the industry as a whole."

With reference to industrial relations the Commissioner states that no particular matters of major importance relating to agreements were brought up and though there was some objection to payment on a contract basis (piece rates) it was not seriously pressed. Proposals for a minimum day rate for miners to be paid if earnings fell below such minimum were made and the Commissioner stated this was done in Great Britain and should be discussed when agreements are revised. The wages paid in small mines were found to be low, and frequently unsatisfactory, and the establishment of minimum rates, as in Great Britain by Trade Boards for sweated trades and industries, was recommended.

Regarding wash houses, recommendations for improvements in some cases were made.

Housing for miners was found to be adequate, especially in the steam coal areas and the Lethbridge district, but improvements were recommended in certain other districts, as well as generally throughout all districts, including the installation of water supply in houses. Sanitary conditions were found to be unsatisfactory and it was recommended that better provision should be made and that municipal authorities should enforce better standards.

Closed camps were dealt with at some length, these being all located in provincial forest reserves, the area in each being under lease from the Government, the mining company in some cases owning all the buildings including houses, stores, schools, halls, etc. Some misunderstandings as to access for the public were reported but it was pointed out that the statute provided for this. It was recommended that the mining companies should not leave themselves open to suspicion of monopoly or of being arbitrary in regard to the rights of miners to their houses; that the terms of leases for sites for houses, etc., should be clear and without severe restrictions; that the terms of such leases should be approved by the Minister of Lands and Mines; also that the Government should retain the right to grant leases for sites for houses and stores.

Regarding Workmen's Compensation and mine rescue work, a proposal that the Workmen's Compensation Board should appoint safety inspectors was not approved by the Commissioner, as it would be dividing authority with the Mines Branch, and it was recommended that mine rescue work should be

transferred from the Board to the Mines Branch and that the Board should pay over to the Mines Branch that part of the assessment on operators collected for mine rescue work. Rescue cars and equipment were found to be satisfactory generally but some improvements were suggested as to the means of transportation.

With reference to miners' certificates, it was recommended that, as proposals for Class B certificates in 1929 had not been carried out, some provision should be made for young men to gain experience by working at the coal face under experienced miners.

A Mining Industry Welfare Fund was recommended, either by a levy per ton of coal produced or a percentage of wages paid, to produce \$45,000 per annum to which the provincial government should add fifty per cent taken from its royalties, making \$67,000. This should be administered by a Board consisting of equal representation from the operators and miners with the Minister of Lands and Mines, or his representative, as Chairman; two-thirds to be used for promoting miners' welfare, including better houses, and the remainder for research, publicity, etc., in the interests of the industry.

The most important recommendations of the Commissioner were as to marketing and regulation of the industry including control of development, price fixing, quotas, etc., and are summarized as follows:

*Ontario Market.*—That the railway companies should be asked for an assurance that the special freight rate on coal to Ontario, \$8 per ton, would be continued for five years, but reduced 50 cents; that the Dominion Government be asked for an assurance that the \$2.50 per ton subvention be continued for five years, but increased by 50 cents; that the Minister of Lands and Mines determine the types of coal best suited for shipment to Ontario and establish more uniform standards as to grades and sizes of coal; that the provincial government contribute \$10,000 annually for five years for publicity or until the Coal Industry Welfare Fund is constituted and able to provide for this; that the Minister take steps to secure the acceptance of these proposals by a substantial majority of the operators in each district.

*Department of Trade and Industry Act, 1934.*—That the powers conferred on the Minister of Trade and Industry under the Act, in so far as they apply to coal mining and distribution, be transferred to the Minister of Lands and Mines. These powers provide for the summoning of conferences of

those engaged in an industry to establish standards of wages, wholesale and retail prices, trade practices, etc., to be made binding on all in the industry by Order in Council.

*Operators' Association.*—That the Minister under this Act invite a conference of the coal mining operators with a view to constituting an operators' association for the province with separate branches for steam coal and domestic coal.

*Control of Development.*—That the Government definitely announce a policy of refusal to grant new leases of undeveloped minerals during the next five years, save in exceptional circumstances, and that the Minister arrange with freeholders and leaseholders of undeveloped lands to make inoperative for five years any obligations to commence active operations or to produce specified quantities of coal, being relieved of state charges, etc., during such period, and being assured of preference in regard to licences for commencing operations when trade improves.

*Formulation of a Code.*—That the Minister, under the Department of Trade and Industry Act, invite operators, miners and distributors to appoint representatives to confer with him for the purpose of formulating a code of methods and practices, with the object of putting an end to competitive practices detrimental to the trade, to those engaged in it and to the public.

*Fixed Prices and Minimum Wages.*—That the Minister under the Department of Trade and Industry Act confer with those in the domestic coal industry to establish pithead prices of domestic coal and a minimum wage in small mines.

*Quotas, Central Selling Agencies, Amalgamation.*—That the Minister under the Department of Trade and Industry Act promote conferences with those in the domestic coal industry and those engaged in the sale and distribution of such coal to establish a rationalization scheme, or schemes, to regulate output on a quota basis, particularly in the Drumheller Valley, with a view to the limitation or adjustment of output; to establish a central selling agency for the Drumheller Valley or any other portion of the domestic coal industry; to consider schemes of rationalization or amalgamation of mines in the domestic coal industry with a view to providing that production may be obtained from those mines which are more capable of efficient and economical operation.

## MEDIATION ON UNITED STATES RAILWAYS

THE first annual report of the National Mediation Board, created by amendments to the United States Railway Labour Act of 1926 and approved June 21, 1934 (LABOUR GAZETTE, July, 1934, page 655) has been published recently. Provision was also made in the amended Act for the establishment of a National Railroad Adjustment Board, and annual reports of the four divisions of that Board are also included in the publication.

As pointed out in the introduction, the amended Railway Labour Act is the culmination of 45 years of experience with legislation to govern the relations of employers and employees on the railroads and to promote peace and order in those relations as a means of preventing interruptions to interstate commerce.

In reviewing the work of the National Mediation Board during 1934-35, the report noted that in that period there were no strikes in the railroad industry. The employees of two roads voted to strike but at the request of the Board action was postponed pending mediation. Apparently this freedom from major industrial disturbances on the railways in the year 1934-35 was consistent with the almost perfect record over a period of nearly ten years. In this respect the report observes:

"Since the enactment of the Railway Labour Act in 1926 there has been an almost unbroken record of peaceful settlement of labour disputes on the railroads. . . . That the railroad industry could maintain such a peaceful record especially since 1932 when strikes and industrial unrest have been prevalent in other industries throughout the country, is testimony to the soundness and effectiveness of the labour policies formulated by Congress in the Railway Labour Act. . . . But there has been no lack of labour disputes in the railroad industry. It differs from other industries only in that its disputes are amicably adjusted with the aid of the agencies set up by the Act."

The record of cases is summarized in the following paragraphs:

As indicated in the final report of the former United States Board of Mediation, there were on the open docket at the beginning of the fiscal year 317 pending and unsettled cases. During the year 252 additional cases were filed with the present Board, making a total of 569 cases in which the services of the Board were required.

Of these, 221 were grievance cases involving the interpretation or application of existing agreements. Since the amended Act created the National Railroad Adjustment Board to render final decisions in all such cases, the

parties were asked to withdraw these from mediation and to submit them to the Adjustment Board. This was done in all the 221 cases, leaving 348 subject to the jurisdiction of the National Mediation Board. The Board disposed of 166 cases during the year, and there remained pending on June 31, 1935, 182 cases.

The cases subject to the jurisdiction of the National Mediation Board are, broadly speaking, of two general kinds: (1) Mediation cases, involving disputes between carriers and employees regarding changes in rates of pay, rules, or working conditions; (2) Representation cases, involving disputes among employees as to who shall be their duly designated and authorized representatives.

The 166 cases disposed of by the Board during the year involved more than 100,000 employees on 117 different railroads.

Of these cases, 96 were representation disputes among the employees, requiring an investigation by the Board and a certification of representatives to the carrier and to the parties. In 56 of these 96 cases the Board took secret ballots of the employees involved, and issued certifications on the basis of the results of the elections. Two cases required a second election to be held so that the Board conducted 58 elections during the year. In 33 cases signed authorizations of employees designating their representatives were checked against the payroll records of the carriers, and representatives were certified on the basis of the proved authorizations. Four cases were adjusted by the carrier recognizing the employees' representatives without a formal certification. Two were withdrawn and one was dismissed by the Board on the ground that the employees for whom an election was requested did not constitute a craft or class within the meaning of the Railway Labour Act.

Many more than 96 disputes were involved in these 96 cases. In most of the cases several different crafts or classes of employees were in disagreement as to their representatives, and the Board was required to ascertain the choice of representatives by each craft or class separately. A total of 273 certifications were made by the Board determining the choice of authorized representatives by the various crafts or classes of employees involved in disputes in the 96 cases.

In addition to the representation cases the Board handled 70 disputes between carriers and employees requiring mediation services. Twenty-four of these were settled by written mediation agreements entered into by the parties with the assistance of the Board, and one case was adjusted without a written agree-

ment. The efforts of the Board's mediators resulted in the withdrawal of 19 cases, and 21 were withdrawn before mediation began. Two cases were referred back to the parties for further negotiations at the request of the employees' representatives; and two others were dismissed by the Board when investigation developed that the employer was not subject to the Railway Labour Act.

Two cases the Board was unable to settle. All efforts through mediation having failed, the parties were asked to submit these disputes to arbitration under the provisions of section 7 of the act. In both cases, however, the carriers refused to arbitrate, and the Board therefore closed the cases, all the procedures under the Railway Labour Act having been exhausted.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Revision of Minimum Age Conventions

The Governing Body of the International Labour Office, at its 74th session, which was held in Geneva from February 12-22, 1936, decided to take up with all of the Member States of the International Labour Organization the desirability of amending four Conventions of the International Labour Conference which were adopted in 1919, 1920, 1921 and 1932, laying down a minimum age limit of fourteen years for admission to employment in industry, at sea, in agriculture, and in non-industrial employment respectively. The amendment which is in contemplation would raise the minimum age limit in each case from fourteen to fifteen years.

The proposed revision procedure has not as yet been definitely inscribed on the agenda of the International Labour Conference, as the Governments of the Member States will first be asked for an expression of their views on this matter.

### Wages and Hours Statistics

The Governing Body of the International Labour Office has decided to call a technical conference of statisticians in 1937 to consider a proposal for the adoption of an international Convention on the subject of statistics on wages and hours of work.

### The 1937 Conference Agenda

The Governing Body has decided to place the following questions on the agenda of the 1937 session of the International Labour Conference: (1) organization of public works in relation to employment; (2) reduction of hours of work in the printing and kindred trades; and (3) reduction of hours of work in the chemical industry.

### Working Hours in Australia

The Prime Minister of Australia recently announced that in view of the importance of obtaining information and considered opinions on the question of working hours the Government had decided to convene a Conference to enquire into and report upon the question whether any or what general reduction of working hours in Australia is desirable and practicable, having regard to the social, economic and national interests of Australia as a whole.

The Prime Minister stated that the Conference would consist of the Chief Judge of the Commonwealth Arbitration Court, a representative of State Industrial Tribunals, four employers representing primary industries and manufacturing and commercial interests, four representatives of organized labour, an economist, a medical man, a woman representing consuming interests, and (as non-voting members) a Commonwealth Treasury officer and a Customs officer. Sittings would normally be held in private, witnesses being called only in special cases on the direction of the Chairman.

In announcing this decision, the Prime Minister added that the Commonwealth Government realized that the Commonwealth Parliament had no power to legislate generally with respect to hours of labour, which must still largely be controlled by State Parliaments and by industrial tribunals exercising their own judgment in particular cases. The Government, nevertheless, felt that on this matter as much guidance as possible should be obtained from a full examination of the relevant social, economic and financial considerations.

### New Zealand Government and Shorter Hours

The New Zealand Minister of Labour has recently convened a conference of employers' and workers' representatives to meet at an early date for the purpose of discussing the Government's proposals for changes in the existing labour legislation. Among other things, the conference will consider the reduction of hours of work.

The Minister made the following statement:

One of the major questions to be submitted to the Conference for consideration is the contemplated shorter working week or its alternative. Personally I am decidedly in favour of a 40-hour week. It is part of the Government's policy. The question of how it will be applied and also to what industries it can be made applicable will, of course, be one of the most important phases of the subject and it will be gone into most carefully with the parties concerned.

The Minister mentioned that the question of hours was to be discussed at the International Labour Conference in June and added that he had been giving some thought to the advisability of introducing modified working hours in New Zealand before the subject was discussed by the Geneva Conference.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MARCH, 1936

### Reports of the Superintendents of the Employment Service

**T**HE employment situation at the end of March, 1936, was reported by the superintendents of the Employment Service of Canada to be as follows:—

Little activity was reported in farming in the Maritimes, although spring ploughing had started in some sections. River driving was under way in the logging industry and a number of men had been sent out for that purpose. Sawmills were also being set up in preparation for spring work. Fishing was much handicapped owing to drift ice, but lobster fishermen were getting ready to set their traps. Coal mines in the New Glasgow area operated one and two days a week, while those in Cape Breton and vicinity worked from two to five days, with one mine reporting a week's idleness. Although there were no new developments in manufacturing, manufacturers of confectionery and foodstuffs, pulp and paper mills, sugar refineries, wood products and steel industries reported conditions more favourable and factories busy. Building construction remained practically unchanged, with all buildings in course of erection progressing favourably. Reconstruction work at West Saint John, however, had been stopped and 140 men laid off. Civic street and sewer work continued. Transportation, both freight and passenger, was well up to the average. Trade was seasonally good with collections fair. The usual number of placements was made for women workers in household service.

Farming was quiet in the Province of Quebec. Logging, also, reported lessened activity, due to mild weather, although a few river drivers had been hired. Industrial conditions throughout the province showed little change. Tobacco was quiet, but a slight improvement was noted in the clothing and shoe trades and iron and steel plants. Not much building construction was in evidence, other than repairs and minor alterations. A number of men found employment in the larger centres in snow removal. Transportation was good at Quebec City, but slackened at Three Rivers. Slightly more trade was recorded, particularly in Montreal. The demand continued active for domestic help, but few openings were available for those desiring clerical positions.

Activity in farming in Ontario increased with the advancing season; a number of orders was received and wages offered were somewhat higher. Logging operations were almost completed and bushmen were returning to the cities until such time as river driving should

commence. Mining was rather quiet and would likely remain so until after the snow was gone. Manufacturing establishments were running fairly steadily, with little change in staffs. Some industries reported slackness, while others were busier, due to seasonal conditions. One office reported that fewer skilled workers in a number of trades were out of work, the call for this type of employee having been greater than usual. Very slight improvement was noted in building construction. Several special works programs were awaiting government approval, and other building construction was held up until the advent of more favourable weather for outdoor work, but prospects were brighter in this line for the coming months. Domestic work in the Women's Department was plentiful, with suitable applicants scarce. Many were inexperienced; others were unwilling to leave the city, while some were young and employers did not wish to hire those whom they would have to train. Little demand was recorded for clerical workers, but the industrial departments were busier with the placement of women and girls in factories.

Owing to unfavourable weather, the placement of farm hands in the Prairie Provinces was somewhat retarded. The heavy fall of snow, however, was of great value to the farmers in many districts, in that it provided additional moisture for the land. Logging was quiet, except in the Edmonton zone. The colder weather caused renewed employment at some of the coal mines, but this was only of a temporary character. Manufacturing was fairly good at Winnipeg and Edmonton, but slow at Calgary and Medicine Hat. Quietness prevailed in building, although a number of men were placed on various municipal and provincial projects. Some activity was noted in railway operation, but there was no extra call for help. Trade was slack. Fewer calls were received for city domestics in the Women's Division, however the demand for country and farm domestics was greater than the supply of applicants willing to take such positions.

There was a fair number of calls for farm workers in British Columbia, although few men were sent to orchard growers, as the season was late in starting. Logging was active, with the prospects favourable for a busy year. Saw and shingle mills, also, were operating fairly steadily. Mining was brisk, but there was no movement of workers. Manufacturing showed some improvement at

Kamloops; elsewhere the situation was unchanged. Conditions were also somewhat better in the building industry, although some lines of work were handicapped by adverse weather. Employment at Prince Rupert was increased, mainly in connection with the fishing industry. Relief projects continued in various centres. Drydocks and shipyards at Prince Rupert were fairly active, but quiet at Victoria. The waterfront was busy at Prince Rupert,

and at Victoria and Vancouver plenty of work was to be had, although not sufficient to provide employment for all idle longshoremen. Trade was slow. Little change was noted in the Women's Division. Casual work was slack, but a good demand existed for experienced cooks-general, however, the applicants available were not sufficiently experienced to fill all positions offered.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1936

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 9,411, the employees on their payrolls numbering 931,959 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,763, having an aggregate membership of 168,853 persons, 13·8 per cent

of whom were without employment on March 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of March, 1936, as Reported by Employers

Industrial employment at the beginning of March showed moderate improvement, although the situation in some localities and industries continued to be adversely affected by unfavourable weather conditions. Reports were tabulated by the Dominion Bureau of Statistics from 9,411 employers whose payrolls were enlarged from 926,888 persons at February 1, to 931,959 at March 1, or by 0·5 per cent. The index, based on the 1926 average as 100, stood at 98·9 at the latest date, compared with 98·4 in the preceding month, and with 96·4 at March 1, 1935. The experience of the last fifteen years shows that the average change in employment between February 1 and March 1 is a comparatively small increase, gains in nine of the years since 1920 rather more than offsetting losses in the remaining six. The advance at the date under review was very slightly below the average, with the result that the index, after adjustment for seasonal trend, declined by 0·2 points from 103·9 at February 1 to 103·7 at the beginning of March. The seasonally-corrected index was also lower than

at January 1, 1936, but with these exceptions, was higher than in any other month since the spring of 1931.

The greatest improvement at the beginning of March occurred in manufacturing; the additions to staffs in leather, textile and iron and steel factories were most noteworthy. Among the non-manufacturing industries, there were advances in metallic ore mining, steam railway transportation, highway and railway construction and maintenance, services and trade. The largest gains were in construction and trade, where they compared favourably with the declines that have usually occurred in these industries in the late winter; the increase in the former was due in the main to snow-clearing operations. On the other hand, logging reported very pronounced seasonal contractions that greatly exceeded the average loss indicated at March 1 in the years since 1920, while the mining of coal and of other non-metallic minerals also showed curtailment.

For March 1, 1935, statistics had been received from 9,062 employers with a combined

working force of 902,301 persons, compared with 885,961 in the preceding month. Although this increase had been on a larger scale than that noted at the same date of the present year, the index number was then 2.5 points lower than at March 1, 1936, when it stood at 98.9.

The index numbers of employment at March 1 in the sixteen years for which data are now available are as follows:—1936, 98.9; 1935, 96.4; 1934, 92.7; 1933, 76.9; 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0; 1922, 82.9 and 1921, 89.1.

quieter, and there were decreases in steam railway operation and highway construction; little general change occurred in manufacturing. Employment at March 1, 1935, had shown a much larger contraction; the index then was some three points lower than at the date under review, when it stood at 101.7. Reports for the beginning of March of last year had been tabulated from 626 firms, whose payrolls aggregated 70,280 persons, compared with 71,256 in the preceding month.

*Quebec.*—Employment in Quebec showed a small decrease, comparing unfavourably with the considerable increase recorded at March 1,

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

### Employment by Economic Areas

The trend of employment was upward in Ontario and the Prairie Provinces, while activity declined in the Maritime Provinces, Quebec and British Columbia. The situation in each of the five economic areas was better than at the same date of last year.

*Maritime Provinces.*—There was a moderate reduction in employment in the Maritime Provinces, where the 649 reporting employers reduced their staffs from 72,951 at February 1, to 72,582 at the beginning of March. Gains were registered in shipping and railway construction, those in the latter being considerable. On the other hand, logging was seasonally

1935, and also comparing unfavourably with the small gain which is the average change between February and March in the last fifteen years. Substantial improvement occurred in manufacturing and railway construction; within the former group, leather, lumber, textile, tobacco and beverage and iron and steel plants were decidedly more active. Logging recorded pronounced losses as the active season drew to a close, and there was also curtailment in mining, transportation and trade. Statements were tabulated from 2,235 firms, whose payrolls aggregated 262,617 employees, as against 263,193 at the beginning of February. The index, at 95.1, was moderately higher than at March 1, 1935, when it stood at 91.3; the

index then was computed from statistics furnished by 2,157 establishments, with 250,572 persons on their payrolls, an increase of 5,000 over their staffs in the preceding month.

*Ontario.*—Expansion was noted in Ontario, where the 4,176 co-operating establishments added 5,680 persons to their forces, bringing them to 398,449 at March 1. The trend of employment at that date in the years for which data are available has not invariably been upward, although the average change in the years since 1920 has been a moderate increase. The gain at the beginning of March, 1936, though considerably exceeding the average increase indicated at March 1 in the years since 1920, was smaller than that noted at the same date in 1935. The index then, at 103.5, was fractionally lower than at the latest date, when it stood at 103.8. The 4,010 firms whose returns were included in the tabulation for March 1, 1935, had employed 394,882 workers.

There was an advance in factory employment in Ontario at the beginning of March, 1936, manufacturers having added 2,139 workers to their staffs. Leather, lumber, textile, iron and steel and non-ferrous metal works showed greater activity. Among the non-manufac-

turing classes, highway construction recorded substantial improvement, and there were gains on a smaller scale in mining, transportation, railway construction and trade. On the other hand, logging showed a decline as the season's operations neared completion, and shipping and building construction also released employees.

*Prairie Provinces.*—There was a contra-seasonal increase in employment in the Prairie Provinces at March 1; this was especially interesting because the trend has been downward at that date in fourteen of the fifteen preceding years for which statistics are available. The index number at the date under review, at 95.1, compared favourably with that of 87.2 at March 1, 1935. Data were tabulated from 1,380 firms with 120,280 employees at the beginning of March, compared with 118,548 in their last report. Within the manufacturing industry, there was a decrease in animal food factories, but improvement was indicated in vegetable food, textile and some other divisions, resulting in a moderate increase in the group as a whole. Steam railway operation, highway and railway construction, services and trade also showed heightened activity, the gains in trade being especially noteworthy. On the other hand, coal-mining was seasonally slack. The

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS.

(AVERAGE CALENDAR YEAR 1926=100).

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Feb. 1.....	98.4	102.2	95.2	102.4	93.7	94.1
Mar. 1.....	98.9	101.7	95.1	103.8	95.1	92.4
Relative Weight of Employment by Economic Areas as at Mar. 1, 1936.....	100.0	7.8	28.2	42.7	12.9	8.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

1,331 employers making returns for March 1 of last year had reported 109,938 employees, compared with 112,360 at the first of February, 1935.

*British Columbia.*—The manufacture of lumber and food products showed a decline, and logging construction, services and trade also afforded less employment. On the other hand, mining and shipping and stevedoring showed improvement. The working forces of the 971 co-operating employers aggregated 78,031 persons, as compared with 79,427 in the preceding month. The index, at 92.4, was fractionally higher than at March 1, 1935, when it had stood at 91.9; the 937 firms then furnishing statistics had employed 76,629 workers.

Index numbers of employment by economic areas are given in Table 1.

### Employment by Cities

Employment increased in six of the eight cities for which separate tabulations are made, Montreal, Quebec City, Toronto, Ottawa, Hamilton and Winnipeg showing an upward movement, while in Windsor and Vancouver contractions were indicated. The gain in Toronto was most pronounced.

*Montreal.*—Further additions to staffs were reported on the whole in Montreal; there was

improvement in manufacturing, (chiefly in leather, textile, tobacco and iron and steel factories), but transportation, trade and construction showed curtailment. Statements were tabulated from 1,303 firms employing 133,207 workers, as compared with 131,733 in the preceding month. The advance indicated at the beginning of March in 1935 had been decidedly larger, but the index then was lower by over two points than at the date under review, when it stood at 88.5.

*Quebec.*—Manufacturing afforded more employment, mainly in the leather group, but transportation, construction and other industries were slacker. The working forces of the 168 co-operating employers totalled 12,359 persons, compared with 12,207 at February 1, 1936. The index was fractionally lower than at the same date in 1935, when a larger gain had been indicated.

*Toronto.*—Activity increased in the textile, leather and iron and steel groups, but there was a decline in food and printing and paper establishments; among the non-manufacturing industries, transportation, construction and trade showed moderate improvement. Returns were received from 1,425 firms, employing 119,562 workers at the beginning of March, as com-

Relative Weight of Employment by Ci- ties as at Mar. 1, 1936	14.3	1.3	12.8	1.4	3.3	1.7	4.3	3.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

pared with 117,772 at February 1. The index, standing at 97·8, was higher than at March 1, 1935, when a smaller gain had occurred.

*Ottawa.*—Employment in Ottawa showed improvement; construction, manufacturing and a few other groups were rather more active, while trade released some workers. The 173 co-operating employers reported a total payroll of 13,152 at the date under review, as compared with 12,888 at February 1. The index was slightly higher than at the beginning of March, 1935, when little general change had been noted.

*Hamilton.*—A further moderate gain, on the whole, occurred in Hamilton, mainly in manufacturing, while other industries showed only small fluctuations. An aggregate payroll of 31,167 persons was reported by the 277 firms whose returns were tabulated, and who employed 30,968 in their last report. Greater improvement had been recorded at the same date of last year, but the level of employment then was lower, the index standing at 85·8 as compared with 97·1 at March 1, 1936.

*Windsor.*—A decrease was indicated in Windsor, almost entirely in manufacturing, within

which there was a falling-off in activity in the automobile and related industries. There were only slight changes in the other groups. Data were received from 171 employers with 15,993 workers, or 282 fewer than at February 1. Employment was not so brisk as at the beginning of March, 1935, when a large gain had been recorded; this difference was mainly due to a change in the active season in the motor industry, resulting from the earlier production of the year's model cars.

*Winnipeg.*—Heightened activity was noted in Winnipeg, where 463 firms reported 40,319 employees, as against 39,061 in the preceding month. There was a large increase in trade, while manufacturing, transportation, services and construction also showed improvement. Employment was in greater volume than at March 1 of last year, when a smaller gain had been registered.

*Vancouver.*—Manufacturing recorded a loss in Vancouver, mainly in lumber mills, and trade also was not quite so active. On the other hand, transportation showed improvement. On the whole, there was a decrease of 258 persons in the payrolls of the 416 co-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

Relative Weight of Employment by Industries as at Mar. 1, 1936.....	100·0	53·8	4·5	6·3	2·2	10·2	9·9	2·7	10·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

operating firms, who had 31,012 employees. An advance had been indicated at the same date of a year ago, but the index was then nearly seven points lower than that of 96.9 at the latest date.

Index numbers of employment by cities are given in Table 2.

### Employment by Manufacturing Industries

The trend of employment in this group continued favourable, according to statistics furnished by 5,581 manufacturers employing 501,370 operatives as compared with 495,690 at the beginning of February. The most pronounced recovery took place in leather, textile and iron and steel plants, but the vegetable food, pulp and paper, rubber, tobacco, chemical, clay, glass and stone, electric current and non-ferrous metal industries also showed gains. On the other hand, animal food factories were slacker. The improvement in manufacturing generally was on a smaller

scale than that noted at March 1, 1935, or, in fact, than in most of the fifteen preceding years for which statistics are available. This was largely due to the fact that employment in lumber, textiles and iron and steel at the latest date did not show such pronounced advances as are usual at the time of year; nevertheless, activity in each of these divisions was maintained at a higher level than at March 1 in any of the last five years.

The crude index in manufacturing rose from 98.5 at February 1, 1936, to 99.5 at the date under review, as compared with 92.7 at March 1, 1935, and 86.5 at March 1, 1934. After adjustment for seasonal influences, however, the index declined from 102.3 in the preceding month to 101.3 at the beginning of March. The seasonally-corrected index numbers in the last five months have been higher than in any other period since the winter of 1930-1931.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926 = 100)

Industries	Relative Weight	Mar. 1, 1936	Feb. 1, 1936	Mar. 1, 1935	Mar. 1, 1934	Mar. 1, 1933	Mar. 1, 1932	Mar. 1, 1931
<i>Manufacturing</i> .....	53.8	99.5	98.5	92.7	86.5	75.8	87.0	97.6

Iron and steel products.....	12.8	90.6	89.8	82.9	70.5	59.3	74.9	96.0
Crude, rolled and forged products.	1.5	110.6	113.9	91.8	83.1	39.6	67.0	106.8
Machinery (other than vehicles)...	1.2	98.0	95.5	85.5	71.1	63.3	81.8	99.8
Agricultural implements.....	.6	65.5	65.5	56.0	44.1	33.1	32.4	45.8
Land vehicles.....	5.9	91.3	90.3	88.4	74.6	68.8	80.7	97.0
Automobiles and parts.....	2.1	135.8	138.2	152.0	96.2	69.3	74.8	94.4
Steel shipbuilding and repairing...	.2	63.5	59.0	65.1	45.4	57.5	65.8	98.5
Heating appliances.....	.5	99.6	95.1	88.5	82.1	58.6	73.2	87.0
Iron and steel fabrication, n.e.s.....	.6	81.8	83.6	63.0	50.6	45.0	83.2	146.7
Foundry and machine shop products.....	.6	98.6	92.7	88.4	70.7	56.1	74.2	97.3
Other iron and steel products.....	1.7	85.9	85.6	77.3	70.2	57.9	76.8	91.0
Non-ferrous metal products.....	2.2	127.1	123.2	114.2	99.7	77.4	95.9	116.7
Non-metallic mineral products.....	1.4	130.2	130.3	126.7	128.3	114.1	116.2	122.6
Miscellaneous.....	.6	117.7	116.7	114.2	102.8	91.9	100.4	105.7

<sup>1</sup>The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

The following shows the unadjusted index numbers as at March 1 in the sixteen years for which statistics are now available: 1936, 99.5; 1935, 92.7; 1934, 86.5; 1933, 75.8; 1932, 87.0; 1931, 97.6; 1930, 110.9; 1929, 115.7; 1928, 104.7; 1927, 99.8; 1926, 94.9; 1925, 88.6; 1924, 93.1; 1923, 94.7; 1922, 84.5; and 1921, 91.6.

A review of the data for March 1, 1935, shows that returns had then been received from 5,355 manufacturers, whose staffs had aggregated 464,265, compared with 451,362 in the preceding month. Although the improvement then indicated had, as already stated, exceeded that noted at the latest date, the index then was lower by over seven per cent than at the beginning of March of the present year.

*Animal Products, Edible.*—Employment in this industry showed a further moderate decrease, mainly in meat-packing plants. The index number stood at 107.2, as compared with 101.7 at March 1, 1935, when similar curtailment had been noted. The working forces of the 266 reporting establishments aggregated 20,564 persons, as compared with 20,803 at February 1, 1936.

*Leather and Products.*—There was a considerable advance in employment in this division at the beginning of March, according to statistics from 293 manufacturers, whose payrolls included 22,820 persons, compared with 21,301 in the preceding month. The gains reported were mainly in footwear factories in Quebec but also to some extent in Ontario. A smaller increase had been made at the corresponding date a year ago, when the index number was nearly eight points lower than at March 1, 1936.

*Lumber and Products.*—Little general change was indicated in the lumber group. Statements were tabulated from 810 employers, whose staffs totalled 34,536 workers, compared with 34,479 at February 1. The tendency was moderately favourable in four of the five economic areas, only British Columbia showing a general reduction. The index number was higher than at March 1, 1935, when a much larger advance had been reported.

*Plant Products, Edible.*—An increase was recorded in the edible plant products group, chiefly in flour and cereal and fruit and vegetable canning factories. The firms making returns to the Dominion Bureau of Statistics, 447 in number, had 27,968 workers in their employ, or 146 more than at the beginning of February. Quebec, Ontario, and the Prairie Provinces reported improvement. A decline had been indicated at the beginning of March

last year, when the index number stood at 90.9, compared with 96.7 at the date under review.

*Pulp and Paper Products.*—Employment in this division showed a small advance, chiefly in the production of pulp and paper and paper goods, while the printing and publishing division reported a moderate loss; the changes in the various economic areas were slight. A combined working force of 58,497 persons was recorded by 593 co-operating manufacturers, who had 58,388 employees at February 1. The situation was more favourable than in the late winter of 1935, when a contraction on the whole had occurred.

*Rubber Products.*—There was an increase in employment in rubber factories, 52 of which employed 12,172 workers, as compared with 11,981 in their last report. The index number, at 95.5, was slightly higher than at March 1, 1935, when a larger advance had been indicated.

*Textile Products.*—Important increases were registered in this group, chiefly in garment and personal furnishings, headwear, hosiery and knitting factories, while cotton, woollen and silk mills were slacker. The level of employment was higher than that reported at March 1, 1935, although considerably greater gains had then been noted. The payrolls of the 990 co-operating establishments aggregated 100,076 persons, as compared with 98,713 at February 1, 1936. All provinces except British Columbia showed improvement, that in Quebec and Ontario being most pronounced.

*Tobacco, Distilled and Malt Liquors.*—Losses in employment were noted at March 1 in beverage factories, while the tobacco division showed heightened activity. The index number in the tobacco and beverage group, standing at 136.4, was higher by 16.2 points than at the same date a year ago. Data were received from 169 firms employing 17,837 workers, or 117 more than in their last report.

*Chemical Products.*—Statistics tabulated from 201 chemical plants showed that they employed 10,890 persons, compared with 10,742 in the preceding month. Employment in this industry was brisker than at March 1 of a year ago.

*Clay, Glass and Stone Products.*—There was an increase in activity in building material plants, in which employment was at a higher level than at the corresponding date in 1935. Statements were compiled from 191 manufacturers with 7,361 employees, as against 7,063 in the preceding month.

*Electric Light and Power.*—Employment in plants producing electric power showed a slight

gain, according to the 99 co-operating firms who employed 14,080 workers, compared with 13,979 at February 1. Most of the improvement occurred in British Columbia. The index number, at 111.5, was nearly six points higher than at March 1, 1935, when a slight reduction had been noted.

*Electrical Apparatus.*—Employment in electrical appliances was somewhat brisker than in the preceding month; 118 factories reported 12,806 persons on their payrolls, or 79 more than at February 1. A similar increase had been indicated at the beginning of March of last year, when the index number was nearly eleven points lower.

*Iron and Steel Products.*—Continued advances were made in the iron and steel industry, in which employment was in much greater volume than in the early spring of 1935, 1934, 1933, or 1932. Automobile and crude, rolled and forged factories registered declines, but there was an upward movement in the railway car, heating appliance, machinery, shipbuilding, foundry and machine shop and other divisions. Returns were tabulated from 842 establishments having 119,582 persons in their employ, or 1,113 more than in the preceding month. The most noteworthy expansion was in Quebec, but improvement was also noted in Ontario.

*Non-Ferrous Metal Products.*—Smelters and refineries and other non-ferrous metal industries showed heightened activity; 164 firms had 20,234 workers on their payrolls, as against 19,591 at the beginning of February. The additions to staffs were made chiefly in Ontario. The level of employment was considerably higher than at March 1, 1935, when a rather smaller gain had been indicated.

*Mineral Products, n.e.s.*—Statistics tabulated from 136 employers in this group showed a slight decrease in their forces, which aggregated 13,216. Moderate improvement had been recorded at the corresponding date a year ago, when the index number was between three and four points lower.

### Logging

There were marked seasonal contractions in logging camps, in many of which the season's operations were approaching completion; 322 firms had 41,566 men in their employ, or 7,362 fewer than in their last report. The decline involved a much larger number of workers than that recorded at the beginning of March a year ago, when the index was many points higher, standing at 166.9, compared with 147.0 at the date under review.

### Mining

*Coal.*—On the whole, employment in the mining of coal showed a reduction; moderate improvement in British Columbia was more than offset by a seasonal falling-off in the Maritime and Prairie Provinces. One hundred and two operators decreased their labour forces from 25,596 persons at February 1, to 24,939 at the beginning of March, 1936. A larger loss in personnel had been indicated at March 1, 1935, and the index number was then fractionally lower.

*Metallic Ores.*—There was an upward trend in employment in this group at the date under review. Data were received from 170 mines employing 28,168 workers, as against 27,376 at the beginning of February. The index stood at 234.9, as compared with 204.6 at March 1, 1935, when a smaller gain had been noted.

*Non-Metallic Minerals (Other than Coal).*—Curtailment was registered in these industries, according to statistics from 77 employers having 6,132 persons on their payrolls. Employment on the whole had remained almost stationary at March 1 of a year ago; the index then was decidedly lower.

### Communications

Small additions to staffs were indicated on telephones and telegraphs; returns were received from 85 companies and branches with 20,573 employees, compared with 20,453 in the preceding month. A slight decline had occurred at March 1, 1935, when employment was at practically the same level.

### Transportation

*Street Railways and Cartage.*—Statistics were tabulated from 217 employers in this division, whose staffs included 25,309 persons, as compared with 25,262 at the beginning of February. A small gain had also been noted at the same date in 1935, but employment then was in less volume.

*Steam Railways.*—An increase was registered in steam railway operation, in which 860 more workers were employed than in the preceding month: 100 co-operating companies and divisional superintendents reported 57,796 persons on their payrolls. A decline had been indicated at March 1 of last year, when the index number was nearly three points lower. Improvement occurred at the date under review in all except the Maritime Provinces.

*Shipping and Stevedoring.*—There was a slight decrease in the shipping and stevedoring group, in which employment was not quite so brisk as at March 1, 1935; at the

date under review, 107 employers reported a staff of 11,497 persons, or 94 fewer than in the preceding month. Gains were indicated at the Eastern ports and British Columbia, while the trend was downward in Quebec and Ontario.

### Construction and Maintenance

**Building.**—A contraction was reported in building activities at the beginning of March, there being losses in Quebec, Ontario and British Columbia. The 652 contractors furnishing data throughout the Dominion had 21,038 employees, as against 21,676 at February 1. The level of employment was higher than in the late winter of 1935, when no general change had taken place.

**Highway.**—Highway construction registered improvement at March 1, 1936, when 309 employers reported 41,583 workers, as compared with 40,278 at the beginning of February. Gains were indicated in Ontario and the Prairie Provinces, while there were contractions in Quebec, the Maritime Provinces and British Columbia. Employment in this group at March 1, 1935, was in greater volume than at the date under review, due mainly to the larger number then engaged on unemployment relief projects.

**Railways.**—Employment on steam railway construction and maintenance showed a pronounced increase on the whole, according to data received from 32 companies and divisional superintendents employing 29,086 persons, or 3,802 more than in the preceding month. There were increases in all provinces

except British Columbia. A small gain had been noted at the beginning of March of last winter, when the index was nearly ten points lower.

### Services

A slightly larger number of workers was employed in the service group, in which 452 establishments reported a staff of 25,324 as compared with 25,177 at February 1. Activity was greater than in the same month of 1935, when moderate curtailment in staffs had been shown.

### Trade

Retail trade reported a substantial increase, while wholesale establishments were slightly slacker; the market improvement in the former was contra-seasonal. On the whole, there was an increase of 1,343 in the personnel of the 1,205 firms furnishing data in the trade group, who had 97,578 employees. The index stood at 123.1 at March 1, 1936, compared with 116.7 at the beginning of March, 1935, when only a slight advance had been recorded in the group as a whole.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by firms making returns at the date under review.

## (2) Unemployment in Trade Unions at the Close of February, 1936

Unemployment, as used in the following report, has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are idle due to illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Activity for local trade union members at the close of February tended more favourably than in the preceding month, the slight gain shown being the first that has been registered since the end of September last year. For the month reviewed a total of 1,763 labour organizations made returns to the Department,

involving a membership of 168,853 persons, 23,310, or 13.8 per cent, of whom were unemployed on the last day of the month, in contrast with a percentage of 14.8 in January. Conditions were substantially improved from February a year ago when 18.2 per cent of idleness was reported. Moderate industrial expansion was evident among Quebec and Alberta unions when compared with January, the manufacturing industries in the former province particularly showing gains, though building and construction, and railway operation also contributed to the total advancement. In Alberta the increases were confined more specifically to the coal mines. The variation in Nova Scotia, Manitoba and Saskatchewan from January was very slight, though favourable. Retarded activity on a small scale, however, was shown by British Columbia members and in New Brunswick and Ontario the

situation remained practically unchanged, though the tendency was toward lessened employment. When a comparison is made with the returns for February a year ago, Quebec and Ontario unions maintained a much better level of activity during the month reviewed, which was more particularly marked in building and construction operations. In British Columbia, Alberta and Manitoba also, gains of moderate proportions were reflected, New Brunswick unions recording slight advancement. Saskatchewan and Nova Scotia unions alone showed some slackening in work available from February last year.

A separate compilation is made each month of unemployment among local trade union members in the largest city in each province,

fairly small. Saint John and Halifax unions, however, showed curtailment on a rather noteworthy scale from February a year ago.

From the chart which appears with this article it will be noticed that the curve during February projected in a downward direction from the previous month, an indication of a greater employment volume accorded, this being the first favourable tendency reflected by the curve since the end of September, 1935. The level for February, however, remained considerably below that of the corresponding month last year, denoting important employment recovery during the month reviewed.

The manufacturing industries, with 479 organizations reporting for February a total of

#### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

with the exception of Prince Edward Island. Montreal and Regina members during February were afforded a considerably greater volume of work than in the previous month, and in Edmonton also, improvement of more moderate degree was shown. Winnipeg unions registered slight employment advances. Halifax unions, however, showed some curtailment in available work and the recessions evident among Saint John, Toronto and Vancouver unions were of minor importance. A decidedly better situation than in February, 1935, was reflected by Montreal, Toronto, Edmonton, Vancouver and Regina unions, while in Winnipeg the employment increases recorded were

51,596 members, showed that 7,184, or a percentage of 13.9, were out of work at the end of the month, compared with percentages of 15.4 in January and 16.0 in February a year ago. The textile and carpet, and garment trades were considerably more active during February than in the preceding month and among brewery workers and metal polishers moderate increases were recorded. The tendency was also more favourable for cigar makers, iron and steel, and glass workers, and paper makers, though the variation from January was slight. On the other hand, hat and cap, leather and fur workers showed a marked slackening off in employment, and

noteworthy curtailment was indicated by general labourers. Among wood workers lesser declines occurred. Jewellery workers and printing tradesmen showed little change in conditions from January, though the tendency was adverse. Compared with the situation for February, 1935, glass, jewellery and wood workers and general labourers were much busier during the month reviewed and marked advancement was evident among paper makers, garment, and iron and steel workers, and metal polishers. Bakers and confectioners and cigar makers indicated gains of somewhat smaller

proportions, and among textile and carpet and brewery workers nominal increases in activity only were recorded. There was, however, a large drop in available work for hat and cap and leather workers from February last year and among fur workers employment was considerably retarded. Printing tradesmen also showed some slight curtailment.

Coal miners during February were afforded a slightly greater volume of employment than in either the previous month or February a year ago according to the reports received from 50 unions with an aggregate of 15,943 persons. Of these, 1,276 or 8.0 per cent, were idle at the end of the month, contrasted with percentages of 8.9 in January and 9.4 in February, 1935. Increased activity in the Alberta mines was a large factor in the better situation shown in the mining industry from January, while conditions in Nova Scotia varied slightly, though the tendency was favourable. In British Columbia a fractional decline in employment only was registered. Compared with the returns for February last year Alberta and British Columbia unions recorded noteworthy improvement during the month reviewed, while in Nova Scotia there was a slight falling off in available work. A number of members, however, continued to be employed at reduced time.

The building and construction trades showed little change in the situation during February from the previous month, though the trend was toward greater employment. This was evident from the reports furnished by 195 associations, combining a total of 19,592 members, 7,886, or 40.3 per cent, of whom were idle at the end of the month, contrasted with a percentage of 41.5 in January. Especially pronounced were the gains in activity recorded by painters, decorators and paperhangers from January, while bricklayers, masons and plasterers, steam shovelmen, and hod carriers and building labourers all showed more moderate improvement. Of the recessions which were almost sufficient to offset these gains those registered by carpenters and joiners, and plumbers and steamfitters involved the greatest number of members, though viewed from a percentage basis the most outstanding reduction occurred among bridge and structural iron workers, whose combined membership, however, was rather small. Among granite and stonecutters some slackening off in employment was apparent, electrical workers and tile layers, lathers and roofers indicating but fractional declines in activity. In the building and construction trades, as a whole, decided improvement was shown during February from the corresponding month last year when unemployment stood at 65.1 per cent, bricklayers, masons and plasterers, carpenters and joiners,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

electrical workers, painters, decorators and paperhangers, plumbers and steamfitters, tile layers, lathers and roofers, and steam shovelmen all sharing quite substantially in the total expansion. A considerable increase in slackness, however, was evident among bridge and structural iron workers and hod carriers and building labourers, and the situation for granite and stonecutters also declined.

The trend of activity in the transportation industries during February was slightly better than in either the previous month or February, 1935, as manifest by the reports tabulated from 794 organizations covering 56,940 members. Of these, 4,776, or 8.4 per cent, were unemployed on the last day of the month, as compared with a percentage of 9.2 in January and 9.9 per cent in February last year. Appreciable betterment of conditions was indicated by navigation workers than in January. Participating also in the total advance, though in slight degree, were steam railway employees, whose returns constituted over 78 per cent of the entire group membership recorded, street and electric railway employees, and teamsters and chauffeurs. As in the previous comparison all divisions of the transportation industries shared slightly in the expansion noted from February last year, the increases shown by steam railway employees affecting the largest number of members.

Employment was brisk for retail shop clerks at the end of February, the percentage of idleness standing at 1.9, as contrasted with 3.7 per cent in January and 3.8 per cent in February last year. The percentage for the month reviewed was based on the reports compiled from 4 associations, with 1,641 members.

The 76 unions of civic employees making returns, with a membership aggregate of 8,367 persons during February, showed that 417, or 5.0 per cent, were without work on the last day of the month, as compared with a percentage of 2.1 in both the previous month and February, 1935.

There was a slight gain in the volume of work afforded members in the miscellaneous group of trades during February over the previous month and improvement on a larger

scale was apparent from February a year ago. This was manifest from the returns forwarded to the Department by 118 organizations, with 5,165 members, 537, or 10.4 per cent, of whom were idle at the end of the month, compared with 11.5 per cent in January and 16.0 per cent in February last year. Theatre and stage employees were afforded a considerably better volume of work than in January, and among stationary engineers and firemen heightened activity on a rather small scale was shown. Unclassified workers, hotel and restaurant employees and barbers, however, reflected a slightly unfavourable tendency. In making a comparison with the returns for February, 1935, in the miscellaneous group of trades, hotel and restaurant, and theatre and stage employees indicated marked advancement during the month reviewed, and gains in activity of more moderate proportions were evident among stationary engineers and firemen. Unclassified workers, however, showed but a nominally adverse change from February last year, while barbers maintained the same level of employment in both months under comparison.

Fishermen reported substantial increases in available work during February from the previous month, the 3 unions making returns, with 590 members, indicating an unemployment percentage of 37.3 in contrast with 49.3 per cent in January. The situation was decidedly improved from February a year ago, when 88.5 per cent of inactivity was recorded.

Reports were tabulated at the close of February from 4 unions of lumber workers and loggers, with a combined membership of 615 persons, 14.0 per cent of whom were idle at the end of the month, contrasted with percentages of 11.6 in January and 46.3 in February a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1935, inclusive, and also the percentage of unemployment by provinces for February of each year from 1919 to 1933, inclusive, and for each month from January, 1934, to date. Table II summarises the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for February, 1936

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1936, as indicated by the average daily placements effected, showed losses of about 15 per cent from the previous month and of nearly 6 per cent from February, 1935. Declines from January were reported in farming, logging, services and construction and maintenance, of which

that in farming was by far the most pronounced. Gains were registered in manufacturing, mining, trade and transportation. In comparison with February a year ago, construction and maintenance, logging and manufacturing reported fewer placements, the largest loss being in construction and maintenance, where placement of workers on relief projects was registered. Farming showed quite a sub-

stantial gain and services one of smaller proportions, while increases in mining, trade and transportation were nominal only.

The accompanying chart shows the trend of employment since January, 1934, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Employment Service of Canada, computations being made semi-monthly. It will be noticed that the curve of vacancies and of placements in relation to applications showed only fractional variation throughout the month, the levels being slightly higher during the first half of February than during the latter half of the same month, and also during the second half of the previous month, but they were con-

the preceding month and with 1,061 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,985, as compared with 2,467 in January, 1936, and with 1,729 during February, 1935.

The average number of placements made daily by the offices of the Service during February, 1936, was 948, of which 552 were in regular employment and 396 in work of one week's duration or less, as compared with a total daily average of 1,109 during the preceding month. Placements in February last year averaged 1,006 daily, consisting of 618 placements in regular and 388 in casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

siderably lower than those attained at the close of February a year ago. The ratios of vacancies to each 100 applications were 51.0 and 49.7 during the first and the second half of February, 1936, in contrast with ratios of 59.5 and 63.4 during the corresponding periods of 1935. The ratios of placements to each 100 applications during the periods under review were 48.7 and 46.8, as compared with 56.4 and 60.0 during the corresponding month of 1935.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1936, was 1,000, as compared with 1,171 during

During the month of February, 1936, the offices of the Service referred 25,097 persons to vacancies and effected a total of 23,687 placements. Of these, the placements in regular employment were 13,787, of which 10,168 were of men and 3,619 of women, while placements in casual work totalled 9,900. The number of vacancies reported by employers was 17,732 for men and 7,251 for women, a total of 24,983, with applications for work numbering 49,618, of which 37,646 were from men and 11,972 from women. Reports for January, 1936, showed 29,270 positions available, 61,655 applications made and 27,716 placements effected, while in February, 1935, there were recorded 25,453

vacancies, 41,487 applications for work and 24,138 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1926, to date:

Year	Placements		
	Regular	Casual	Totals
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935.....	226,945	127,457	353,802
1936 (2 Months).....	31,791	19,612	51,403

#### NOVA SCOTIA

There was a decrease of over 4 per cent in the number of positions offered through Employment Offices in Nova Scotia during February, when compared with the preceding month and of nearly 2 per cent in comparison with the corresponding month of last year. Placements were over 3 per cent higher than in January, but nearly 4 per cent less than during February, 1935. The only decline of importance in placements from February last year was in the highway division of construction and maintenance and this loss was to a large extent offset by an increase in services. Minor changes, only, were reported in all other groups. Of the 913 placements made during the month, 577 were in construction and maintenance and 266 in services. Of the latter, 205 were of household workers. Placements in regular employment numbered 111 of men and 61 of women.

#### NEW BRUNSWICK

During February, orders received at Employment Offices in New Brunswick called for nearly 19 per cent less workers than in the preceding month and over 18 per cent less than during the corresponding month of last year. Placements were 18 per cent lower under both comparisons. Except for nominal gains in trade and manufacturing, all industrial groups showed losses in placements when compared with February, 1935, but the only important decline was in construction and maintenance and was due to a reduction in relief placements. During the month 112 placements were made in this group and 458 in services. Of the latter 363 were of household workers. There were 89 men and 61 women placed in regular employment during the month.

#### QUEBEC

Orders received at Employment Offices in the Province of Quebec during February called for over 9 per cent fewer workers than in the preceding month, but nearly 4 per cent more than during the corresponding month of last year. There was a decline of nearly 9 per cent in placements when compared with January, but a gain of over 5 per cent in comparison with February, 1935. There were substantial increases in placements in logging and services when compared with February of last year, supplemented by a small gain in farming. These increases, however, were partly offset by declines in all other groups, the largest being in construction and maintenance, manufacturing and trade. Placements by industrial divisions included manufacturing, 221; logging, 434; construction and maintenance, 1,267; trade, 79; and services, 1,950, of which 1,768 were of household workers. During the month 1,690 men and 1,371 women were placed in regular employment.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during February, were less than one per cent below the preceding month and 8 per cent fewer than during the corresponding month of last year. There was a nominal gain only in placements when compared with January and a loss of 8 per cent in comparison with February, 1935. There was a large reduction in bush placements when compared with February of last year and a somewhat smaller decline in manufacturing. These losses were responsible for the adverse change under this comparison, but minor declines were also reported in construction and maintenance and services. Moderate gains were reported in farming, trade, mining and transportation. Placements by industrial divisions included: manufacturing, 533; logging, 318; farming, 389; mining, 88; transportation, 71 construction and maintenance, 3,999; trade, 275; and services, 2,922, of which 1,863 were of household workers. Placements in regular employment numbered 2,054 of men and 1,116 of women.

#### MANITOBA

There was a decline of over 41 per cent in the number of positions offered through Employment Offices in Manitoba during February, when compared with the preceding month and of over 2 per cent in comparison with the corresponding month of last year. Placements also were over 42 per cent less than in January and nearly 5 per cent below February, 1935. A

large reduction in placements under construction and maintenance, supplemented by a decline in logging, accounted for the decrease from February of last year. Farm placements, on the other hand were much higher and small gains were recorded in services, manufacturing and trade. Industrial divisions in which most of the placements were effected during the month were: logging, 161; farming, 811; construction and maintenance, 457; and services, 518, of which 383 were of household workers. During the month 1,444 men and 271 women were placed in regular employment.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during February, was nearly 34 per cent less than in the preceding month, but nearly 55 per cent above the corresponding month of last year. There was a decline in placements of nearly 35 per cent when compared with January, but a gain of over 60 per cent in comparison with February, 1935. The substantial gain in placements over February of last year was due to a large increase in farm placements under the \$5 Farm Relief plan. Small gains were also reported in services, manufacturing and logging. Construction and maintenance showed the only loss of importance, as reductions in transportation and mining were quite small. Placements by industrial divisions included: farming, 1,509; construction and maintenance, 123; and services, 599, of which 411 were of household workers. During the month 1,654 men and 349 women were placed in regular employment.

#### ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during February, were nearly 27 per cent less than in the preceding month and nearly 10 per cent below the corresponding month of last year. Slightly lower percentages of loss were reported in placements under both comparisons. Placements in construction and maintenance, farming and logging were less than during February, 1935, and accounted for the decline under this comparison. These losses were offset, in part, by gains in all other groups, but none of these were large. Industrial divisions in which most of the placements were effected during the month were: logging, 188; farming, 486; mining, 65; construction and maintenance, 753; and services, 347, of which 263 were of household workers. During the month 1,345 men and 207 women were placed in regular employment.

#### BRITISH COLUMBIA

There was a decline of over 5 per cent in the number of positions offered through Employment Offices in British Columbia during February when compared with the preceding month, and of nearly 9 per cent in comparison with the corresponding month of last year. Slightly higher percentages of loss were reported in placements under both comparisons. Construction and maintenance showed the only decline of importance in placements, when compared with February, 1935, but losses were also reported in farming, mining and manufacturing. There was a substantial increase in services and small gains in trade, logging and transportation. Placements by industrial divisions included: manufacturing, 12; farming, 51; construction and maintenance, 2,543; and services, 670, of which 316 were of household workers. There were 1,781 men and 190 women placed in regular employment during the month.

#### Movement of Labour

During the month of February, 1936, the offices of the Employment Service of Canada effected 13,794 placements in regular employment 6,060 of which were of persons for whom the employment located was outside the immediate territory of the offices at which they were registered. Of the latter 484 were granted the Employment Service reduced transportation rate, 416 journeying to centres within the same province as the despatching office and 68 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Offices in Ontario issued 313 certificates for reduced transportation during February, all to provincial points. Of these, 282 were granted at Port Arthur to 138 bush workers, 104 mine workers, 37 highway construction workers, 2 fishermen and one domestic going to various centres in the Port Arthur zone. From Sudbury, 10 bushmen, 2 miners and one labourer, and from Fort William 6 bushmen were carried to employment within their respective zones. Destined to the Timmins zone were 11 bushmen travelling from North Bay, while to the Port Arthur zone one highway construction labourer was transferred from Pembroke. Workers benefiting by the Employment Service reduced transportation rate in Manitoba during February numbered 72, of whom 4 proceeded to situations within the province and 68 to other provinces. The provincial move-

ment was from Winnipeg and included transfers of 2 mine workers, one bushman and one hotel cook to points within the territory covered by that office. The Winnipeg office also arranged transfers outside the province, despatching 65 bushmen and one mine cook to Port Arthur, one hotel waitress to Estevan and one farm hand to Yorkton. On certificates issued at Saskatchewan offices during February 41 persons were conveyed to provincial employment. To points within their respective zones the Regina office assisted in the despatch of 22 teachers and one housekeeper, the Prince Albert office of 15 bushmen, the Yorkton office of 2 bushmen and the Saskatoon office of one teacher. Business transacted by Alberta offices during February involved the issue of 51 reduced transportation vouchers, these all for centres within the province. From Edmonton one painter journeyed to Calgary and 37 bush workers, 3 fishermen,

2 farm hands, 2 carpenters, one sawmill worker, one housekeeper and one cook to employment at points in the Edmonton zone. Receiving certificates at Calgary 2 farm hands and one farm domestic were carried to Drumheller. The labour movement in British Columbia during February was entirely provincial and comprised the transfer of 7 persons. Of these, 4 were tie makers going from Nelson to the Penticton zone, which zone was also the destination of one miner and one farm hand despatched from Vancouver. From Vancouver, in addition, one mine blacksmith travelled to Kamloops.

Of the 484 workers who profited by the Employment Service reduced transportation rate during February 319 proceeded over the Canadian National Railways, 152 over the Canadian Pacific Railway, 11 over the Temiskaming and Northern Ontario Railway and 2 over the Northern Alberta Railway.

#### (4) Building Permits Issued in Canada During February, 1936

The value of the building represented by the permits issued by 58 cities stood at \$1,911,844 in February, 1936; this was an increase of \$628,168 or 48.9 per cent over the total of \$1,283,716 for the preceding month, but a decline of \$1,689,753 or 46.9 per cent as compared with the aggregate of \$3,601,637 in February of last year, when authority had been granted for the erection of a large public building in one of the co-operating cities. The unusually severe weather of the present winter has retarded operations in building in many parts of the Dominion.

Some 50 cities furnished detailed statistics, showing that they had granted over 100 permits for dwellings valued at nearly \$310,000, and not quite 600 permits for other buildings, estimated to cost in excess of \$1,580,000. In January, authority was given for the erection of some 95 dwellings and 380 other buildings, estimated at approximately \$376,000 and \$556,000, respectively.

Prince Edward Island, Saskatchewan, Alberta and British Columbia reported increases in the value of the permits issued as compared with January, 1936; the greatest gain, of \$756,311 or 176.8 per cent took place in British Columbia. The remaining provinces showed declines in this comparison, that of \$80,656 or 28.4 per cent in Quebec being largest.

As compared with February, 1935, Prince Edward Island and British Columbia recorded increases; the gain in the latter was considerable, amounting to \$932,638 or 370.9 per cent. Of the decreases in the other provinces, that of \$1,957,703 or 81.7 per cent in Ontario was most pronounced.

Of the four largest cities only Vancouver reported an increase in the value of the

building authorized as compared with either January, 1936, or February, 1935. Toronto showed an improvement in the former, but a loss in the latter comparison, while in Montreal and Winnipeg the total was lower in each case.

Of the other centres, Charlottetown, Saint John, Shawinigan Falls, Westmount, Belleville, Galt, Guelph, Kingston, Oshawa, Owen Sound, Peterborough, Stratford, Sault Ste. Marie, Welland, Woodstock, Moose Jaw, Saskatoon, Medicine Hat and Victoria reported improvement over the preceding month and also as compared with the same month of last year.

*Cumulative Record for First Two Months, 1936.*—The following table gives the value of the building authorized by 58 cities during February, and in the first two months of each

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits issued in first two months (1926=100)	Average indexes of wholesale prices of building materials in first two months (1926=100)
	\$	\$		
1936.....	1,911,844	3,195,600	26.9	83.6
1935.....	3,601,637	4,484,515	37.8	81.8
1934.....	894,102	1,601,914	13.5	82.2
1933.....	925,894	2,111,856	17.8	75.2
1932.....	2,845,271	6,056,283	51.1	79.4
1931.....	6,395,659	14,797,115	124.8	83.8
1930.....	8,919,078	16,136,475	136.1	96.8
1929.....	10,465,330	18,882,210	159.2	99.6
1928.....	10,318,338	18,034,925	152.1	96.4
1927.....	7,638,176	13,314,713	112.3	97.1
1926.....	7,139,549	11,859,083	100.0	102.4
1925.....	5,902,118	11,349,388	95.7	103.2
1924.....	4,093,800	8,554,379	72.1	112.3
1923.....	5,679,671	9,819,169	82.8	110.1
1922.....	4,738,105	8,064,642	68.0	108.3
1921.....	3,683,359	6,278,923	52.9	140.5
1920.....	6,156,287	10,173,311	85.8	137.5

year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926 = 100).

The aggregate for the first two months of 1936 was lower than in 1935, but was higher

than in 1934 or 1933. The totals for January-February in these four years were lower than in any other year for which statistics for the 58 cities are available. The index numbers of wholesale prices of building materials in the last few years have also been considerably below the average for the years since 1920.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, March, 1936, summarized the employment situation as follows:—

Employment at February 24 showed a marked improvement as compared with January 20. Outdoor work in January, however, had been seriously affected by the severe weather, and the improvement at February 24 was partly due to the milder conditions prevailing at that date. The improvement was most marked in the building and public works contracting industries, and there were also substantial increases in employment in stone and slate quarrying, the clothing trades (including boot and shoe manufacture), the cotton industry, engineering, shipbuilding and ship-repairing, the tinplate industry, pottery, earthenware, etc. manufacture, brick and tile making and shipping service. On the other hand, there was an increase in the numbers temporarily stopped in coal mining, and employment showed a further decline in port transport, the distributive trades and the motor vehicle industry.

The estimated number of insured persons, aged 16-64, in employment in Great Britain at February 24, 1936, was 10,475,000. This was 126,000 more than at January 20, 1936, and 378,000 more than at February 25, 1935.

Among workpeople, aged 16-64, insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at February 24, 1936 (including those temporarily stopped as well as those wholly unemployed), was 15.4, as compared with 16.3 at January 20, 1936, and with 17.5 at February 25, 1935. In Great Britain the percentage at February 24 was 15.3 compared with 16.1 at January 20, and with 17.3 at February 25, 1935.

At February 24, 1936, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,677,077 wholly unemployed, 259,292 temporarily stopped, and 88,652 normally in casual employment, making a total of 2,025,021. This was 134,701 less than a month before and 260,442 less than a year before. The

total included 1,589,316 men, 65,564 boys, 308,357 women, and 61,784 girls. The persons on the Registers included 950,988 persons with claims for insurance benefit; 720,415 insured persons with applications for unemployment allowances; 212,480 insured persons (including 24,726 insured juveniles under 16 years of age) not in receipt of insurance benefit or unemployment allowances, and 141,138 uninsured persons.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at February 24, 1936, was 2,093,900.

### United States

*Manufacturing Industries.*—Factory employment increased 0.4 per cent between January and February, 1936, and pay rolls increased 0.1 per cent. These gains raised the level of the preliminary February, 1936, employment index to 83.3 and the February pay-roll index to 72.3.

The February, 1936, employment index compared with the index of February, 1935 (81.4) shows an increase of 2.3 per cent and the February, 1936, pay-roll index shows a gain of 4.6 per cent over the February, 1935, index (69.1).

Gains in employment from January to February were shown in 48 of the 90 manufacturing industries surveyed and increases in pay rolls were also shown in 48 industries. The locomotive industry reported the most pronounced gain in employment over the month interval (18.0 per cent). Seasonal increases in number of workers were reported in the following industries: shirts and collars (9.6 per cent), stoves (9.0 per cent), men's furnishings (7.6 per cent), cigars and cigarettes (7.3 per cent), steam and hot-water heating apparatus (4.2 per cent), men's and women's clothing (4.1 per cent each), engines, turbines and tractors (4.0 per cent), millinery (3.1 per cent), and boots and shoes (2.4 per cent).

Industries of major importance in which increases were reported were: steam-railroad repair shops (4.4 per cent), book and job printing (1.9 per cent), knit goods (1.8 per

cent), furniture (1.3 per cent), foundries and machine shops (1.2 per cent), and sawmills (1.0 per cent).

The machine-tool industry continued to absorb more workers, the gain of 1.2 per cent from January to February continuing the unbroken expansion which began in November, 1934. The February, 1936, employment index for this industry is above the level recorded in any month since October, 1930. The seasonal increase of 1.8 per cent in employment in the agricultural implement industry raised the February, 1936, employment index to 136.3, indicating a gain of more than 400 per cent in employment in this industry since the low point October, 1932. The index of employment in this industry in February, 1936, stands above the level recorded in any month since March, 1930.

Among the 42 industries in which decreases in employment were shown over the month interval, seasonal declines were reported in beet sugar (24.5 per cent), radios and phonographs (8.6 per cent), slaughtering and meat packing (3.7 per cent), and brick-tile-terra cotta (3.3 per cent). Employment in the cottonseed oil-cake-meal industry fell 8.4 per cent from January to February, in canning and preserving (7.9 per cent), and in silk and rayon goods mills 7.3 per cent.

The automobile industry, which customarily reports increased employment from January to February, showed a decline of 3.6 per cent in February, 1936, due largely to the recent shift in production schedule to an earlier period. Employment in the blast furnace, steel works, rolling mill industry in February, 1936, was 0.6 per cent below the level of January, the electrical machinery, apparatus and supplies industry showed a drop of 1.0 per cent and the cotton goods and woollen and worsted goods industries showed decreases of 0.6 per cent and 0.4 per cent, respectively, in number of workers.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-25, taken as 100. In February, 1936, reports were received from 23,762 establishments employing 3,885,645 workers whose weekly earnings were \$83,056,573. The employment reports received from these establishments cover more than 55 per cent of the total wage earners in all manufacturing industries of the country and more than 65 per cent of the wage earners in the 90 industries included in the Bureau of Labour Statistics' monthly survey.

Small gains in employment were shown in both the durable and non-durable goods groups. In the durable group, the gain of 0.3 per cent

was attributed largely to gains in railroad-repair shops while in the non-durable group the gain of 0.7 per cent was due primarily to seasonal gains in the wearing-apparel industries. The February employment index for the durable goods group (74.5) indicates that for every 1,000 workers employed in the index-base period (1923-1925=100) there were 745 workers employed in February, 1936, while the February index of employment in the non-durable goods industries (92.1) indicates that for every 1,000 workers employed in this group in 1923-25 there were 921 employed in February, 1936.

*Non-manufacturing Industries.*—Gains in number of workers were shown in anthracite and bituminous-coal mining, metalliferous mining, hotels, electric-railroad and motor-bus operation, insurance, and brokerage offices. These gains, however, were not sufficiently large to offset the losses reported in the remaining non-manufacturing industries surveyed. Based on reports supplied by 49,754 retail-trade establishments employing 776,405 workers, it is estimated that approximately 28,000 fewer employees were working in retail-trade establishments in February than in the preceding month. The major portion of this decline was in the general-merchandising group which is composed of department, variety, and general-merchandising stores and mail-order houses and in which there was an estimated decline of over 24,000 workers. The continued cold weather also caused a sharp reduction in employment in the private-building-construction industry. With the exception of the decrease of approximately 10,000 workers in wholesale-trade establishments and 2,400 workers in the quarrying and non-metallic-mining industry, the decreases in the remaining industries were not of appreciable volume.

*Private Building Construction.*—Reports received from 8,776 contractors employing 53,695 workers in February showed a decrease of 15.7 per cent in number of employees over the month interval, while pay rolls decreased 19.9 per cent. These decreases are somewhat larger than the declines shown in February of the immediately preceding years for which information is available and are attributable to reduced operations caused by the sub-zero weather prevalent in many localities during the February 15 pay period. The information furnished by reporting contractors relates to employees engaged in erecting, altering, and repairing private buildings and does not include projects financed by the Public Works Administration, Reconstruction Finance Corporation funds or regular appropriations of the Federal, State, and local governments.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Governmental supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the *LABOUR GAZETTE* for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, provided for the observance of the wages rates generally accepted as current in the district for competent workmen, or if there were no current rates, then fair and reasonable rates, and for adherence to the hours of work generally accepted as current in the district; or fair and reasonable hours. These "A" conditions, in so far as

wages and hours are concerned, were superseded in 1930 by the adoption of an Act of Parliament entitled "The Fair Wages and Eight Hour Day Act" (chapter 20-21, Geo. V), the full text of which was published in the *LABOUR GAZETTE* of June, 1930, p. 652. The clause relating to wages and hours in this Act is in the terms following:—

All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable.

The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the schedule of fair wages and working hours, Government contracts for the construction, remodelling, repair or demolition of any work contain certain other labour conditions for the protection of the workpeople employed, sanctioned by the Fair Wages Order in Council of June 7, 1922, as amended on April 9, 1924.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for

governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest, to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and

empower the Minister of Labour to deal with any disputes which may arise.

During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, Repair or Demolition)*

Supply and installation of electric lighting and power for the Filling Group, Dominion Arsenal, Valcartier, P.Q. Name of contractors, La Cie Electrique Goulet Ltee, Quebec, P.Q. Date of contract, March 4, 1936. Amount of contract, \$55,300.00. A fair wages schedule was embodied in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Electricians.....	\$0 65	8
Electricians' helpers.....	0 45	8
Labourers.....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Supply and erection of six steel stairs, four steel fire escapes, and two steel ladders in the Filling Group, Dominion Arsenal, Valcartier, P.Q. Name of contractor, Mr. J. B. Poulin, Limoilou, P.Q. Date of contract, March 4, 1936. Amount of contract, \$1,825.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Ornamental iron workers.....	\$0 55	8
Machinists.....	0 60	8
Carpenters.....	0 60	8
Cement Finishers.....	0 55	8
Labourers.....	0 40	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Erection of an Officers' Mess and Single Officers' Quarters at Calgary, Alta. Name of contractors, Smith Bros. & Wilson Ltd., Regina, Sask. Date of contract, March 13, 1936.

Amount of contract, \$105,782.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Asbestos insulation workers.....	\$0 80	8
Blacksmiths.....	0 70	8
Fireman—stationary.....	0 50	8
Machinists.....	0 70	8
Structural steel workers.....	0 80	8
Steam shovel engineers.....	1 00	8
Steam shovel cranimen.....	0 90	8
Steam shovel firemen.....	0 50	8
Hoist operators—1 drum.....	0 65	8
Hoist operators—2 drum.....	0 80	8
Cement mixer operator—gas or elec.....	0 50	8
Cement mixer operator—steam.....	0 60	8
Compressor operator.....	0 60	8
Excavator, bearcat and gas shovels.....	0 75	8
Cement finishers.....	0 60	8
Stonemasons.....	0 90	8
Stone cutters.....	1 00	8
Brick and hollow tilelayers.....	0 90	8
Structural steel erectors.....	0 80	8
Carpenters and joiners.....	0 75	8
Sheet metal workers.....	0 80	8
Sheet metal workers' helpers.....	0 50	8
Roofers, felt and gravel.....	0 50	8

Tile setters.....	0 90	8
Metal lathers.....	0 06*	8
Plasterers.....	0 90	8
Plasterers' helpers.....	0 50	8
Plumbers and steamfitters.....	0 90	8
Plumbers' and steamfitters' helpers.....	0 50	8
Electricians.....	0 90	8
Linoleum layers, waxers, polishers.....	0 60	8
Labourers.....	0 45	8
Motor truck driver and truck.....	1 50	8
Motor truck driver.....	0 50	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 45	8
Painters and glaziers.....	0 75	8
Reinforcing steel rod men.....	0 75	8
Shinglers.....	0 75	8

\*Per yard.

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week such lesser hours shall not be exceeded on this work.

#### Contracts in Group "B" (Manufacture of Supplies, etc.)

The following is a statement of contracts awarded by the Department of National Defence during the month of March, 1936, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Lecture hall seats.....	Canadian Office & School Furniture Co., Preston, Ont.
Blankets.....	The West Coast Woollen Mills Ltd., Vancouver, B.C.
Blankets.....	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
Tent Pins.....	Dowdell Lees & Co., Ltd., Hamilton, Ont.
Shirt Drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Trouser drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Socks.....	George E. Hanson, Hull, P.Q.
Tables.....	Ottawa Car Mfg. Co., Ltd., Ottawa, Ont.
Kit Bags.....	Grant-Holden-Graham, Ltd., Ottawa, Ont.
Housewives.....	Grant-Holden-Graham, Ltd., Ottawa, Ont.

Goods contracted for	Contractor
Target Frames.....	Mis-Canada Mfg. Co., Ltd., Ottawa, Ont.
Service Shirts.....	The Yamaska Garments Ltd., St. Hyacinthe, P.Q.
Canvas shoes.....	The Great West Felt Co., Elmira, Ont.
Folding forms.....	The Canadian Office & School Furniture, Ltd., Preston, Ont.
Tap soles.....	Beardmore Leathers, Ltd., Toronto, Ont.
Shaving brushes.....	T. S. Simms & Co., Ltd., Saint John, N.B.
Tent poles.....	M. N. Cummings, Westboro, Ont.

In addition to the foregoing, the Department of National Defence awarded the following contracts containing the "B" labour conditions above referred to:—

Supply and installation of kitchen and serving equipment in the Mess and Recreation Building at the Royal Military College, Kingston, Ont. Name of contractors, George R. Prowse Range Co., Ltd., Montreal, P.Q. Date of contract, March 26, 1936. Amount of contract, \$17,039.00.

Complete overhaul and modification of Bellanca Aircraft VC. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, March 24, 1936. Amount of contract, \$4,595.00

#### DEPARTMENT OF PUBLIC WORKS

##### Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Construction of a public building at Hollyburn, B.C. Name of contractors, Messrs. Baynes & Horie, Vancouver, B.C. Date of contract, March 2, 1936. Amount of contract, \$27,987.00 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 60	8
Cement finishers.....	0 75	8
Stonemasons.....	1 10	8
Brick and hollow tile layers.....	1 10	8
Stone cutters.....	1 00	8
Structural steel workers.....	1 00	8
Ornamental iron workers.....	0 75	8
Carpenters and joiners.....	0 80	8
Sheet metal workers.....	0 90	8
Roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 75	8
Marble setters.....	1 10	8
Tile setters.....	1 12½	8
Lathers, metal.....	1 00	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 62½	8
Painters and glaziers.....	0 80	8
Plumbers and steamfitters.....	1 00	8
Electricians.....	1 00	8
Labourers.....	0 45	8
Driver, team and wagon.....	1 00	8
Teamster.....	0 45	8
Motor truck driver and truck.....	1 50	8
Motor truck driver.....	0 50	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of partitions and other work in the Customs Building at Toronto, Ont. Name of contractors, Redfern Construction Co., Ltd., Toronto, Ont. Date of contract, February 21, 1936. Amount of contract, \$9,150.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters and joiners.....	\$0 80	8	40
Bricklayers and masons.....	0 90	8	40
Electricians.....	1 00	8	40
Labourers.....	0 50	8	48
Lathers—metal.....	0 90	8	40
Lathers—wood.....	0 70	8	40
Painters.....	0 75	8	40
Spray painters.....	0 85	8	40
Plasterers.....	0 90	8	40
Plasterers' helpers.....	0 60	8	40
Plumbers and steamfitters.....	0 90	8	40

Construction of a public building at Sidney, B.C. Name of contractors, Messrs. Knott & Jones, Victoria, B.C. Date of contract, March 2, 1936. Amount of contract, \$17,955.00 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	
Concrete mixer operator.....	\$0 45	8	
Cement finishers.....	0 55	8	
Stonemasons.....	0 90	8	
Stonecutters.....	0 80	8	
Brick and hollow tile layers.....	0 90	8	
Structural steel workers.....	0 90	8	
Ornamental iron workers.....	0 65	8	
Carpenters and joiners.....	0 70	8	
Sheet metal workers.....	0 65	8	
Roofers, felt and gravel.....	0 45	8	
Terrazzo layers.....	0 67½	8	
Marble setters.....	0 95	8	
Tile setters.....	0 90	8	
Lathers, metal.....	0 70	8	
Plasterers.....	0 90	8	
Plasterers' helpers.....	0 42½	8	
Painters and glaziers.....	0 65	8	
Plumbers and steamfitters.....	0 80	8	
Electricians.....	0 75	8	
Labourers.....	0 40	8	
Driver, horse and cart.....	0 55	8	
Driver, team and wagon.....	0 65	8	
Drivers.....	0 40	8	
Motor truck driver and truck.....	1 45	8	
Motor truck driver.....	0 45	8	

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of an extension to the breast-work at Anse au Griffon, Gaspé Co., P.Q. Name of contractor, Mr. Arthur Dunn, Cap

des Rosiers, P.Q. Date of contract, February 10, 1936. Amount of contract, approximately \$6,247.86. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Machinist.....	\$0 55	8
Blacksmith.....	0 45	8
Carpenters and joiners.....	0 50	8
Timbermen or cribmen (using interchangeably such tools as broad-axe, X-cut saw, hammer, adze, auger).....	0 37½	8
Teamster, team and wagon.....	0 55	8
Driver, horse and cart.....	0 45	8
Drivers.....	0 30	8
Motor truck drivers.....	0 35	8
Drill runners—machine.....	0 40	8
Boatmen.....	0 30	8
Fireman.....	0 35	8
Hoist operator—gasoline.....	0 35	8
Compressor operator.....	0 50	8
Labourers.....	0 30	8

Construction of wharf repairs and improvements at Sacre Cœur (Grosse Roche), Saguenay Co., P.Q. Name of contractors, Messrs. Jos. E. Tremblay and Hector Bouchard, both of La Malbaie, P.Q. Date of contract, February 17, 1936. Amount of contract, approximately \$10,290.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 45	8
Compressor operators.....	0 40	8
Drill runners.....	0 40	8
Driver, horse and cart.....	0 45	8
Firemen—stationary.....	0 35	8
Hoist operators—steam.....	0 55	8
Labourers.....	0 30	8
Motor truck drivers.....	0 35	8
Motor truck drivers and 1½-2 ton truck.....	1 35	8
Pile driver runners.....	0 55	8
Powdermen.....	0 40	8
Teamster, team and wagon.....	0 55	8
Timbermen or cribmen using such tools interchangeably as X-cut saws, broad axe, adze, auger, etc.	0 37½	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of an office block at R.C.N. Barracks, Esquimalt, B.C. Name of contractors, Messrs. Knott & Jones, Victoria, B.C. Date of contract, March 9, 1936. Amount of contract, \$26,000.00 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operator.....	\$0 50	8
Cement finishers.....	0 60	8
Stonemasons.....	0 90	8
Stonecutters.....	0 80	8
Brick and hollow tile layers.....	0 90	8
Structural steel workers.....	1 00	8
Ornamental iron workers.....	0 75	8
Carpenters and joiners.....	0 70	8
Sheet metal workers.....	0 70	8
Roofers, felt and gravel.....	0 50	8
Terrazzo layers.....	0 67½	8
Marble setters.....	0 95	8
Tile setters.....	0 90	8
Mastic floor layers:		
Rubbers.....	0 60	8
Spreaders.....	0 50	8
Kettlemen.....	0 50	8
Lathers, metal.....	0 70	8
Plasterers.....	0 90	8
Plasterers' helpers.....	0 50	8
Painters and glaziers.....	0 65	8
Plumbers and steamfitters.....	0 80	8
Electricians.....	0 75	8
Labourers.....	0 45	8
Driver, team and wagon.....	0 85	8
Motor truck driver.....	0 50	8
Motor truck driver with 1-2 ton truck.....	1 50	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a pile and timber protection wall at the mouth of the Fraser River, District of New Westminster, B.C. Name of contractor, Mr. R. R. Christie, New Westminster, B.C. Date of contract, March 9, 1936. Amount of contract, approximately \$6,718.75. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman.....	\$1 12½	8
Pile driver engineer.....	1 00	8
Pile driver man.....	0 90	8
Labourers.....	0 45	8
Boom man.....	0 90	8
Bridgeman.....	0 90	8
Fireman.....	0 65	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of repairs to Dredge "P.W.D. No. 13" at Sydney, N.S. Name of contractors, Sydney Foundry and Machine Works, Ltd., Sydney, N.S. Date of contract, February 24, 1936. Amount of contract, \$7,240.00. The General Fair Wages Clause was inserted in this contract.

15926—5½

Construction of repairs to the Tug "Fredericton" at Pictou, N.S. Name of contractors, Pictou Foundry and Machine Co., Ltd., Pictou, N.S. Date of contract, February 20, 1936. Amount of contract, \$6,855.00. The General Fair Wages Clause was inserted in this contract.

Construction of repairs to Dredge "P.W.D. No. 9" at Pictou, N.S. Name of contractors, Pictou Foundry and Machine Co., Ltd., Pictou, N.S. Date of contract, February 20, 1936. Amount of contract, \$16,200.00. The General Fair Wages Clause was inserted in this contract.

Dredging work in the North Arm of the Fraser River, B.C. Name of contractors, British Columbia Bridge and Dredging Co., Ltd., Vancouver, B.C. Date of contract, March 9, 1936. Amount of contract, approximately \$74,942.00. The General Fair Wages Clause was inserted in this contract.

#### *Contracts in Group "B" (Interior Fittings, Supplies, etc.)*

Construction and installation of interior fittings in the public building at New Waterford, N.S. Name of contractors, The Canadian Office & School Furniture Co., Ltd., Preston, Ont. Date of contract, March 20, 1936. Amount of contract, \$1,326.20. The "B" Labour Conditions above referred to were inserted in the contract.

Construction and installation of interior fittings in the public building at Campbellford, Ont. Name of contractors, The Valley City Seating Co., Ltd., Dundas, Ont. Date of contract, March 24, 1936. Amount of contract, \$1,296.00. The "B" Labour Conditions were inserted in the contract.

Construction and installation of interior fittings in the public building at Thorold, Ont. Name of contractors, The Canadian Office and School Furniture Ltd., Preston, Ont. Date of contract, March 10, 1936. Amount of contract, \$1,562.50. The "B" Labour Conditions were inserted in the contract.

#### POST OFFICE DEPARTMENT

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Post Office Department during the month of March, 1936, for various classes of manufactured supplies, which contracts in-

cluded in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contracts
Making metal dating stamps and type, brass crown seals, cancellers, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Making and repairing rubber stamps, daters, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Making and supplying letter-carriers' uniforms.	Workman Uniform Co., Ltd., Montreal, P.Q.
Making and supplying letter-carriers' uniforms.	Paton Mfg. Co., Ltd., Montreal, P.Q.
Making and supplying letter-carriers' uniforms.	Wilfrid Rousseau, Montreal, P.Q.
Making and supplying letter-carriers' uniforms.	Kitchen Overall & Shirt Co., Ltd., Brantford, Ont.
Making and supplying letter-carriers' uniforms.	Uniform Cap Co., Ottawa, Ont.
Making and supplying letter-carriers' uniforms.	Kaufman Rubber Co., Ltd., Kitchener, Ont.
Mail bag fittings.	Fred W. Carling, Ottawa, Ont.
Stamping machines, etc.	Machine Works, Ltd., Montreal, P.Q.
Scales.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Locks.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

#### ROYAL CANADIAN MOUNTED POLICE

#### *Contracts in Group "A" (Construction, Remodelling, Repair or Demolition)*

Construction of two steel cruisers. Name of contractors, Morton Engineering and Dry Dock Co., Ltd., Quebec, P.Q. Date of con-

tract, October 11, 1935. Amount of contract, \$182,085.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Welder.....	\$0 58	8
Angle-smith.....	0 58	8
Blacksmith.....	0 58	8
Boilermaker.....	0 58	8
Chipper and Caulker.....	0 58	8
Coppersmith.....	0 58	8
Electrician.....	0 58	8
Loftsmen.....	0 58	8
Machinist.....	0 58	8
Patternmaker.....	0 58	8
Steamfitter.....	0 58	8
Rivetter.....	0 58	8
Template-maker.....	0 58	8
Plater.....	0 58	8
Shipwright.....	0 58	8
Joiner.....	0 58	8
Moulder.....	0 58	8
Driller and Reamer.....	0 45	8
Heater.....	0 40	8
Bolter-up.....	0 40	8
Holder-on.....	0 45	8
Rigger.....	0 48	8
Crane Operator.....	0 48	8
Labourers.....	0 35	8
Painters.....	0 48	8

N.B. Where by agreement or current practice the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

In reply to a question in the British Columbia Legislature as to exemptions authorized under the Hours of Work Act in the past year, Hon. G. S. Pearson, Minister of Labour, stated the number of such exemptions to be as follows: mercantile industry, 240; lumber industry, 52; miscellaneous industries, 22; bakeries, 17; hotels, 12; laundries, 7; jewelry-manufacture, 6; contractors, 5; electrical undertakings, 5; printing and publishing, 3; garages, 2.

Explaining the reason for the exemptions in the above industries the minister's notation was as follows:—

"The majority of mercantile permits were granted for the purpose of taking annual inventory. In the lumber industry changes of sailing-dates of deep-sea shipments accounted for many of the permits; also where a major breakdown occurred permit was granted to make up part of the time lost and in order that the workers would not suffer loss in earnings. Bakery permits were granted where two consecutive days were holidays, such as Christmas Day and Boxing Day. Contractors, when pouring concrete which must be completed. Electrical undertakings due to storm damage. In all cases the Department requires employers to furnish certified complete returns showing number of employees working overtime, number of overtime hours worked by each employee, employee's regular rate of

pay, and amount of overtime pay received by each employee.

#### Canada's Tourist Trade in 1935

A preliminary estimate of Canada's tourist trade in 1935 places the total expenditures of tourists from other countries at approximately \$201,000,000 and the total expenditures of Canadian tourists in other countries at approximately \$91,000,000. The corresponding estimates for 1934 were \$130,000,000 and \$61,000,000 respectively.

It is estimated that the expenditure of tourists by automobile from the United States last year was \$131,806,000 as against \$86,259,000 the year before, and by rail and steamer from the United States \$59,109,000 as against \$34,260,000. The estimated expenditure by tourists from overseas countries was \$10,117,000 compared with \$9,455,000.

The estimated expenditure of Canadian tourists in overseas countries in 1935 was \$16,486,000 compared with \$14,272,000 in 1934; tourists by automobile to the United States \$50,206,000 compared with \$32,645,000, and to the United States by rail and steamer \$24,592,000 compared with \$13,988,000.

The favourable balance accruing to Canada on tourist trade account may, therefore, be placed somewhere in the neighbourhood of \$110,000,000 as compared with \$69,000,000 in 1934.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Transportation and Public Utilities: Water Transportation

#### MONTREAL, QUEBEC.—VARIOUS STEAMSHIP COMPANIES AND STEVEDORING COMPANIES AND THE NATIONAL INDEPENDENT UNION OF LONGSHOREMEN (ISLAND OF MONTREAL) INCORPORATED

The agreement applies to all ocean steamships coming into the harbour of Montreal under the Companies' jurisdiction.

Agreement to be in effect from April 1, 1936, to December 31, 1936, and thereafter from year to year until notice.

Preference of work to be given to members of this union. The union has the right to appoint an elected representative on the wharves. The union agrees to supply the necessary men to do the work during the period of the agreement. Walking bosses need not be union members.

Hours: both parties to endeavour to ensure that the average number of hours per week shall not exceed 48.

Work on Sundays, St. Jean Baptiste Day and Dominion Day, double time. Double time also for work during any meal hour and thereafter until discharged.

Wages per hour: from 7 a.m. to 12 noon and from 1 p.m. to 6 p.m., 65 cents; from 7 p.m. to 11 p.m., 75 cents; from midnight to 5 a.m., 85 cents. For work on nitrate, bulk sulphur, full cargoes of china clay and fertilizer, shifting bunker coal and handling cargo in refrigerators which is being transported at 32 degrees F. or lower, for grain trimming and bagging, for work performed in open 'tween deck where there is grain running in a hatch connected with this open deck, 15 cents per hour extra. (The wage rates are in all cases an increase of 3 cents per hour over the rates in effect for this work last year.)

In grain trimming and bagging, the running of grain in the pipes to be stopped while the men go down in the hold to work, two men to stand on deck during that time, if necessary.

Men ordered out to work at night must be ordered out for 7 p.m. and paid full time until

discharged or sent to work, with a minimum of one hour's time. Men ordered out on Sunday and not beginning work to be paid a minimum of one hour's pay.

Sixteen men to constitute a regular gang for loading or unloading ships except when loaded or unloaded overside of vessel when eighteen men in a regular gang. Maximum weights of slingloads to be handled by these gangs are specified and for heavier slingloads extra men are to be employed, the employers to judge the number of extra men required. The number of pieces or packages of various commodities allowed per sling is specified.

Any dispute as to the interpretation of the working conditions is to be taken up by the union's representative on the wharves with the employer, and if it cannot be settled in this way, then it will be referred to a joint arbitration board whose decision will be final. No stoppage of work to occur on account of any such dispute.

The employers and the union each agree to put up a bond of \$5,000 for their guarantee in carrying out the agreement.

#### VICTORIA, B.C.—CERTAIN STEVEDORING COMPANIES AND THE VICTORIA LONGSHOREMEN'S ASSOCIATION

Agreement to be in effect from July 25, 1935 to July 24, 1936, and thereafter until either party gives 30 days notice of change.

Preference in employment to be given to union members, the union agreeing to supply satisfactory gangs. When possible the union to be advised of the expected arrival of vessels in order to have men on hand, but the employer reserves the right of picking his own men. The employer or his foreman to decide as to the size of gangs or number of men to be employed on any particular job.

Straight time to be paid between 8 a.m. and 5 p.m., except for the noon meal hour, and except Sundays and eight specified holidays. For work at all other times, overtime rate to prevail. For working through meal hours, time and one-half to be paid until released.

Basic wage rates in the Port of Victoria to be governed by the rates prevailing in the Port of Vancouver (81 cents per hour for dock work and 85 cents for ship work, straight time; \$1.22 per hour for dock work and \$1.28 for ship work, overtime). Ten cents per hour over the basic wage to be paid to cranemen, double winch drivers, donkey drivers, hatch tenders, side-runners, holdmen and winch drivers working on lumber and piling from water, to men working on creosoted products, on coal, ballast, ore, sulphur, bulk grain, fertilizer, bone dust, lime, cement in bags and nitrate, when these commodities are in lots of fifty tons or over. Twenty cents per hour over the basic wage to be paid to boom men and sling men working on lumber and piling from water; for bulk salt, the same rate to be paid as in Vancouver. For work on high explosives and for work on damaged cargo \$1.20 per hour straight time and \$1.80 overtime. When a vessel is stranded or gets into such a position that she cannot reach port without first discharging or shifting cargo, the men employed to be paid at the rate of \$1.50 per hour straight or overtime while working

and 75 cents per hour straight or overtime while travelling or standing by.

When men are ordered for work and report and no work is provided and they are released, one, two or three hours' pay is to be guaranteed depending on the hour for which they are called out. When called out and not provided with work at the specified time, waiting time to be paid at half pay, except that if standing by on a vessel is due to a shortage of men, such time will not be paid for. Half pay for travelling time.

Any disputes which cannot be adjusted between the men and their employer are to be referred to arbitration. In no case will there be any suspension of work.

#### Quebec Collective Agreements Extension Act

The following agreements and amendments to agreements in the Province of Quebec have recently been made obligatory by Orders in Council and the terms so made obligatory are summarized in the article beginning on page 370 of this issue:

Stonecutters, Province of Quebec except Hull district.

Plumbers and steamfitters, Hull.

Longshoremen (Inland Navigation) Montreal (Amendment).

Bakers, Montreal (Amendment).

Bakery Salesmen, Quebec (Amendment).

Cloakmakers, Province of Quebec (Correction).

#### Industrial Standards Act of Ontario

The following schedule has been made binding by Order in Council and terms summarized in this issue in the article beginning on page 372.

Loggers, Port Arthur District.

#### Industrial Standards Act of Alberta

The following schedule has been made binding by Order in Council and the terms summarized in this issue in the article beginning on page 372.

Plumbers and steamfitters, Edmonton.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the same industry or business and in the same district, by Orders in Council, of two agreements which are summarized below and amendments to three other Orders in Council, a correction to another Order in Council, all of which are noted below. Notices of Application for changes in agreements already in effect under Orders in Council have appeared in the *Quebec Official Gazette* as follows: barbers, Quebec, in the issue of March 14; bakers and bakery salesmen, Quebec, and shoe factory workers throughout the Province in the issue of March 21. Notices of application for the extension of new agreements appeared in the *Quebec Official Gazette* as follows: stonecutters, Hull and district, in the issue of March 7; building trades Montreal, longshoremen (inland navigation) Montreal (correction in issue of March 28) in the issue of March 14; granite cutters throughout the Province in the issue of March 21, building trades, Quebec, and barbers of Portneuf County in the issue of March 28. Corrections to the request for the extension of the agreement affecting printing trades at Montreal appeared in the issue of March 14 and March 21.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the *LABOUR GAZETTE*, May, 1934, page 417, and amendments to the Act were summarized

in the issue of June, 1935, page 526. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and, on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless ex-

pressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the *LABOUR GAZETTE* beginning in the issue of June, 1934. Beginning with the issue of the *LABOUR GAZETTE* for July, 1935, the terms of agreements have been summarized instead of being printed in full.

**STONECUTTERS (OTHER THAN GRANITE AND MARBLE), PROVINCE OF QUEBEC EXCEPT HULL AND DISTRICT.**—An Order in Council, approved March 12 and published in the *Quebec Official Gazette*, March 14, makes obligatory the terms of an agreement between certain owners of limestone, sandstone, artificial stone and other stone quarries, except granite and marble quarries, and the association of stonecutters.

The agreement is in effect from January 1, 1936 to December 31, 1936.

The agreement is similar to the one previously in effect under Orders in Council (*LABOUR GAZETTE*, April 1935, page 322 and October page 953) with the following exceptions:

The territorial jurisdiction comprises the Province of Quebec with the exception of the counties of Hull, Gatineau, Pontiac, Wright, Labelle and Papineau.

Wage rates for planermen, apprentice planermen and sawymen are omitted. (The wage rate for stonecutters is unchanged at 50 cents per hour, and for apprentice stonecutters at from 15 cents per hour during first year to 40 cents during fourth year.) Employers may now employ handicapped workers at less wages but not more than one such man to each ten stonecutters.

**PLUMBERS AND STEAMFITTERS, HULL.**—An Order in Council, approved March 26 and published in the *Quebec Official Gazette* March 28, makes obligatory the terms of an agreement between certain plumbing and steamfitting contractors and L'Association des Employés en Plomberie et en Chauffage (The Plumbing and Heating Employees' Association).

The agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, July 1935, page 629. The period is from March 28, 1936 to March 31, 1937, and thereafter from year to year until notice.

Wages are unchanged at 75 cents per hour for journeymen, \$1.25 for master plumbers (personal services), 40 cents for improvers during the first six months, 50 cents during second six months, and from 10 cents per hour for first year apprentices to 25 cents for fourth year apprentices.

**LONGSHOREMEN (INLAND NAVIGATION), MONTREAL.**—An Order in Council, approved March

6 and published in the *Quebec Official Gazette* March 7, amends the previous Orders in Council for these workers (*LABOUR GAZETTE* July 1935, page 632, August, page 733, January, 1936, page 90, February page 200) by changing the date, before which notice must be given of any change desired, from February 1 to March 1 of any year.

**BAKERS, MONTREAL.**—An Order in Council, approved March 13 and published in the *Quebec Official Gazette* March 14, amends the previous Orders in Council for this trade by eliminating some of the employers' names and adding others, by changing the name of the union to Le Syndicat des Employés de la Boulangerie et de la Pâtisserie, Inc. (The Bakery and Confectionery Workers' Union Inc.). The territorial jurisdiction is limited to the Island of Montreal but those master bakers outside the Island of Montreal who sell part or all of their production on the Island of Montreal are also included.

**BAKERY SALESMEN, Quebec.**—An Order in Council, approved March 13 and published in the *Quebec Official Gazette* March 14, amends the previous Orders in Council for these workers (*LABOUR GAZETTE* July 1935 page 629 and February 1936, page 199) by providing that there be no reduction in the weekly minimum wage rate of \$15 for these men on account of the holidays named in the agreement.

**CLOAKMAKERS, PROVINCE OF QUEBEC.**—A correction to the Order in Council for this industry (*LABOUR GAZETTE*, December 1935, page 1156 and March 1936, page 275) states that employers paying higher than the minimum rates provided in the agreement may not reduce such higher rates during the time this agreement is in effect.

During the quarter ending March 31, a total of 12,586 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 48 of which were fatal accidents; in Schedule 2 industries 475 accidents were reported including 7 fatal cases; and 626 Crown, 11 of which were fatal, were reported during the last quarter, making in all 13,687, of which 66 were fatal.

## INDUSTRIAL STANDARDS ACT OF ONTARIO

### Agreement Recently Approved by Order in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, 1935, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the *LABOUR GAZETTE*, summaries are given in this article of the schedules which have thus been approved.

**LOGGERS, PORT ARTHUR DISTRICT.**—An Order in Council, dated March 7, 1936, and published in *The Ontario Gazette*, March 14, makes binding a schedule of wages and hours of labour on all those engaged in the logging industry in the Port Arthur Forestry Division of the Thunder Bay District.

The schedule is in effect from March 24, 1936, to October 1, 1936.

Minimum wage rates: cookees and kitchen staff \$35 per month and board; general bushmen \$37.50 and board; loaders \$40 per month and board; teamsters \$45 and board; river drivers \$2.25 per day and board. Pulpwood cutters employed on a piece-work basis to be paid \$3.50 per double cord of spruce and balsam pulpwood, \$2 per single cord of spruce and balsam pulpwood, \$6 per double cord of spruce and balsam sap-peeled wood, \$3.25 per single cord of spruce and balsam sap-peeled wood; hewed ties 12 cents each, tie peeling (wet) 2 cents each, tie peeling (dry) 3 cents each, tie skidding 2½ cents each, tie loading (by hand off the ground) 2 cents each, tie logs (eight foot) 8 cents each, tie logs (sixteen foot) 14 cents each, cutting of piling 14 cents a foot. Employees on a piecework basis may be charged a maximum of 75 cents per day for board and lodging. The Board appointed under the Act may set a rate less than the above for handicapped workers. In poor or scattered timber, the operator to give special rates to the pieceworker. There shall be no change in rates of employees now receiving higher wage rates. The wood to be scaled once a week for all pieceworkers.

All tools, goods and merchandise sold by an employer to employees must be sold at a price not exceeding the prevailing retail prices at Port Arthur.

The operators are to maintain the camp in sanitary condition as provided by Department of Health regulations.

## INDUSTRIAL STANDARDS ACT OF ALBERTA

### Schedule of Wages and Hours Recently Approved by Order in Council

THE Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the *LABOUR GAZETTE*, June, 1935, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The act provides that the Minister of Labour for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon

a schedule of wages and hours of labour for all or any class of employees in such industry and district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order

in Council in *The Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. The following is the second schedule approved under this Act, the first having been summarized in the September, 1935, issue of the LABOUR GAZETTE.

PLUMBERS, CALGARY.—An Order in Council, dated February 24, and published in *The Alberta Gazette*, February 29, makes obligatory a schedule of wages and hours of labour for all employees in the plumbing, heating and gas fitting industry employed on plumbing or steamfitting work, including plumbing, steam and hot water heating, gas fitting, pipe work and pipe installation within a zone which includes the city of Calgary and surrounding district.

Hours: 8 per day from Monday to Friday inclusive; not more than 40 hours a week except in cases of emergency, the Advisory Board to determine emergency work.

Overtime: time and one-half until midnight; thereafter and all work on Saturday after 5 p.m., on Sundays and holidays, double time. Work on Saturdays from noon to 5 p.m., time and one-half. Men required for jobbing work and emergency work on Saturday mornings, single time.

Minimum wages for journeymen: 90 cents per hour until May 1, 1936, and 95 cents thereafter. All work contracted for before February 11, 1936, of which due notice has been given to the Advisory Board on or before March 14, 1936, may be completed at a rate approved by the Board.

Journemen required on out of town work to have fare and travelling time paid by employer, and for one plumber and one steamfitter on each such job the employer will pay the board.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1936

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight as in recent months. The cost of the weekly family budget in terms of retail prices was somewhat higher, due to advances in the cost of foods, while the Dominion Bureau of Statistics weekly index number of wholesale prices was lower toward the end of March than in the previous month.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices was \$8.12 at the beginning of March as compared with \$8.07 for February. This slight advance was due mainly to higher prices for eggs though there were increases also in potatoes, beef, veal and mutton. Declines were of a minor nature, the most important being in butter, lard, rolled oats and prunes. Of the twenty-nine items included in the budget eight were higher, ten were lower and eleven were unchanged. Comparative figures for the cost of this list of foods for certain earlier dates are \$7.63 for March, 1935; \$6.67 for March, 1933 (the low point in recent years); \$11.67 for March, 1930; \$10.54 for March, 1922; \$16.92 for June, 1920 (the post war peak); and \$7.68 for March, 1914. Including the cost of fuel and rent with that of foods the total budget cost \$16.63 at the beginning of March; \$16.58 for February; \$16.10 for March, 1935; \$15.41 for June, 1933 (the low point in recent years); \$21.96 for March, 1930; \$20.96 for March, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.35 for March, 1914. Both fuel and rent were practically unchanged in March from the levels in February.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 has showed little change during the last two years. The movement in March was to slightly lower levels week by week, the index being 72.2 for the week ended the twenty-seventh as compared with 72.6 for the week ended the sixth. On a monthly basis the index number was 72.5 for February; 72.0 for March, 1935; 72.1 for March, 1934; 63.5 for February, 1933 (the low point in recent years); 95.6 for March, 1929; 98.3 for March, 1922; 164.3 for May, 1920 (the post war peak); and 64.7 for March, 1914. During the month under review the price of raw silk advanced more than 20 cents per pound recovering more than half the loss of the previous two months. The price of wheat rose about 2½ cents per bushel during the first half of the month but lost most of this gain during the last half. Production of fresh eggs increased substantially during the month and the price fell more than 15 cents per dozen. Tin and copper prices were lower but in zinc and silver little change was recorded as was the case also with the price of rubber, coffee, hogs and cattle.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of

commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment

are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

#### CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1936\* (Average prices in 1913=100)

Mar. 1936....	111	142	132	114	154	126

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

#### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

(Continued on page 382)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS  
OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

[illegible]

### AVERAGE COST OF STAPLE FOODS BY PROVINCES

[illegible]

†December only. §Kind most sold.

††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended March 27, 1936; monthly figures not yet available.

\*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 374)

## Retail Prices

Changes in meat prices were small. In beef, sirloin steak continued to slightly higher levels averaging 23.5 cents per pound in March as compared with 23.2 in February. Veal and mutton again increased also, the former being up from an average price of 14.7 cents per pound for shoulder roast to 15.1 cents and the latter from 21.8 cents per pound for leg roast to 22.3 cents. Fractional decreases occurred in the prices of fresh pork and of breakfast bacon, pork roast averaging 21.2 cents per pound and bacon 29 cents. Lard was down in the average from 17.2 cents per pound to 16.6 cents.

Egg prices at the beginning of March averaged considerably higher than in the previous month following a general decline from January levels. The fresh grades averaged 38.1

cents per dozen in March, 33.9 cents in February and 41.5 cents in January. In the western provinces large increases occurred in all localities, while in eastern provinces many declines were recorded. Creamery butter was down from an average price of 30.1 cents per pound in February to 28.7 cents in March. Prices were lower in nearly all cities. Bread and flour prices continued to show little change. Potatoes were again higher averaging \$1.35 per ninety pounds as compared with \$1.30 the previous month. Anthracite coal changed little in the average in recent months. Increases of 25 cents to 50 cents per ton in the price of coke were reported from several cities and the Dominion average price advanced from \$12.15 per ton to \$12.21. A slight increase in rent was reported from New Westminster.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16; Windsor, \$16.50; Charlottetown, \$13.40; Moncton, \$16;

Saint John, \$13.50; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$13.50; Montreal, \$14.25; Ottawa, \$16.50; Kingston, \$14.50; Belleville, \$15; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$14.75; St.

Catharines, \$14.50; Hamilton, \$15; Galt, \$16.50; St. Thomas, \$16; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$18; Timmins, \$18.75; Sault Ste. Marie, \$14.50; Port Arthur, \$17; Fort William, \$17; Winnipeg, \$19.50.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to recent changes in prices according to groups of commodities in several of these countries.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index numbers, on the base 1930 = 100, was 91.7 for February, a decrease of 0.1 per cent for the month. This decrease was due almost entirely to the lower level of cereal, meat, fish and eggs prices; textiles other than wool also were lower priced than in January.

The *Statist* index number, on the base 1867-1877 = 100, was 86.7 at the end of February, showing no change on the whole from the previous month. A decrease in food prices, except animal foods and a slight decrease in textiles prices were partly offset by slightly higher prices for minerals and sundries.

COST OF LIVING.—The Ministry of Labour's index number, on the base July, 1914 = 100, was 146 at the end of February, a decrease of one point for the month due to lower food prices. All other groups were unchanged for the month.

### France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base

July, 1914 = 100 (gold index) was 77 for February, an advance of 4 per cent for the month due to increases in animal and vegetable foods and in minerals and metals.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 103.6 for February, showing no change from the previous month's level. Except for an increase of 7.8 per cent in rubber prices, the changes in all groups were small.

COST OF LIVING.—The official index number, on the base 1913-1914 = 100, was 124.3 for February, also showing no change from the previous month.

### United States

WHOLESALE PRICES.—*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the sum total of the prices per pound of 96 commodities of common consumption, was \$9.9196 at March 1, a fall of one per cent for the month, due chiefly to lower prices for foodstuffs, hides and leather and some textile products.

*Dun's* index number, which is based on the cost *per capita* of a year's supply of commodities in wholesale markets was \$179.601 at March 1, a rise of 0.3 per cent for the month due to an advance in breadstuffs and dairy and garden produce.

(a) Average for year. (b) First of month. (c) Middle of month until August, 1933; thereafter this index number is calculated fortnightly and the figure given in this table is for the date nearest to the middle of the month. (d) Cost of weekly family food budget. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) Highest category workmen's household. (i) 10 and from 1931, 13 articles. (j) Revised index number.

TABLE II.—INDEX NUMBERS OF WHOLESALE PRICES IN CANADA AND CERTAIN OTHER COUNTRIES  
(Base figure 100 except where noted)

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month. (e) New series. (f) Sums total of the prices per pound of 96 articles of common consumption. (g) Until end of 1927. (h) Dr. Lorenz. (i) Prior to 1926, the number of commodities was 236 and from January 1926 to December 1933, 502. (j) Continued by Dun and Bradstreet, Incorporated.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Action against One Big Union not Properly Constituted

IN October, 1933, an action was brought by two individuals against the One Big Union, the Winnipeg Central Labour Council of the One Big Union and certain officers or agents of the One Big Union for an accounting by the two organizations, a refund of money improperly paid to the individual defendants, an injunction prohibiting the defendants from taking any steps to expel the plaintiffs from the One Big Union and the distribution of the assets of the organization among such members as might be entitled to them. The individual defendants applied to the Referee in Chambers to require the plaintiffs to elect as to whether they were proceeding against the One Big Union and the Central Labour Council as partnerships or as associations and to amend their statement of claim accordingly. A defendant, R. B. Russell, was ordered by the Referee to reply to certain questions and produce certain documents. The individual defendants appealed from this order and made the same application as before with regard to the plaintiff's statement of claim. On consent of the parties, the appeal and application were dismissed and the question came before the Court of Appeal. Judgment given on March 12, 1934, was to the effect that the defendant, Russell, should not be required to comply with the order as to questions and documents and that the action was not properly constituted since the statement of claim did not allege that the One Big Union and the Winnipeg Central Labour Council "were legal entities entitled to sue and be sued in their own names and although it did allege that the former of them was a partnership or association with funds or property in which the plaintiffs claimed that the members have a partnership interest and that the latter was an organization forming a part or department of the One Big Union, these allegations did not show that they were a partnership within the legal definition of the term." The appeal was therefore allowed and the plaintiffs directed to apply within twenty days to amend the statement of claim as to the parties, including the addition of representative parties. In the meantime all other proceedings were ordered to be stayed. (LABOUR GAZETTE, vol. 34, p. 387).

Thereupon, the plaintiffs applied to the Referee for an order that the plaintiffs as representatives of all members of the One Big Union, except the individual defendants and the members of the Winnipeg Central Labour Council, may sue all the members of

the Council by representatives and that the individual defendants for the purposes of the action represent and defend the action on behalf of all other members of the Council. An order in the terms of the application was granted. On appeal, it was set aside by Montague, J., on the ground that the statement of the two plaintiffs, Sykes and Moore, that they were members of the One Big Union, was denied by the defendants. He held that an action by the plaintiffs could not be gone on with until "this preliminary issue" of the right of the plaintiffs to act as representatives of the other members of the One Big Union was determined.

An appeal was then made against the order setting aside the order of the Referee in Chambers and the order of Montague, J., was reversed in part by the Manitoba Court of Appeal on January 20, 1936. Pending the appeal, however, the plaintiff, Moore, who was alleged not to be a member of the One Big Union, died, and application was made to substitute as party plaintiff, Alfred Crisp, a member in good standing. Judgment of the court was given by Trueman, J. A., with whom Dennistoun and Richards, JJ. A., concurred. Under the Manitoba Rules a plaintiff can only sue when he has the same interest as all the members of the class he claims to represent; when he is not entitled to sue on his own behalf, he cannot do so on behalf of others interested. It was pointed out, too, that there is nothing in the Rule which requires plaintiffs bringing an action on behalf of themselves and others to obtain authority to do so from the Court. The first part of the order of the Referee giving leave to the plaintiffs to bring the action as the representatives of others was therefore held to be properly struck out by Montague, J. As to the second part of the order, which was also set aside by Montague, J., the Court of Appeal reversed the judgment, holding that as the plaintiffs had been ordered by the Court of Appeal in March, 1934, to amend the statement of claim with regard to the defendants and to add parties to represent the One Big Union and the Central Labour Council, the right to this amendment should not be challenged by the defendants and it was unaffected by the error in connection with the first part. The application to substitute Crisp as a party plaintiff in place of Moore, deceased, was granted while to the defendants was reserved the right to have Moore's status to bring the action determined and in the event of it being found that he lacked the proper status, the substituted plaintiff must be struck out. Costs are to be paid to the successful party in the action.

Robson, J. A., and Prendergast, C. J. M., dissented in part from the above judgment, holding that while there was no need to obtain leave to bring an action representatively, yet the right to do so may be challenged at once by the defendant and as objection in this instance was made, the plaintiffs' status is too doubtful to authorize them to proceed with a representative action intended to be as far-reaching as the present one. Robson, J., considered that the appeal should be dismissed with costs to the defendants in the action and that leave to plaintiffs should be renewed to apply to the Court of King's Bench for amendment or addition or substitution of parties.

*Sykes et al* (plaintiffs) appellants v. *One Big Union et al* (defendants) respondents, No. 2. (1936) 1 D.L.R. 662.

#### **Claim for Wages Disallowed as Procedure under Professional Syndicates Act not Followed**

In a Quebec case, a bricklayer brought action against the construction company which employed him, and the University of Montreal, which had let the building contract, for an amount equal to the difference between the wages actually paid him and the wages calculated at the bricklayers' rate fixed in the collective agreement between the National Catholic Building Trades Council of Montreal and the defendants. It appears from the judgment that for a time the plaintiff was paid at the rate of \$1.20 per hour which was the rate fixed in the agreement of July 19, 1930. Later, he received \$1 an hour and still later he was paid at the rate of 35 cents an hour. He claimed payment after the expiration of his contract at the rate of \$1.20 for the time he had worked. The plaintiff was a member of the bricklayers' union, affiliated with the National Catholic Building Trades Council.

The building trades council was registered under the Professional Syndicates Act of Quebec and accordingly had power to enter into an enforceable agreement. The Act, however stipulates that an agreement becomes legally effective only when a copy has been deposited with the Minister of Labour. It was pointed out that there was no evidence that this procedure had been followed in the case of the agreement under consideration. In the opinion of the Court, therefore, the Professional Syndicates Act did not apply to the agreement. Mr. Justice Chase-Casgrain stated that he agreed with the decision in *Juneau v. Plamondon et Cité de Québec* (LABOUR GAZETTE, Vol. 31, p. 1052) which was to the

effect that a workman could not claim wages at a rate fixed in a contract to which he was not a party if he had agreed to work at a lower rate. The latter action was based not on a collective labour agreement but on a contract between the building contractor and the city of Quebec containing a "fair wages" schedule. Following the judgment in this case, Article 14a was added (Stat. of Que. 1930-31, c. 98) to the Professional Syndicates Act to provide that "if it be stipulated in any contract that workmen, or the members of a syndicate, union or federation of syndicates, shall receive a stated wage, such workmen or members, although not a party to the contract are entitled to the rate of wages therein stated, notwithstanding any renunciation thereto afterwards agreed upon by them." As article 14a makes an exception to the general law which permits persons to accept whatever remuneration they wish, Mr. Justice Chase-Casgrain pointed out that it must be narrowly construed and "in the present case, it ought, in the opinion of the Court, to be interpreted as applying exclusively to contracts made in virtue of" the Professional Syndicates Act in which it was inserted. To hold that the article was applicable to the case before the Court would mean applying one section of the Professional Syndicates Act to the agreement while refusing to apply another on the ground that the conditions laid down as to registration of the agreement were not fulfilled. The plaintiff's claim, therefore, was not supported by the Professional Syndicates Act.

As to Article 1029 of the Civil Code which permits a stipulation for a third party to be made in a contract when such is a condition of the contract, it was pointed out that there was nothing in the Code which prevented the plaintiff as a third party abandoning his rights under the contract and accepting a lower wage than that stipulated, which he had apparently done. Contrary to the plaintiff's statement it was not proved that he accepted the lower rate as a result of threats or intimidation on the part of the defendant.

Accordingly, the claim was disallowed and costs of the action awarded to the defendant.

*Gougeon v. Damien Boileau (ltée) et une Autre et Université de Montréal et un Autre, Mis-en-cause*, (1936) Q.R. 74 C.S. 19.

#### **Contract at Fixed Price not Affected by Collective Labour Agreements Extension Act**

A painter brought action against his employer for the sum of \$174.30 being the difference between the wages actually received

by him and the amount he claimed he should have received according to the painters' wage rate fixed by the building trades agreement made binding in Montreal by order in council under the Collective Labour Agreements Extension Act. It was admitted by both plaintiff and defendant that the contract between them had provided a fixed price for the job. According to Articles 1690, 1696 of

the Civil Code, if a contract is made at a fixed price, no additional sum may be claimed on the ground of a change in the specifications or of an increase in labour and materials unless such change is authorized in writing and agreed upon. Judgment was therefore given for the defendant, the plaintiff to pay the costs.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

ACCORDING to data tabulated in the Dominion Bureau of Statistics from 9,474 establishments, employment at the beginning of April showed a seasonal falling-off, the reported staffs aggregating 918,716 persons, compared with 933,221 in the preceding month. The statistics furnished by leading firms since 1920 show that in all but one of these years, employment at April 1 has experienced a between-seasons' contraction, ordinarily resulting from the completion of the winter's work in logging camps, before any considerable numbers of persons have been absorbed into the outdoor industries opening up in the spring and summer. The general loss at the beginning of April, 1936, rather exceeded the average decrease at that date in the years for which statistics are available, although it was smaller than the reduction indicated at the beginning of April in each of the years 1921, 1923, 1930 and 1935. The index (based on the 1926 average as 100) declined from 98.9 at March 1 to 97.4 at the beginning of April; at the same date in preceding years of the record it was as follows: 1935, 93.4; 1934, 91.3; 1933, 76.0; 1932, 87.5; 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8; and 1921, 85.1.

There was a large increase at April 1 in manufacturing, especially of textile and iron and steel products. Metallic ore mining and services also showed improvement. On the other hand, logging camps reported very decided seasonal reductions, and there were important declines in railway and highway construction and maintenance. Curtailment of a seasonal nature occurred in coal-mining, while trade also afforded less employment, partly as a result of unfavourable weather.

At the beginning of April, 1936, the percentage of idleness reported to the Department of Labour by local trade unions throughout Canada was 14.5 as contrasted with percentages of 13.8 at the beginning of March, 1936, and with 16.7 at the beginning of April, 1935. The April percentage was based

on the reports tabulated from a total of 1,778 labour organizations, including 168,712 members.

The reports for the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business transacted during March, 1936, as indicated by the average daily placements, was below that of the preceding month and also that of the corresponding month last year, construction and maintenance being the group in each instance in which the major decline was recorded. Vacancies in March, 1936, numbered 24,050, applications 51,395, and placements in regular and casual employment 22,181.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was lower at the beginning of April at \$16.33 as compared with \$16.63 for March. The decrease was due almost entirely to the lower cost of foods. Comparative figures for certain earlier dates are \$15.97 for April, 1935; \$15.41 for June, 1933 (the low point in recent years); \$21.53 for April, 1930; \$20.66 for April, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.32 for April, 1914. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 changed little during the month and was 72.1 for the week ended May 1 as compared with 72.2 for the week ended March 27 and 72.5 for the week ended February 28. On a monthly basis this index number was 72.4 for March, 1936; 72.5 for April, 1935; 71.3 for April, 1934; 63.5 for February, 1933 (the low point in recent years); 91.2 for April, 1930; 98.4 for April, 1922; 164.3 for May, 1920 (the post war peak); and 64.0 for April, 1914.

The latest statistics available reflecting industrial conditions in Canada are given in a table on page 390. The index of the physical volume of business in March was  $1\frac{1}{2}$  per cent lower than in February but nearly 9 per cent higher than in March, 1935. In the former comparison the main groups to show decline were mineral production, trade employment, carloadings, imports, exports and construction, the latter group showing only

\*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price \$1.00 per year.

†For the week ended May 1, 1936.

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending May 2, 1936 and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending April 18, March 21, and February 22, 1936, April 20, March 23, and February 23, 1935.

(7) MacLean's Building Review.

a fractional decline, while advances were recorded in manufacturing and in electric power output. Comparing March, 1936, with March, 1935, all of the above groups were higher. Information available for April shows improvement in carloadings both as compared with the previous month and with April last year. Sugar manufactured during the four weeks ended April 18 was much higher than during the previous four weeks but lower than the same period in 1935. Contracts awarded were lower both as compared with March, 1936 and with April, 1935. Wholesale prices also were slightly lower in the same comparison.

The number of strikes and lockouts on record during April was fifteen, involving 1,844 workers and causing time loss of 17,790 man working days as against twelve disputes during March, involving 1,274 workers and 12,265 days' time loss. In April last year there were fourteen disputes, involving 4,429 workers and resulting in time loss of 19,472 days. During April this year strikes of loggers on Vancouver Island, B.C., shoe factory workers, London, Ont., leather workers, Toronto, Ont., dress cutters, Montreal, P.Q., and moulders at Brantford, Ont., accounted for about eighty per cent of the workers involved and time loss incurred. Of the fifteen disputes in April, twelve were recorded as terminated, one resulting in favour of the employer, six in favour of the workers, while compromise settlements were reached in five cases. Three disputes, involving approximately three hundred workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Personnel of National Employment Commission.**

Appointed under Order in Council on May 14, the personnel of the National Employment Commission is a cross-section of national interests. As indicated by its composition, the Commission in its individual members, combines wide administrative experience with specialized knowledge in the social and economic sphere.

The chairman is Mr. Arthur B. Purvis, of Montreal, who is president and managing director of Canadian Industries Limited. As attested by directorships in various large enterprises, Mr. Purvis is one of the most outstanding industrial executives in the Dominion. In addition to prominent association with Canadian Industries Limited, he is vice-president and director of Barclays Bank (Canada) Ltd., a director of the Bell Telephone Company of Canada, Ltd., also of the Canadian Safety Fuse Co., Ltd., and the Dunlop Tire

and Rubber Goods Co. of Canada, Limited. Mr. Purvis came to Canada in 1925 after holding various responsible positions with the Imperial Chemical Industries Limited, of London, England, which company he represented in South America, Africa and the United States.

The other members of the Commission, with a brief summary of their careers, are as follows:—

Mr. A. Neil McLean, a native of New Brunswick, is a student of fiscal and trade problems, banker, and businessman. After an extensive banking and mercantile experience, he became interested in the firm of Connors Brothers, Limited, of Blacks Harbour, N.B., and in 1923 was made president of this fish products business, one of the largest of its kind in the world. In addition to heading this corporation, he is a director of the New Brunswick Publishing Company, Maritime Trust Company, Scovil Brothers, Limited, and the Fundy Marine Insurance Company.

Mr. Alfred Marois, of Quebec City, after graduating in applied sciences from Laval University, practised his profession of civil engineer in railway construction. In 1918 he joined his father's firm of A. E. Marois, Limited, shoe manufacturers of Quebec, of which he is at present the vice-president. Mr. Marois is now president of the Federation of the Chambers of Commerce of the province of Quebec, president of the Board of Trade of Quebec, director of the Canadian Chamber of Commerce, president of the Boot and Shoe Manufacturers Association of Canada; vice-president of the joint committee of the shoe industry in Quebec, vice-president of the Safety League of Quebec and former president of the Canadian Manufacturers Association (Quebec section).

Mr. Tom Moore is labour's representative on the Commission. Prominently identified with the labour movement throughout his career, he is a recognized authority on labour problems. His instinct for sound leadership brought him from the trade union ranks to the presidency of the Trades and Labour Congress in 1918. He held that office until 1935 when he was appointed to the Employment and Social Insurance Commission. He has been a member of several prominent national bodies and commissions, including the Employment Service Council, the National Research Council, and was labour's representative on the directorate of the Canadian National Railways. On several occasions he has represented the Canadian workers at the Conferences of the International Labour Organization at Geneva.

Mrs. Mary McCallum Sutherland, now of Wells, British Columbia, is the wife of a doctor in the mining district of that province.

Previous to 1922, Mrs. Sutherland was the Mary McCallum identified with the Grain Growers' Guide in the capacity of associate editor. She was known throughout Western Canada as a speaker on farm problems at all of the Grain Growers' conventions and farmers' meetings held in the three prairie provinces. Mrs. Sutherland has taken part in all social and public activities in any community where she has lived. She is recognized as one of the most effective public speakers in Canada.

Professor W. A. Mackintosh has been head of the Department of Political Economy at Queen's University since 1927. He joined that department after brilliant scholastic achievements both at Queens and Harvard. His extra-University activities have given him wide experience. For some months he worked in the Department of Labour and in the Dominion Bureau of Statistics. He made a report for the Registrar under the Combines Investigation Act into the operation of the Proprietary Articles Trade Association in 1926. Later, he did some special work for the Tariff Commission. For some years, he has been in charge of research for the Canadian Pioneer Problems Committee which has been making intensive studies of pioneer settlements in Canada, particularly in the prairie provinces, with a view to indicating some solution of the problems of certain areas. Last year, he spent in England and on the Continent where he had an excellent opportunity of studying economic conditions of different countries and the measures taken to improve them.

Mr. E. J. Young, of Dummer, Saskatchewan, from an intimate knowledge of prairie life and conditions, possesses an authoritative understanding of the problems confronting agriculture in Canada. After a short time in the teaching profession, he changed to home-steading and progressively acquired three quarter-sections which constitute his present farm. He participated actively in community affairs, and became in turn secretary-treasurer and trustee of his local school district. He was, at other times, councillor and assessor of his municipality. He took keen interest in the problems of his fellow farmers and of the country at large. As a result of this interest he was nominated as a candidate in the 1925 Federal elections and was elected to the House of Commons, where he sat as a Member until the 1935 elections. As a member of the Price Spreads and Mass Buying Commission he submitted a minority report, and emerged from that inquiry as a national figure.

Commenting on the appointment of the above personnel, Hon. Norman McL. Rogers, Minister of Labour, declared:

"I have great confidence in this new venture in nation-wide co-operation as an ap-

proach to stubborn economic problems. The personnel of the Commission has been selected with the utmost care. Each member will be able to contribute a specialized fund of knowledge and experience to the study of the complex problem of unemployment and relief. The Chairman and members of the new Commission may be assured from the outset of the full co-operation of the Department of Labour."

In his first public statement as chairman of the Commission, Mr. Purvis outlined the approach to the problem as follows:—

"The National Employment Commission has been set up by the Government to bring about the re-employment of those who would normally be self-supporting, were it not for the dislocation of trade.

"In recent years, we as citizens have been far too prone to lean upon the Government for the solution of all our problems, and have fallen into a habit of destructively criticising the Government, or the economic system—a course which can get us nowhere.

"Our Government believes, and the National Employment Commission believes, that Canadians are ready to move out of this atmosphere of doubt and criticism. More—that they are prepared to take their part in a nation-wide co-operative effort to face squarely the problems before us, and make such sacrifices as will bring about their solution.

"With this end in view the National Employment Commission will seek the co-operation of every man and woman, young and old, in a team effort to win back for all the right to a true feeling of independence."

#### **Negotiations with Provinces Respecting Relief.**

As a result of recent negotiations between the federal and provincial governments respecting relief agreements based upon the Unemployment and Relief Act 1936

(which received Royal Assent on May 7) it was announced on May 12 by the Hon. Norman McL. Rogers, Minister of Labour, that grants in aid of direct relief by the Dominion to the provinces will be continued for the months of May and June at the same rates as were in effect in April. This means that the fifteen per cent reduction (in the Dominion contribution) from the winter rates will be operative in May and June. Accordingly, the Dominion's quota to the provinces will approximate \$2,206,000 a month for the two-month period.

The new relief agreements will also provide for a review of the relief situation at the end of each quarter by the National Employment Commission and the Department of Labour. Following is the statement of the Minister of Labour under date of May 12:

"Although expanding employment has brought about an encouraging improvement in the relief situation since April 1st it has been decided to continue during May and June the revised grants-in-aid from the Dominion Government to the provinces which were announced for April.

"During the summer months it is anticipated that there will be a further improvement in the employment situation through relief works which will result from conferences which are now taking place between the Dominion and provincial governments, and through other public works for which provision has been made in the special supplementary estimates. This will be in addition to an expected increase in private employment during the same period.

"The new relief agreements with the provinces will contain a provision for a quarterly review of the relief situation by the National Employment Commission in association with the Department of Labour. It is believed that such a review at quarterly intervals will permit a more accurate check on the relief problem in the various provinces, and a corresponding readjustment of grants-in-aid to meet the changing situation.

"Preliminary discussions took place to-day regarding the works program which will be carried on in Ontario by joint action of the Ontario and Dominion Governments. Very satisfactory progress was made. Similar conferences have taken place during the past week with delegations from other provinces and agreements with these provinces are now in course of preparation."

#### **Report of Dominion Commissioner of Unemploy- ment Relief.**

In accordance with the provisions of the Relief Act, 1935, a report on its operations during the fiscal year has been submitted to Parliament. The administration of the Act is vested in the Minister of Labour, Mr. Harry Hereford being the Dominion Commissioner of Unemployment Relief. The report gives detailed relief statistics as reported by the Provinces and Federal Departments for the fiscal year up to and including February, 1936.

According to a recapitulation of relief statistics (preliminary figures) reported by provinces and federal departments, the total number of individuals assisted, including dependents, during the month of February, 1936, was 1,314,082.

In addition to a comprehensive review of relief administration under the 1935 Act, the report gives tabular summaries of Dominion disbursements under the relief legislation of 1930, 1931, 1932, 1933 and 1934. The total of Dominion expenditure (exclusive of loans and

advances) under the six relief measures as at March 31, 1936 amounted to \$204,838,007.90.

In view of the publication of a supplement with the April issue of the LABOUR GAZETTE which dealt entirely with the unemployment and relief situation in Canada, it is not considered necessary to duplicate this presentation by any detailed analysis of the Commissioner's report.

There is possibly one explanation of the statistics that should be made. In the April supplement to the LABOUR GAZETTE, the number given on relief in the month of February was 1,310,423. In the Commissioner's report this total is given as 1,314,082. Both figures are preliminary. The difference is accounted for by the receipt of additional information.

#### **"Labour Legislation in Canada, 1935."**

Under the title, "Labour Legislation in Canada, 1935," the Department of Labour has published the seventh annual supplement to the volume, "Labour Legislation in Canada as existing December 31, 1928." The new supplement follows the lines of its predecessors, and contains the texts of the various Dominion and provincial laws together with certain Orders in Council and regulations made under statutory authority. Notes are inserted in the text where necessary in interpretation of new amendments.

The substantial addition of new enactments and amendments reflects the latest trends in labour and social legislation.

In addition to detailing the legislation of the period, the report contains a cumulative index covering the contents of the basic volume and its supplements.

The main volume in this series may be obtained from the Department of Labour for one dollar, the charge for each of the seven supplements being 25 cents.

#### **Legislation concerning Collective Labour Agreements.**

Legislation concerning Collective Labour Agreements is the title of a comprehensive article of some forty pages by Miss Margaret Mackintosh of the Department of Labour in the *Canadian Bar Review* for February and March, 1936.

Part I of the article, after a brief introduction on the nature and extent of collective bargaining, deals chiefly with the statutory law on collective agreements in European countries and in Australia, New Zealand and South Africa. In most of these states, legal effect is given in some measure to collective agreements governing working conditions, and in Queensland, Western Australia, New Zealand, South Africa and Austria, the law provides for the application, on certain con-

ditions, of the operation of an agreement to all employers and workers in the industry concerned whether or not they were parties to the original agreement. Similar legislation was in force in Germany from 1918 to the beginning of the National Socialist regime in 1933.

The situation in Great Britain is outlined also in Part I. In general, collective agreements have no legal consequences in Great Britain but collective bargaining has been longer and probably more widely practised than in any other country and agreements are loyally observed. There has, however, been some pressure for legislation to permit collective agreements to be made legally binding. In 1934, moreover, a provisional Act applying to cotton weaving provided for the legalization throughout the industry of the wage-rates agreed upon by the employers' associations and trade unions.

Part II of the article is devoted to the law relating to collective agreements in Canada. This includes a statement of the relative significance of the Trade Unions Act of the United Kingdom and the Trade Union Act of Canada and an analysis of certain legal decisions involving the question of the effect of a collective agreement on the contract of employment between an employer and an individual workman. The greater part of this section of the article, however, is given up to a description of the statute law in three Canadian provinces providing for the legalization of certain terms of collective agreements.

The Collective Labour Agreements Extension Act of Quebec and the Industrial Standards Acts of Ontario and Alberta are outlined and the effect of the judicial decisions interpreting them is indicated in several cases. The attitude of employers and trade unions to the legislation is shown as definitely as possible through quotations from various bodies.

#### **Old Age Pensions in Quebec and New Brunswick.**

Old Age pension legislation providing for old age pensions in Quebec and New Brunswick will shortly be in effect. In the Quebec Legislature a Bill has been introduced and given its first reading to bring the province within the old age pensions scheme in agreement with Dominion legislation.

Prior to the prorogation of the New Brunswick Legislature, it was announced by the Hon. A. A. Dysart, Prime Minister, that old age pensions legislation would become effective on July 1. New Brunswick enacted agreeing legislation in 1930, the Act to become operative upon proclamation (LABOUR GAZETTE, October, 1930, page 1153).

Old age pensions will now be in effect in all the provinces of the Dominion pursuant to the provisions of the Federal statute.

#### **Credit Union Act in P.E.I.**

Among the measures enacted at the 1936 session of the Prince Edward Island Legislature was an Act providing for the establishment of credit unions in the province. In introducing the Bill, Hon. Mark R. McGuigan, Minister of Education, declared that "the purpose of the act is not to change the social structure of the province but merely to assist ordinary people to solve their own financial problems."

He also believed that credit union organizations would promote thrift. Describing such a union as a "bank of credit," he considered that it would provide its members with immediate constructive loans, encourage buying on a cash basis and break up the installment plan system.

The Bill defined a credit union as a "co-operative credit society organized for the twofold purpose of promoting thrift among its members and creating a source of credit for its members at legitimate rates of interest for provident and productive purposes."

#### **Canada Shipping Act in effect on August 1.**

By recent Order in Council the Canada Shipping Act, with some minor amendments, will be proclaimed in effect on August 1. This Act, after extensive study and investigation, was amended and revised during the Parliamentary session of 1934, and was to come into effect on proclamation of the Governor in Council. (The events leading up to the revision of the Act and those sections which dealt with its labour provisions were reviewed in the LABOUR GAZETTE for July, 1934, page 629).

In moving leave to introduce the Bill to amend the Act, the Hon. C. D. Howe, Minister of Marine, explained that this extensive piece of legislation (it contains some 719 clauses) though passed in 1934 was not yet in operation "due to the fact that it was considered advisable to allow the shipping interests of Canada reasonable time to become familiar with the changes proposed, and also to enable the Department of Marine to prepare the regulations called for by the act."

He added that the amendments now proposed "are not very extensive, and are largely for the purpose of clarifying the intent and meaning of the 1934 measure and rendering it more effective in its application to the existing situation."

### Work of the National Research Council in 1934-35.

The activities of the National Research Council of Canada are reviewed in the eighteenth annual report of that body, covering the year ending March 31, 1935. In a summary of the Council's

operation during its eighteen years existence, it is stated that during that period the total public expenditure has been approximately \$8,000,000. Of this amount "more than half has been for permanent work, expressed in building and equipment, and remains a permanent investment for the country." The balance represents current expenditure in the eighteen years. During that period, the report points out that 152 researches have been completed, some of major economic importance. Approximately 100 are now being carried on, some of which are nearing completion, while others will extend over a considerable period of time.

Over 500 scientific papers have been published in Canadian and foreign journals as the result of the work of the staff of the Council and subventions granted to university laboratories. In addition, 382 men have been trained or are training under the scholarship system inaugurated by the Council. Further, every university in Canada where facilities for research exist has been stimulated to participate actively in the study of the scientific problems related to the development of natural resources.

Emphasizing the national importance of the Council's service, the report declares:

"It can be said without fear of contradiction that the National Research Council has already returned to the people of Canada in economic benefits far more than the total expenditure, both current and capital, made to date, and this with the current expenditure reduced to such an extent that if further reductions were made the laboratories would of necessity in part cease to function."

Drawing attention to the emphasis placed on research in other industrial countries, with which Canada competes in the world's markets, the report points to the government support accorded in Japan with its 45 research institutes "reaching into every phase of national industry"; to Russia with its 840 research institutes and 47,900 trained personnel; and to the "slower but equally sure development" in Great Britain.

Some idea of the spheres of activity in the Council's research work is indicated in the various chapters of the report.

The scope of its investigations and studies is revealed in the reports of the laboratory division—biology and agriculture, chemistry,

physics and engineering, etc. and in the reports of joint associate committees, associate committees and assisted researches.

Reference is again made to the relation of the Council to industry in the solution of problems.

### Insurance of Non-manual workers in Great Britain.

workers\* whose remuneration exceeds the present limit of £250. Reporting on this question, which has been considered at various times during the past few years, the Committee found that the demand for the raising of the non-manual limit has grown during the depression years.

The Committee point to the anomalies arising out of the present system, particularly in differentiating between manual and non-manual workers. "The typist who strikes the keys of a typewriter, or a computer who strikes the keys of a calculating machine, are held to be non-manual, while a compositor striking the keys of a linotype or monotype machine is held to be manual."

There were also a number of anomalies arising out of the fact that the limit is taken to be remuneration at the rate of £250 per annum. In other words, the limit is not based on annual earnings but at a rate equivalent to £250 a year, however short the period of employment, and in consequence the limit excludes from insurance many people whose work is irregular, so that they are paid at relatively high rates by the week or the hour, but who never expect to earn £250 a year or anything near it; they may have lower incomes and more unemployment than many of those covered by insurance. This excludes from insurance actors, musicians, variety artists, and casual workers who receive high hourly rates but whose work is intermittent.

After discussing various alternatives the Committee suggest a new limit of £400 a year. They were of the opinion, however, that the extension of unemployment insurance in this way would entail the establishment of special employment exchanges in some at least of the principal cities to serve those who would be brought into insurance by the raising of the remuneration limit.

\*All manual workers are at present insured.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of April a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was established by the Minister of Labour to deal with a dispute between the Winnipeg Electric Company and certain of its employees being members of Locals Nos. 1037 and 435 of the International Brotherhood of Electrical Workers. The original application in this matter was received in the Department in November, 1935, and a revised application on March 23, 1936 (see *LABOUR GAZETTE* April, 1936, page 309). The employees directly concerned, 50 in number, desire to enter into a new agreement with the company providing for cancellation of the wage reductions previously made. Members of the Board have been appointed by the Minister as follows: on the company's recommendation, Mr. C. A. Clendening, of Winnipeg, Manitoba; on the employees' recommendation, Mr. Fred Bancroft, of Oakville, Ontario. Messrs. Clendening and Bancroft have been requested to confer looking to a joint recommendation for a third member, who will be chairman of the Board.

It was reported in the April issue of the *LABOUR GAZETTE*, page 309, that an application for the establishment of a Board of Conciliation and Investigation had been submitted by employees of the Corporation of the City of Edmonton in street railway service, being members of Division 569, Amalgamated Association of Street and Electric Railway Employees of America. The application was defective in certain respects, and on April 27 an amended application was received in the Department from these employees. The new application was under consideration at the close of the month.

In the April issue of the *LABOUR GAZETTE*, page 309, there appeared the text of the findings of the Board of Conciliation and

Investigation which dealt with a dispute between the Hamilton Street Railway Company and certain of its employees being members of Division No. 107, Amalgamated Association of Street and Electric Railway Employees of America. The report of the Board, which was signed by the chairman, His Honour Judge Mahon, and the member nominated by the employees, Mr. Fred Bancroft, recommended an increase of 4 cents an hour to all employees concerned in the dispute, with a 44-hour week for operators of one-man cars and buses, instead of the prevailing 40 hours. The Department has been advised that both the employees and the Hydro Electric Power Commission of Ontario, which controls the street railway, have accepted the Board's recommendations as a settlement of the dispute.

Reference was made in the December issue of the *LABOUR GAZETTE* (page 1089) to the receipt in the Department of Labour of an application for a Board of Conciliation and Investigation from employees of the Dominion Transport Company, Ltd., at Toronto, Ontario, being members of Local Union No. 670, International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers. The applicants claimed that the officials of the company had not acknowledged the copy submitted to them of a proposed agreement involving increased wages, shorter hours and improved working conditions. Sixty employees were stated to be directly affected, and 20 indirectly. Officers of the Department interviewed officials of the company in Toronto and in Montreal on various occasions, and as a result of their intervention direct negotiations took place between the parties concerned which resulted in an agreement being reached on March 28. The application was subsequently withdrawn by the employees.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

**R**EPORTS have been received of three cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the *LABOUR GAZETTE*, January, 1936, page 25, and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to

December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board), to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

**Case No. 122.—Sleeping, Dining and Par-lour Car Department (Central Region)**

This case, concerning the complaint of an ex-business car steward in regard to his seniority status, was heard at the May, 1933, meeting and was later withdrawn by joint request of the disputants.

**Case No. 167.—Transportation Department (Western Region)**

This case concerned the claim of certain freight shed employees at Port Arthur for wages and conditions of employment as set forth in the schedule for "Clerks and other Classes of Employees."

The case was to be heard on February 19, 1935, but before that time it was referred back to the parties for further negotiations.

At the request of the employees, the Board withdrew the case.

**Case No. 173.—Operating Department (Western Region)**

An employee entered the Railways' service as a call boy at North Battleford, Saskatchewan, on October 31, 1926, and held that position continuously since that date, with the exception of one month in 1928 when he was laid off and two other occasions when he was employed as car checker for short periods. This employee received all scheduled increases as they became due until he reached the salary of \$45 per month on May 1, 1928. From 1928 to 1934 he did not receive any further increases.

On September 17, 1934, a claim was made on his behalf for the schedule rate of \$50 per

month, with retroactive pay from May 1, 1927, and on October 8, this claim was amended to read as from January 1, 1929. The Railway applied the schedule rate of \$50 per month retroactive to August 1, 1934.

The employees contended that according to Article 13, effective August 1, 1929, this employee should have received \$50 a month from January 1, 1929, to August 1, 1934. The employees further contended that Article 16, Section (d), which states that the settlement of a dispute shall not involve retroactive pay beyond 45 days, does not apply to this case as no dispute exists.

The company's contention was that as application for the \$50 rate was made on September 17, 1934, and as the company granted the rate from August 1, 1934, they had fulfilled their responsibility under Article 16, section (d).

The case was heard on November 19, 1935, and referred back to the disputants. A satisfactory settlement has since been reached and the case withdrawn.

**New Brunswick Forest Operations Commission**

The New Brunswick Forest Operations Commission, established on April 3, 1934, for the purpose of fixing minimum wage scales in the lumbering industry (LABOUR GAZETTE, 1934, page 418), has recently announced the following rates:—

1. For stream driving the average rate of wages paid by any employer to his employees shall not be less than Two Dollars per day and board or its equivalent in the case of piece work provided however that the wages paid to cooks shall not be included in determining the average rate.

2. For Booming and Sorting the minimum rate shall be twenty cents per hour without board, provided however where board is furnished by the employer the amount charged for same shall not exceed fifty cents per day.

Employers have to submit their payrolls to the Commission for auditing when necessary. In determining an average rate, the wages of foremen, book-keepers and clerks are not included as these workers do not come within the jurisdiction of the Act.

A Bill covering State Health Insurance is now being considered by the New York State Legislature. This bill would establish a system covering all persons (including dependents) earning \$60 a week or less. It would be financed by contributions equal to 6 per cent of the wages paid to the insured employees, 1½ per cent of which would be paid by the State and the remaining 4½ per cent divided between employers and employees.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1936.

THE following table shows the number of disputes, workers involved and time loss for April, 1936, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Apr., 1936.....	15	1,844	17,790
*Mar., 1936.....	12	1,274	12,265
Apr., 1935.....	14	4,429	19,472

\*Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The figures as to the number of disputes, the number of workers involved and as to time loss show increases in April over those for March, but only six of the disputes involved fairly large numbers of workers and caused time loss of over 1,000 days, namely those involving loggers at Cowichan Lake, B.C. (two disputes), shoe factory workers, London, Ont., leather factory workers, Toronto, Ont., dress cutters at Montreal, P.Q., and moulders, etc., at Brantford, Ont. The first three of these were also in progress in March, being the only disputes of importance during that month. In April last year, while the number of disputes was smaller, the number of workers involved and the time loss were greater as a result of a one day strike of millinery workers in Montreal which involved 1,400 workers and a strike of coal miners at Corbin, B.C., which caused 5,000 days' time loss. Strikes of millinery workers at Toronto and boom log workers at Vancouver also caused considerable time loss.

Seven disputes, involving 960 workers, were carried over from March, and eight disputes commenced during April. Of these fifteen disputes, twelve terminated during the month, one resulting in favour of the employer, six

in favour of the workers, while compromise settlements were reached in five cases. At the end of April, therefore, there were on record three disputes recorded as strikes or lockouts, namely: two strikes of loggers at Cowichan Lake, B.C., and truck drivers, helpers and warehouse employees, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to three such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A dispute involving five to seven dress cutters in one children's clothing establishment in Montreal from March 13 to the end of March has been reported to the Department. The International Ladies' Garment Workers' Union claimed that several cutters were dismissed for joining the union and picketed the establishment. The employer stated that several cutters were dismissed for unsatisfactory work and were replaced three days later. No settlement of the dispute has been reported.

A strike of women's clothing factory workers (cloaks and suits) in one establishment in Toronto, from March 17 to March 24, was recently reported to the Department. The dispute involved 45 employees and resulted in the employer conceding the workers' demand for an agreement as to wages and working conditions with the International Ladies' Garment Workers' Union. This dispute followed immediately after the cessation of work in a number of such establishments from March 5 to March 9, noted in the LABOUR GAZETTE for April, 1936, page 313.

A cessation of work on April 21 by men engaged in land clearing as a relief project by the city of Port Arthur has been reported in the press but particulars have not been received. The men objected to a piece work system of payment, claiming the rates

were too low, and demanded payment by the hour.

A cessation of work on April 25 by thirty-seven carpenters on one job in Toronto, demanding punitive overtime rates for work on Saturday afternoon has been reported in the press. It is stated that the employer refused to pay overtime rates as the carpenters had not worked forty hours during the week and that there was, therefore, no overtime. The strikers were replaced.

A cessation of work during March by employees in a bakery in Montreal, P.Q., was noted in the April issue of the *LABOUR GAZETTE*. Reports from the parties to the dispute, received later, state that from three to five bakers ceased work from the third of March to the thirteenth, demanding that only members of the International Union of Bakery and Confectionery Workers would be employed. This was finally conceded.

A minor dispute in March involving two restaurant workers in one establishment in Toronto has been reported. The Hotel and Restaurant Employees' International Alliance demanded that none but union members were to be employed. This being refused one employee ceased work on March twenty-fifth and one on the twenty-seventh. Apparently these were replaced but no settlement of the dispute has been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

**LOGGERS, COWICHAN LAKE, B.C.**—The strike of loggers in one camp of a lumber company, which commenced March 10, against the discharge of two employees, alleged to be for union activity, was unteminated at the end of the month, the employer being reported to have refused to negotiate with the union representatives. The sawmill of the employer was reported to be operating on logs purchased from small independent logging firms operating in timber patches too small for the outfits of the logging companies. The strikers were members of the Lumber Workers' Industrial Union but this union has been transferring its membership to the Lumber and Sawmill Workers' locals of the United Brotherhood of Carpenters and Joiners of America, in accordance with the policy adopted by the Workers' Unity League in 1935 and applied by the various central bodies and local unions affiliated with it. It was announced that a general strike of loggers in Vancouver Island would be called on May 5 if the employer refused to negotiate.

The sympathetic strike of loggers in another camp of the employer near Cowichan Lake was reported as still in effect.

**LOGGERS, BLIND RIVER, ONT.**—A strike of loggers employed by a contractor for a lumber company, demanding payment of wages due on March 30, was noted in the April issue of the *LABOUR GAZETTE*. Further reports indicate that the men ceased work on March 21 and work was resumed on April 2 when arrangements for payment were made. Later in the month it was reported in the press that the men were leaving their employment as money for the next pay period was not available.

**SHOE FACTORY WORKERS, LONDON, ONT.**—The strike of employees in one establishment, for the restoration of wage reductions of fifteen per cent made during the past three years and a closed shop agreement with the Canadian Shoe Workers' and Allied Crafts, which commenced on March 12, was terminated by direct negotiations on April 18, an increase in wages of  $7\frac{1}{2}$  per cent being made but a union agreement was refused. The union reported that increases for the lowest paid workers later on were promised and that recognition of the union was granted, with the possibility of a closed shop after one year.

**LEATHER FACTORY WORKERS, TORONTO, ONT.**—The strike of employees in eleven establishments manufacturing handbags, etc., on March 17, for union recognition and wages increases of twenty per cent, terminated April 8. An agreement between the International Pocket Book Workers' Union and the Ladies' Handbag Manufacturers' Association was signed providing for the closed union shop, the forty-four hour week and time and one-quarter for overtime. The agreement provides that the wage scale is to be fixed by arbitration, the board to consist of a representative of each party and a third member chosen by these two, or by the Minister of Labour for Canada if they did not agree. The result of the arbitration has not been reported. The agreement is outlined elsewhere in this issue.

**TRUCK DRIVERS, HELPERS AND WAREHOUSE EMPLOYEES, TORONTO, ONT.**—The strike of employees in one establishment, March 31, was reported as unteminated at the end of April but a number of the strikers resumed work for the moving period apparently under a temporary arrangement pending negotiations for an agreement between the union and the Toronto Cartage and Warehousemen's Association.

**COAL MINERS, SYDNEY MINES, N.S.**—Employees in one colliery ceased work on April 20, conditions as to shovelling coal, loading "dirty" coal, etc., being in dispute. The points in dispute were settled between officers of

the Amalgamated Mine Workers of Nova Scotia and the management on the next day and work was resumed on April 22.

**BAKERY DRIVERS, TORONTO, ONT.**—The bread wagon drivers employed in one establishment ceased work on April 9, the management having refused to meet a committee of the Bread Salesmen and Helpers' local of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers to discuss a proposed increase in wages. The union had requested a minimum of \$22.00 per week and an increase in the commission on certain sales. A minimum of \$20.00 per week with the increase in commission being granted, work was resumed on April 13.

**HAT FACTORY WORKERS, BROCKVILLE, ONT.**—A number of the employees in one establishment ceased work from April 6 to April 20 in protest against a new system of wage payment alleged to reduce earnings. The employer stated that adjustments would be made as the new system was tried out for two weeks and these would be made retroactive. Negotiations after the cessation of work did not result in a settlement. A representative of the Department of Labour reached Brockville on April 16 and on the eighteenth a settlement was reached. Adjustments in some of the rates being agreed upon with provision for such further adjustments as seemed suitable, work was resumed on April 20.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESS CUTTERS), MONTREAL, P.Q.**—The dress cutters in about 150 shops ceased work on April 22, their demand for an agreement with the International Ladies' Garment Workers' Union having been refused by the members of the Montreal Dress Manufacturers' Guild. Other employees in these shops, stated to number between 8,000 and 10,000, were, therefore, indirectly affected. An agreement between the Montreal Dress Cutters' Union and the employers had expired in August, 1934. A number of the employers were reported to have applied for individual contracts with the union. By April 25 the terms of an agreement between the employers' association and the union had been drawn up, subject to ratification, and work was resumed in most of the large shops on April 28. Most of the smaller shops were reported to have accepted the terms of the agreement by the end of the month. The agreement provides for higher wages: \$30 per week for skilled cutters, \$20 for choppers and \$15 for apprentices; the forty-four hour week, overtime not to exceed eight hours, no work on Saturday afternoon. The parties to the agreement were to apply to the Minister of Labour for the Province of Quebec for the

extension of the agreement to all dress factories in Montreal under the Collective Labour Agreements Extension Act.

**FURNITURE FACTORY WORKERS (CHESTERFIELD), TORONTO, ONT.**—Employees in one establishment ceased work on April 4, alleging that the employer was violating the agreement by having goods made in other shops. The employer stated that the goods in dispute were purchased samples. Work was resumed on April 7 when it was agreed that no contracting out would be done and that any dispute of this kind would be referred to arbitration. The employees were members of the Upholsterers, Carpet and Linoleum Workers' International Union, the local having been transferred by arrangement from the Furniture and Chesterfield Workers' Industrial Union, affiliated with the Workers' Unity League, which has had agreements with various chesterfield shops in Toronto since August 6, 1933.

**MOULDERS, ETC., BRANTFORD, ONT.**—Moulders, core makers, furnace men, labourers, etc., in one establishment ceased work on April 1 against a ten per cent reduction in wage rates. After negotiations between the management and a committee of the employees the question was referred to the head office of the company. The representatives of the strikers conferred with the Mayor and the member of Parliament for Brantford, the latter taking up the matter with the Department of Labour at Ottawa. On his return to Brantford he arranged for a meeting between the management and the strikers' committee and a settlement was reached, the wage cut being cancelled. Work was resumed on April 9.

**RESTAURANT WORKERS, TORONTO, ONT.**—Cooks, waiters, etc., in one restaurant ceased work for one day, April 1, demanding an agreement with the Hotel & Restaurant Employees' International Alliance providing for increases in wages for the lower paid employees, also the nine-hour day, six days per week instead of twelve hours per day, seven days per week. Work was resumed when an agreement was signed providing for these terms.

**RESTAURANT WORKERS, TORONTO, ONT.**—Employees in the kitchen of a cafeteria in a manufacturing establishment ceased work from April 7 to April 24 demanding an agreement with the Hotel & Restaurant Employees' International Alliance providing for the eight-hour day instead of eleven and one-half hours per day, and \$1 per week wage increase. The employees in the factory informed the management that they would not patronize the restaurant until a union agreement was signed. This being done, work was resumed.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1936\*

Industry, occupation and locality	Number of em- ployees involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to April, 1936.</b>			
<b>LOGGING—</b>			
Loggers, Cowichan Lake, B.C...	140	3,500	Commenced Mar. 10, 1936; against discharge of workers; unterninated.
Loggers, Cowichan Lake, B.C...	120	3,000	Commenced Mar. 20, 1936; in sympathy with loggers on strike from Mar. 10, 1936; unternminated.
Loggers, Blind River, Ont.....	140	140	Commenced Mar. 21, 1936; for payment of wages due; terminated April 1, 1936; in favour of workers.
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, London, Ont.....	200	3,000	Commenced Mar. 12, 1936; for increased wages and closed union shop agreement; terminated April 18, 1936; compromise.
<i>Fur, Leather, etc.—</i>			
Leatherfactory workers (handbags, etc.), Toronto, Ont....	275	1,925	Commenced Mar. 17, 1936; for union recognition and increased wages; terminated April 8, 1936; compromise.
Fur collar and cuff workers, Toronto, Ont.....	50	500	Commenced Mar. 23, 1936; for reduction in hours (forty hour week); lapsed during April, 1936; in favour of employer.
<b>SERVICE—</b>			
<i>Business, etc.—</i>			
Truck drivers, helpers, warehouse employees, etc., Toronto, Ont.....	35	600	Commenced Mar. 31, 1936; against discharge of workers and for increased wages; unternminated.
<b>(b) Strikes and Lockouts commencing during April, 1936.</b>			
<b>MINING, ETC.—</b>			
Coal miners, Sydney Mines, N.S.	70	140	Commenced April 20, 1936; change in working conditions; terminated April 21, 1936; compromise.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakery drivers, Toronto, Ont.	60	120	Commenced April 9, 1936; for increased wages and union recognition; terminated April 11, 1936; compromise.
<i>Textiles, Clothing, etc.—</i>			
Men's felt hat factory workers, Brockville, Ont.....	51	561	Commenced April 6, 1936; against reduction in wages; terminated April 18, 1936; compromise.
Dress cutters, Montreal, P.Q.	500	3,000	Commenced April 22, 1936; for union agreement; terminated April 30, 1936; in favour of workers.
<i>Other Wood Products—</i>			
Furniture factory workers (chesterfield), Toronto, Ont.	20	40	Commenced April 4, 1936; alleged violation of agreement; terminated April 6, 1935; in favour of workers.
<i>Metal Products—</i>			
Moulders, etc., Brantford, Ont.	165	1,155	Commenced April 1, 1936; against reduction in wages; terminated April 8, 1936; in favour of workers.
<b>SERVICE—</b>			
<i>Business, etc.—</i>			
Restaurant employees, Toronto, Ont.....	11	11	Commenced April 1, 1936; for union agreement with increased wages and reduced hours; terminated April 1, 1936; in favour of workers.
Restaurant employees (kitchen help), Toronto, Ont.....	7	98	Commenced April 7, 1936; for union agreement with increased wages and reduced hours; terminated April 23, 1936; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES.

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1936, in the review of Strikes and Lockouts in Canada and Other Countries, 1935. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in March was 64 and 15 were still in progress from the previous month, making a total of 79 disputes in progress during the month, involving 33,100 workers with a time loss of 195,000 working days for the month. Of the 64 disputes beginning in March, 13 were over demands for increased wages, 3 over proposed wage reductions, 18 over other wage questions, 2 over questions respecting working hours, 12 over questions respecting the employment of particular classes or persons, 9 over other questions respecting working arrangements and 4 over questions of trade union principle; 3 disputes were due to sympathetic action. Settlements were reached in 51 disputes during the month, of which 10 were settled in favour of workers, 29 in favour of employers and 12 resulted in a compromise. In 6 other disputes, work was resumed pending negotiations.

A strike of 2,000 slate quarrymen and labourers at Blaenau Festiniog began on March 16 for a complete restoration of the 1932 wage scale.

### Irish Free State

The number of disputes beginning in the year 1935 was 99 and involving 147 establishments and 9,513 workers. The time loss was 288,077 working days for the year. Of the 99 disputes beginning in the year, 36 were over wages questions, 23 over the engagement or dismissal of workers, 7 over trade union ques-

tions or refusal to conclude a collective agreement and 23 over other matters relating to collective bargaining; the remaining 6 disputes did not concern collective bargaining. The industries most seriously affected by time loss during the year were the railway, tram and omnibus and the furniture and woodworking industries. During the year 98 disputes terminated, of which the workers' claims were wholly admitted in 33, admitted in part in 35 and rejected in 15; while employers' claims were successful in part in 5 disputes and rejected in 2; in the other 8 disputes, the result was indeterminate.

### France

A strike of 11,000 taxi drivers out of a total of 14,000 in the city of Paris, is reported on April 22, in protest against rate cuts and to secure a guarantee of minimum wages.

### Netherlands

The number of disputes in existence in the year 1935 was 152, involving 588 establishments and 12,290 workers with a time loss of 248,500 working days for the year. The results of the disputes show that workers were successful in 46 per cent of the disputes, unsuccessful in 16 per cent and a compromise settlement was reached in 33 per cent of the strikes of the year.

### Sweden

For the year 1934, the number of disputes reported was 103, involving 427 establishments and 13,588 workers with a time loss of 760,000 working days.

### United States

The number of disputes beginning in February was 100, and 90 were still in progress from the previous month, making a total of 190 disputes in progress during the month, involving 91,000 workers with a time loss of 826,000 working days for the month.

At San Francisco, 1,600 longshoremen were on strike for a week. On April 21, through federal government mediation, a compromise settlement was reached by which employers agreed to continue to use the union's hiring halls, while the union agreed not to refuse to handle cargo pending the reference of any dispute to a federal government arbitrator.

## LABOUR LEGISLATION IN MANITOBA, SASKATCHEWAN, BRITISH COLUMBIA AND ONTARIO IN 1936

### Manitoba

During the recent session of the Manitoba Legislature which opened on February 18 and closed on April 7, 1936, the Act dealing with the recovery of wages was revised and statutes relating to workmen's compensation, unemployment relief and taxation of wages were amended.

#### Recovery of Wages

The Wages Recovery Act, which repeals the Masters and Servants Act, re-enacts a number of provisions of that statute amended to accord with modern practice. The terms "master" and "servant" are replaced by "employer" and "employee" and the sections of the old Act dealing with apprentices, which had become obsolete, are omitted. The sections laying down the procedure to be followed for the recovery of wages before a justice of the peace are similar to those of the old Act. A new clause provides that where the complaints of two or more employees are determined on the same day and sums of money are ordered to be paid to the employees by the same employer, one distress warrant may be issued covering all such sums, the employees sharing in the proceeds in proportion to the amount of their claims.

#### Workmen's Compensation

Amendments to the Workmen's Compensation Act gave effect to recommendations contained in the majority report of the Committee appointed pursuant to a Resolution of the Legislature on March 29, 1935. This report was outlined in the *LABOUR GAZETTE* for April, 1936, at p. 306. The amendments are generally similar to provisions in the Ontario Workmen's Compensation Act. The amending Act provides for compensation to workmen who contract silicosis as a result of employment in mining, or in iron, steel or metal foundries in Manitoba. For this purpose the Workmen's Compensation Board is authorized to provide a separate fund, to be known as the "Silicosis Fund," maintained by assessments on employers in such industries. The Board must keep separate accounts in such fund for each industrial group included. If a workman contracting silicosis was employed at or immediately before the date of disablement in any of these industries, the disease is to be deemed to be due to the nature of the employment, unless the contrary is proved, but, except where the

Board is satisfied that the disease is not due to any other cause than his employment in Manitoba, no compensation, medical aid or burial expenses are payable unless the workman was a resident of the Province for at least five years preceding his first disablement and was actually exposed to dust containing silica while employed in such industries in Manitoba for periods amounting in all to at least five years.

A workman employed in Manitoba for at least five years prior to May 1, 1936, who has been exposed during that time for at least five years to silica dust in the industries covered by this amendment, and any workman who hereafter becomes eligible for compensation for silicosis as set out above and who becomes disabled to a greater extent than 20 per cent by uncomplicated silicosis may be compensated as for other industrial diseases but where he is disabled from silicosis complicated with tuberculosis to a greater extent than 20 per cent, he may be entitled to compensation for total or partial disability on the basis of 50 per cent instead of 66⅔ per cent of his average earnings. If, however, it can be shown that the workman had silicosis or tuberculosis prior to the five years specified, no compensation is payable, or if it can be shown that he was exposed earlier to silica dust elsewhere than in Manitoba, the amount of compensation must be reduced by the proportion which the period he has been exposed in his work elsewhere bears to the total period of exposure. A workman ceasing to be employed in the mining or foundry industry in which he was exposed to silica dust must establish his claim within one year after leaving such employment or within six months after the passing of the Act, whichever period is longer, after which time the claim is barred. The Workmen's Compensation Board is authorized to appoint a permanent medical board of three members to deal with silicosis claims so as to determine the cause and extent of the injury.

Persons employed in mining or iron, steel or metal foundries, at an occupation where silicosis may be contracted must comply with the provisions of the Public Health Act and the regulations made under it. Regulations issued in January, 1931, were given in the *LABOUR GAZETTE* for February, 1931, at p. 197. They require workers employed underground in mines for more than 50 hours per calendar

month to hold medical certificates. Similar certificates are required for persons employed above ground in ore- or rock-crushing operations unless the ore is kept constantly moist. The amending Act provides further that no person now employed in mining or in iron, steel or metal foundries at an occupation where silicosis may be contracted is eligible for compensation for silicosis unless a claim is made within two years from the time at which his last examination showed him to be free from such disease. The Workmen's Compensation Board is authorized to make agreements with the Government or any persons for the purpose of carrying out the provisions of the Public Health Act and of the regulations regarding the examination of workmen and applicants for employment in the occupations concerned.

A change was made in the section providing that the Workmen's Compensation Board might, by regulation, exclude or include any industry within the scope of the collective liability system. The new section provides that an industry employing less than a stated number of workmen may be excluded from a class and so from the collective liability system but it is stipulated that an employer or workman in that industry may, on application to the Board, have his industry restored to the class and the employer made liable for contributions to the Accident Fund.

The amending Act gives to the Board power, under the Lieutenant-Governor in Council, to establish and maintain a fund, or enter into arrangements with one or more insurance companies or with the Annuities Branch of the Department of Labour of the Dominion Government, for the payment of superannuation allowances to members of the Board and its employees, and to make regulations providing for contributions to the fund by such members and employees and the terms upon which allowances are to be payable. The cost of maintaining and administering the fund is to be chargeable to the Accident Fund.

### Unemployment Relief

The Unemployment Relief Loan Act, 1933, which empowers the Provincial Government and the municipalities to borrow money to meet the cost of relieving distress and unemployment, was amended to continue it in force until April 30, 1937.

### Taxation of Wages

The Special Income Tax Act passed in 1933 was amended to increase the amount of wages which entitled a married person to

exemption from the payment of the two per cent tax on wages. Exemption is now granted to a married person receiving fifty cents an hour, four dollars a day, \$100 a month or \$1200 a year or less. Under the original Act, a married person receiving forty cents an hour, \$3.20 a day, \$80 a month or \$960 a year or less was exempt. The amount of wages entitling a single person to exemption is unchanged but a single person may be exempt as if he were a married person if he has resident with him a dependent brother. Formerly, only a dependent parent or sister entitled a single person to exemption. The amendment provides further that, if a widow or widower has resident with him or her a dependent son or daughter under 21 years of age, he or she is exempt from the tax if his taxable income is less than \$1200 a year. The amending Act is retroactive to January 1, 1936, but applies only to the tax levied and refunds payable in respect of wages earned after that date.

### Chauffeurs

The Taxicab Act, 1935, providing for the regulation of taxicabs in Greater Winnipeg was amended by two Acts. Under one, the Board may vary the terms of the section relating to wages and hours provided hours do not exceed those fixed by the Act and wages are not less than the statutory minimum. Formerly, the Board might only exercise such powers when conditions changed. The second Act stipulates that a taxicab driver employed otherwise than by the week is to receive the minimum wage of \$1.40 for each day he is "on duty" instead of for each day he "works" and the Taxicab Board is authorized to define the expression "on duty." Extra payment for time on duty in excess of four hours per day is to be at the rate of 35 cents per hour instead of 30 cents as formerly.

### Child Welfare

In the revision of the Child Welfare Act, 1924, the sections relating to mothers' allowances were slightly amended. For the purpose of determining the eligibility of a child for an allowance, the time spent by the father in a mental hospital is to be deemed to include time on probation under the Mental Diseases Act. The residence qualification was amended to stipulate that a child who has resided in the province for two consecutive years immediately prior to the death or to the total and permanent disablement of the father is eligible for an allowance if the father did not know at the commencement

of such period that he was suffering from the disability which subsequently caused his death or total disablement. A new clause provides that where both parents of a child are dead and the child is otherwise eligible for an allowance, he is to be dealt with as a "neglected child" and cared for by the Director of Child Welfare or by a children's aid society under the Act except as to his maintenance. The latter is to be provided for by an allowance and no order may be made against the municipality for his maintenance until the child is no longer entitled to such allowance.

Some changes were made, also, in sections of the Act relating to the employment of children. The employment of children as performers at entertainments may be regulated by municipal by-law through a licensing system, as the work of children in street trades has been in the past. Licences are, however, subject to certain conditions laid down in the Act. Formerly, the Director of Child Welfare could give a permit to a child over ten for such public entertainment if he was satisfied as to the provision for the child's health and kind treatment. Under a municipal by-law, licences may not be granted to a girl or to a boy between 12 and 14 years of age without the parent's consent in writing.

The clause defining a "neglected child" to include a child under 16 who is employed between 10 p.m. and 6 a.m. was amended to raise the age to 18 years and fix the hours at 9 p.m. to 6 a.m., thus bringing it into line with the general prohibition of such employment which was contained in the 1924 Act. In the case of the offences of habitually employing a child under 18 years of age between 9 p.m. and 6 a.m. or of employing a child under 16 in any occupation likely to be injurious to his life, health, education or morals, the new Act omits the provision for a prison term which might be imposed under the old statute in default of payment of a fine.

Three Bills of labour interest were introduced but failed to pass. A Bill to amend the Minimum Wage Act would have included domestic servants within the scope of the Act. A Bill to amend the Shops Regulation Act would have authorized municipal by-laws for a weekly half-holiday to require the closing of shops between 12 o'clock noon and midnight, instead of between 12 noon and 6 p.m., and also to classify shops and fix different closing days for different classes. A Bill respecting Sanitary and Heating Craftsmen would have made provision for an association of such persons to regulate conditions in the trade.

## Saskatchewan

The Saskatchewan Legislature during its session which opened on February 6 and closed April 1, 1936, enacted a number of laws of labour interest including a new statute dealing with unemployment relief, revision of the law providing for minimum wages and amendments to acts relating to inspection of mines and factories, weekly rest-day, weekly half-holiday and vocational education.

### Unemployment Relief

The Direct Relief Act, 1936, enables the council of a municipality, subject to such conditions as may be laid down by the council and approved by the Minister of Municipal Affairs, to grant relief to any indigent person who has acquired a residence in the municipality or to any other indigent person within the municipality. Every person who has lived in a municipality for at least one year and each member of his family and other dependent who has not acquired a separate residence is deemed to be a resident of the municipality until he has acquired a residence in another municipality or has removed from the Province and been absent for one year.

Any period during which such person was not self-sustaining is not to be included in the computation. Where a person has not resided continuously in any municipality for a period of one year during the three years preceding his application for relief, he is deemed to be a transient.

A municipality granting aid to an indigent who is not a resident may recover the sums expended from the municipality of which such person is a resident. At the request of the council of the latter municipality such indigent is to be returned to it and the cost of removal may be recovered from that municipality. An indigent refusing to return to the municipality where he has a residence may be removed thereto by a constable or other official on the order of a police magistrate or two justices and the cost of his removal recovered from the said municipality. No municipality or person may transport an indigent from one municipality to another for the purpose of transferring the burden of relief except on the request of the other municipality. If an indigent person is transported from one municipality to another for such purpose the latter municipality, unless

the person transported is a resident, may recover from the first municipality the sums paid for his relief. A municipality of which an indigent person is a resident may recover from such person sums paid by it to another municipality for his relief and may take security from him for payment.

Municipal councils may provide for medical and hospital care of an indigent person who has not acquired residence and who is receiving aid under the Act, and may recover the sums paid from such person or his municipality of residence in the same manner as other sums. The Minister of Municipal Affairs is authorized, and is deemed always to have been authorized, to provide for medical and hospital care of an indigent transient, and may take security from him for repayment of the sums expended. The Minister may also make regulations for the carrying out of the Act. The provisions of the Act supersede those of any other Act in case of conflict.

The Relief Act, 1935, was amended to extend the period of its operation to March 31, 1937, and to provide an additional method of repaying relief debentures which are made payable within twenty years instead of ten. Provision is also made whereby the Lieutenant-Governor in Council, instead of authorizing the Provincial Treasurer to acquire relief debentures of a municipality, may authorize him to make a loan to such municipality and to take security for such loan. Agreements for the relief of necessitous persons between the provincial Government and cities, towns and villages which are authorized by the Act may now relate not only to such persons within these places but to any needy persons.

The Relief Act, 1932, was amended to permit the Provincial Treasurer to accept a lower rate of interest on debentures issued by a municipality in favour of the province than the original rate agreed upon. This provision is retroactive to the commencement of the Act (April 13, 1932).

The Municipalities Relief Act, 1936, and amendments to the Local Improvement Districts Relief Act make further provisions for direct relief and assistance to distressed persons in rural areas.

### Minimum Wages

The Minimum Wage Act was consolidated and amended. As before, the Act applies to female employees in shops and factories in cities, and the Board is empowered, with the approval of the Lieutenant-Governor in Council, to extend its provisions to other portions of the Province and to male em-

ployees in any class or classes of shops or factories or in any shop or factory to which the Act applies. "Shop" is defined to include not only the part of a building where goods are offered for sale by retail but also all other parts of the building used in connection with the sale by retail and, also, a mail order house, hotel, boarding or rooming house with five or more beds for lodgers, a restaurant where meals are served daily to more than five persons, a refreshment room, beauty parlour, barber shop and the place of business of a tobacconist or news agent. No change is made in the constitution of the Minimum Wage Board of five members but the new Act stipulates that three members of the Board shall constitute a quorum. Under the former Act the Board was given power "to establish standards of minimum wages, of hours of employment, and, subject to the provisions of the Factories Act and the Public Health Act, of sanitary conditions and requirements for such employees, to determine what number or proportion of the employees in a shop or factory may be apprentices, and for the purposes of this section to make all necessary orders. The new statute is more specific in stating the powers of the Board with respect to wages and hours and omits the reference to the Public Health Act and the determination of sanitary conditions. The Board may fix, subject to the provisions of the Factories Act, the maximum hours of labour for any class of employees and the minimum wage for such employees working the maximum hours. The Board may also fix the minimum wage for those working short time and for those working overtime with the permission of the secretary of the Board. The Saskatchewan Factories Act limits the hours of women and young persons employed in factories to 48 hours a week but in case of accident or emergency, the factory inspector may permit overtime on not more than 36 days of the year up to a maximum of 12½ hours a day and 72½ hours a week. No woman may be employed in such case between the hours of 10 p.m. and 7 a.m. Under the Minimum Wage Act, overtime may be permitted subject to the restrictions imposed by the Factories Act. The maximum price which an employer may charge an employee for board and lodging and the minimum time to be allowed for meals may also be fixed. Finally, the Board may determine what number or proportion of employees in any shop or factory may be apprentices, learners or inexperienced employees. An Order of the Minimum Wage Board is to come into effect on a date named in the Order which must be gazetted twice. Under

the original Act, an Order went into force thirty days after being gazetted.
